Abstract

Minerals published during the period 2006 to 2010 from the area of Slovak Republic are described in this paper. The descriptions of 237 mineral species including 5 elements, 65 sulphides and sulphosalts, 3 halides, 36 oxides and hydroxides, 18 carbonates, 14 sulphates, 34 phosphates including arsenates, vanadates and 62 silicates are given. Most of them were identified by electron microprobe and X-ray powder diffraction.
