Jan Wagner, National Museum, Prague

STERNBERGIANA is an international, open access monographic series, publishing extensive palaeontological works and catalogues. Its name refers to Kašpar Maria Sternberg (1791 – 1838), a world-renowned Czech palaeontologist and co-founder of the National Museum Prague.

STERNBERGIANA is issued irregularly, either online only or both in print and online. Its editorial board and publishing format are the same as for the main series of Fossil Imprint.

Foreword

In the first edition of the catalogue, we placed a foreword written by a doyen of the family, Zdeněk Sternberg, with whom we shared an interest in the person of Kašpar Sternberg.

Zdeněk Sternberg was a generous man, who had exceptionally open mind. I had the pleasure of meeting him several times – a remarkable man, who although persecuted during communist regime, was always very positive about establishing good relations with everyone he met. That was also the case with us coming to the Český Šternberk castle to get more information about the family. He welcomed us and gave us a personal tour of the castle ... he knew every corner of the castle quite well, and showed us various details from the time of his childhood that survived the communist occupation period. The family called Kašpar Sternberg ‘uncle Kašpar’, and Zdeněk told us a family story about how his great-great-grandfather Leopold first met Kašpar Sternberg. He was a young man with no particular interest in natural sciences, but Kašpar started to talk to him in Latin, probably to show him the importance of Latin as an international communication language. The young man did not know Latin, and did not understand a word of Kašpar’s speech. He was startled, but fondly remembered this incident his entire life. Leopold did not continue in palaeobotany, but was active in the local coal and iron ore industries. Together with his other activities, this gave him enough money that his son (also named Zdeněk) was able to buy back the Český Šternberk family castle from the Somssich family. In 1948, the family again lost the castle, due to the communist regime ‘nationalizing’ all private holdings, and after the collapse of the communist regime in the late 20th century, the family once again re-acquired their property into private ownership.

Since the time of Kašpar Sternberg, the National Museum and the Sternberg family have been in a special relationship. In the Museum’s early days, the family helped the Museum; when communists were in power, the Museum helped the family, e.g., to care for the family burial chamber in Stupno. We helped Zdeněk arrange a small exhibit of fossil plants in the castle in the room that he has dedicated to Kašpar, furnished with the original furniture from the Sternberg library in the Březina castle.

The last time I met with Zdeněk Sternberg was during our joint journey to Regensburg, together with representatives of the National Museum, to the vernissage of the exhibit on Kašpar Sternberg in the Stadt Museum in 1998. We organised the exhibit first in Prague, then in Regensburg. It showcased the personality of Kašpar Sternberg in the context of the time and society. With support from the Czech-German Foundation, we showed the life of Kašpar Sternberg as an excellent example of good Czech-German collaboration. I particularly remember the ceremonial of requiem served for Kašpar Sternberg, which was organised by our German colleagues in the Regensburg church.

When the manuscript of the second edition was ready for submission, we received the sad news that Zdeněk Sternberg had passed away, at 97 years of age. All honor to his memory.

Jiří Kvaček

Abstract

This Catalogue is the second revised and expanded edition of the first edition, published in 1997 by J. Kvaček and Straková. The material presented in the original edition was completely nomenclaturally revised and newly photo-documented. This second edition provides as much updated information as it was possible to acquire. The Catalogue includes and reviews new nomenclatural and taxonomic assignments of Sternberg's type material and taxa published after 1997. It is clear that much of the impulse to conduct this new research came from the first edition of the Catalogue, as the community realized the type material is available for study.

In summary, the second edition of the Catalogue comprises specimens that are types of 82 genera, 3 subgenera, 535 species and 14 varieties described by Kaspar Maria Count Sternberg and his collaborators: K. B. Presl and A. C. J. Corda. The type material of 32 genera, 233 species and 5 varieties is housed in the National Museum, Prague. The types of 79 species and 4 varieties have been located in other European museums. The rest of the type specimens are currently missing – destroyed, lost, or of unknown repository. For available specimens, more detailed taxonomic, stratigraphic and geographical information is provided. All cases are noted where names in Sternberg's works have priority over names currently used, although the current names may be more widely known. Only two nomenclatural acts are published in the present work; they are designations of a lectotypes for *Aspleniopteris difformis* STERNB. and *Cycadites salicifolius* C.PRESL in Sternberg.

Preface

In the year 2020 we celebrated 200 years of scientific palaeobotany, and 200 years since issuance of the first part of the Sternberg Flora der Vorwelt. Unfortunately, the planned conference of the International Organisation of Palaeobotany, which would have celebrated this important jubilee in Prague in September 2020 did not take place, due to the world pandemic. This catalogue was planned to be a part of the celebration, so we decided to issue it anyway, as a small substitute for the planned celebration. It will provide at least a symbolic salutation to Kaspar M. Sternberg, who is considered one of the founders of scientific palaeobotany. His seminal work, “Versuch einer geognostisch-botanischen Darstellung der Flora der Vorwelt” (abbreviated usually as Flora der Vorwelt) is well-known through the palaeobotanical community as the starting point of palaeobotanical nomenclature. This significant anniversary is why we decided

to issue the catalogue symbolically near the end of the year 2020¹, that being close to the date of the formal date of issue of the first part of Flora der Vorwelt on December 31, 1820.

We do not exaggerate when we state that Flora der Vorwelt by Kaspar M. Sternberg, “Petrefactenkunde” by Ernst F. Schlotheim and “Histoire de végétaux fossiles” by Adolf T. Brongniart form the fundamentals of scientific palaeobotany (Andrews 1980). Andrews (1980) in his book states: “Two great studies mark the beginning of what has often been called “the scientific” period in palaeobotany: Adolf T. Brongniart Histoire des végétaux fossiles and Kaspar Sternberg’s Flora der Vorwelt.”

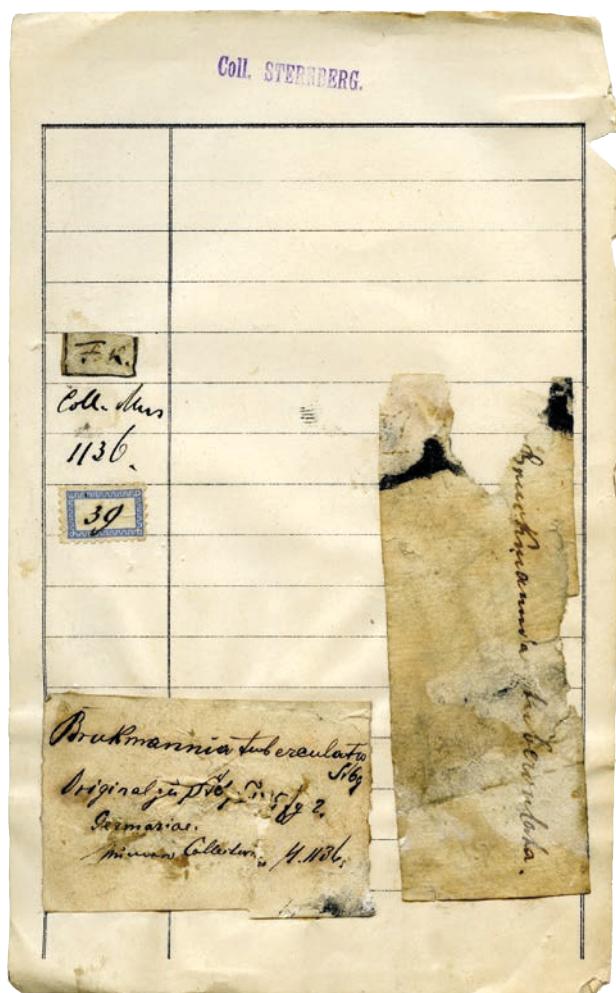

Sternberg, being equipped with a botanical background, took a significantly different approach to fossil plants than his contemporaries. For the first time on a larger scale in palaeobotany, he used the Linnean system of classification, ordered in natural hierarchies. Each taxon below genus was designated with a distinct Latin diagnosis and an illustration or reference to an earlier published fossil plant. In that way, each taxon was associated with its type. In his approach, he did not consider fossils as “Petrefacta” but as real fossil plants, that lived once in nature.

This book is the second revised edition of earlier issued work (J. Kvaček and Straková 1997), providing a more complete overview of the type collection that is distributed over Europe. We located Sternberg’s type specimens in principal European museums, and also in smaller collections of Universities. In total, we contacted more than twenty collections where we anticipated to recover Sternberg’s type material. The book is organised in several parts. After the preface, there is a critical list of genera designated by K. M. Sternberg and his collaborators. It is followed by list of species that are listed in alphabetical order of their epithets. We paid attention to their nomenclature, and tried to bring to the readers’ attention all older and more extant revising papers, to provide as much correct understanding of each of them as possible, using standards defined by the Shenzhen Code (Turland et al. 2018) and several on-line resources, particularly the International Index of Fossil Plant Names (IFPNI 2020), International Index of Plant Names (IPNI 2020) and Plant Fossil Names Registry (PFNR 2020).

Sternberg’s collection – the principal resource for Flora der Vorwelt

The type and figured material described by Kaspar M. Sternberg and his collaborators Karel Bořivoj Presl (written usually as Carolus Presl) and August Carl Josef Corda belongs to the most precious part of the palaeobotanical collections in the National Museum, Prague. The largest part of Sternberg’s original collection contains specimens which were treated by Sternberg in his work “Versuch einer geognostisch-botanischen Darstellung der Flora der Vorwelt” (abbreviated hereafter as FVW). The importance of this collection increased in 1957, after the Eighth Botanical Congress in Paris, when the formal date of issue of the first part of Sternberg’s Flora der Vorwelt (December 31st, 1820) was declared as the starting point of palaeobotanical nomenclature.

In his time, Sternberg’s collection was very large and scientifically important, as stated by Humboldt (Nebeský

The labels were transferred to the card when the specimens were prepared for museum exhibition in the end of the 19th century. Archive of the National Museum.

¹ Due to the world pandemic, the date of its issue is March 2021.

Text-fig. 2. Museum label from the end of 19th century (NCM number rewritten in the bottom right).

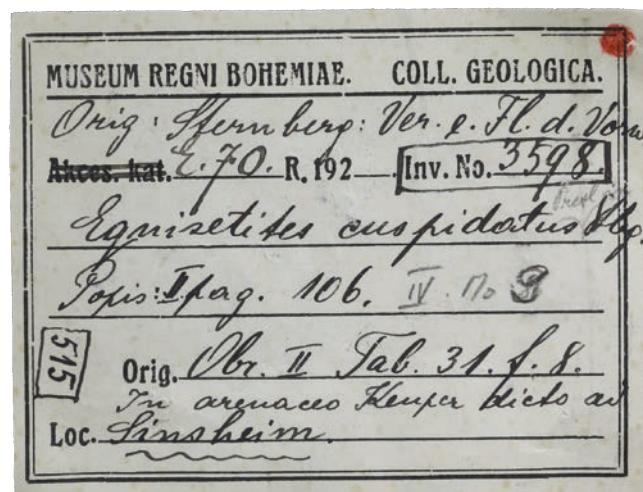

1868). Upon completion, it contained 1398 specimens (Palacký 1868). Sternberg's collection was gathered from different sources, but mainly from his own collecting activity. The majority of Carboniferous type material originated from Sternberg's own coal mines in the environs of Radnice, and from the other Late Palaeozoic basins in Bohemia. He collected some of the material during his numerous field trips abroad, and received other material from many collectors and scientists for study and determination. Many specimens were donated to him by scientists and owners of collections, e.g., Berger, Buckland, Goethe, Münster, Nilsson, Schlotheim, Stolz, etc. Sternberg and his collaborators, K. B. Presl and A. J. Corda treated specimens from all over Europe (Austria, Bohemia, England, France, Germany, Italy, Poland, Romania, Scotland, Switzerland, Sweden), from North America and Australia.

Sternberg began his extensive collecting after the death of his brother Joachim in 1808, when he inherited Joachim's collection of fossil plants (Palacký 1868). Later in the 1820s, fossil plants became the main focus of his work, and continued to be so for the rest of his life. Sternberg kept the collection in his palace Březina until the 1820s, when he decided to donate the collection to the newly founded National Museum in Prague. A young researcher from Prague Technical University, F. X. M. Zippe, was given the task of listing it; he later became well known as a mineralogist. Zippe furnished fossils with numbers written in Indian ink with black frames, 1 × 1.5 cm in size (see Text-fig. 1, top left), probably supervised by Sternberg himself. Zippe's catalogue is no longer available, and is most probably lost. However, this type of numbering can be seen on some specimens even today. They are often the only evidence that a given specimen comes from Sternberg's original collection. Fortunately, Zippe's original numbers were later copied onto new labels written by later curators with the designation NCM (Numero collectio Musei, see Text-fig. 2) or numbers in frames (handwritten by F. Němejc Text-fig. 3). Some specimens still have original labels written by Sternberg himself on strips of hand-made paper, with the name of the taxon, locality and infrequently with reference to Flora der Welt (Text-fig. 5). A great number of specimens are labelled with later labels written by O. Feistmantel

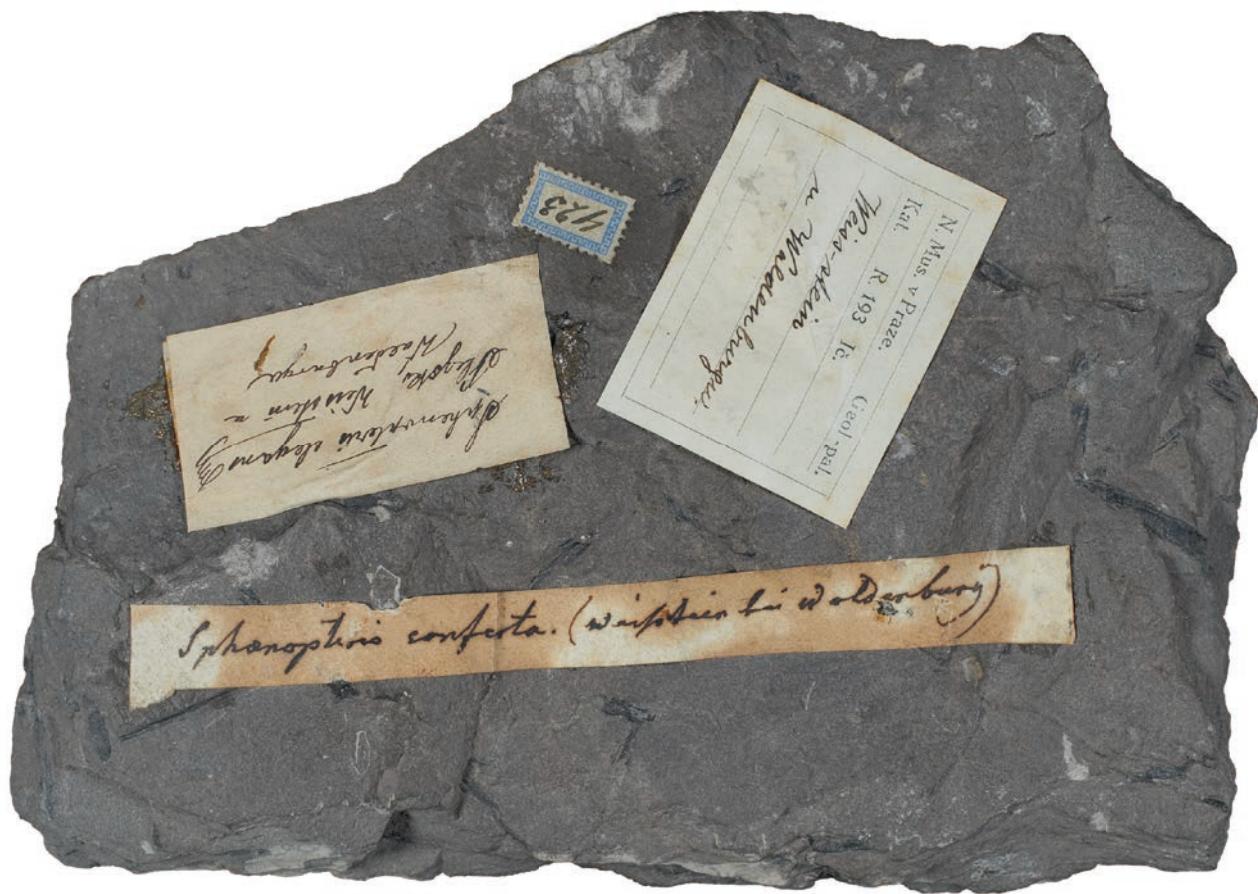

(Text-fig. 1). Some specimens are furnished with original labels written by collectors or by original holders of the specimens.

Sternberg's collection changed its location several times: in 1822 and successive years until 1838, when the collection was shipped from Březina palace to the collection of the National Museum, provisionally housed in the Sternberg palace in Prague; in 1847 it was moved to the Nostic palace, then in 1892 placed in the new building of the National Museum in the upper part of Wenceslas Square. The collection was finally moved to its current place, depository complex of the National Museum in Prague, Horní Počernice in 2011. For the purpose of shipping to the historic building of the museum in 1892, the specimens were labelled by small, blue, so-called "shipping numbers" (Text-fig. 1). In the historical building, however, numerous attractive type-specimens were exhibited and Sternberg's collection was dispersed among other palaeobotanic material. For the purpose of exhibition, original numbers and labels were removed and new labels, furnished with so-called exhibit numbers (ČGH), were introduced. This intervention accelerated the dispersal of Sternberg's collection. It is not known by whom or when the first catalogue of types was written with paint in red letters on a white background (see Pl. 1, Figs 1–5). In the twenties and thirties of 20th century, F. Němejc made a more accurate catalogue of Sternberg's type specimens. At the same time, he started a revision of some of the Late Palaeozoic plant fossils, also revising Sternberg's type specimens. Since that time, this part of Sternberg's collection has been studied by many scientists: Barthel, Cleal Florin, Havlena, Obrhel, Remy, Storch, Šetlík, Thomas and Trapl. Several years later, the Mesozoic and Tertiary material was studied by Bůžek, Hluštík, Holý, Kirchheimer, Knobloch, Kotlaba, Z. Kvaček and Mai.

Work on the catalogue of Sternberg's epithets was initiated by Holý in the 1970s. At this time, this palaeobotanist began to work on a card catalogue of epithets and the first revision of the type material of Tertiary age. After Holý's death (1984), the idea of a Sternberg catalogue was renewed by Z. Kvaček, working part time in the National Museum, who prepared a handwritten card catalogue of Sternberg's types.

Text-fig. 3. Museum label written by F. Němejc with NCM number framed in the bottom left (here 515).

Text-fig. 4. Back side of hand-specimen No K 425 showing Sternberg's label of *Sphenopteris conferta*, Feistmantel's label (top left), Němejc's label (top right) and "shipping number".

It has been possible to find some specimens, thanks to the complete rearrangement of the National Museum collection in the year 2011, which work continues to this day. However, some specimens are still missing. A large part of Sternberg's type material has never been owned by the National Museum. Those specimens had been loaned to Sternberg; in some cases, he probably only received drawings of the specimens. Therefore, various portions of Sternberg's type collection are housed in a number of European museums. Some of Schlotheim's types were described by Sternberg, and those are preserved in the Museum für Naturkunde in Berlin. Brongniart's types are preserved in the Muséum national d'Histoire naturelle, Paris. Some types of fossil plants from the German Liassic are housed in the Bayerische Staatssammlung für Paläontologie und Geologie, München (Jung and Knobloch 1972); a small fragment of Jäger's type material, which also contains Sternberg's types, is in the Staatliches Museum für Naturkunde, Stuttgart. Sternberg's types have been found e.g., in the Naturhistorisches Museum, Wien; Natural History Museum, London; Naturhistoriska riksmuseet, Stockholm; Oxford University Museum of Natural History (Cleal and Rees 2003), Great North Museum: Hancock, Newcastle upon Tyne (Neuman and Chatt-Ramsey 1988), Hunterian Museum – University of Glasgow and several other collections (for complete list see below). Additional type material may eventually be located in other European museums. Some of Sternberg's specimens

from the Jurassic of Germany in Munich, Stuttgart and also Schlotheim's collection in Berlin (Humboldt Museum) were destroyed during World War II.

The most difficult task we still face is identifying unfigured type specimens, especially in cases where the labels and numbers were removed. These type specimens can be found in various places, including the National Museum, Prague, but it is nearly impossible to identify them if the original labels are missing.

Sternberg began preparing the publication of the first issue of his most important work "Flora der Vorwelt" in 1818. Sternberg published it from 1820 to 1838 in two volumes, each in four parts. Sternberg funded the publication himself from his personal resource. He did not regret to invest money and printed on paper of high quality (folio size 400 × 250 mm). Texts were accompanied with high quality illustrations that were prepared by several painters (e.g., E. A. Auinger, C. Zetter, J. Schmelda, D. Preyssler) and engraved by an experienced J. Sturm in Nuremberg (Cleal et al. 2005). Illustrations were done with precision however, e.g., repeated pattern of leaf cushions of *Lepidodendron* were schematised as seen in the enclosed example (Text-figs 6, 7). Corda's plates 55bis and 61–68 were drawn by Corda himself, and printed probably in Prague.

The first and second parts of the first volume were issued in Leipzig and Prague, and printed by Benedict Gotthelf Teubner in Leipzig, the third and fourth parts were produced

by Christoph Ernst Brenck's Witwe in Regensburg. The fifth and sixth parts of the second volume were done by Johann Spurny in Prague and the seventh and eight parts were printed by Gottlieb Haase Söhne in Prague. The dates of issue of particular parts according to Taxonomic Literature (Stafleu and Cowan 1985) are:

volume	part	pages	plates	date
I	1	1–24	1–13	VII. (31. XII.) 1820
	2	1–33	14–26	I. – VIII. 1821
	3	1–39	27–39	I. – V. 1823
	4	1–48	40–59	IX. 1825
	tentamen	I–XLII	A–E	IX. 1825
II	5–6	1–80	1–26	III. – IV. 1833
	7–8	81–220	27–68, A, B	IX. – X. 1838

The formal date of issue of the first part, according to the Code (Turland et al. 2018) is accompanied herewith by the actual date found in Sternberg's diary, which was published in shortened form by Palacký (1868). Soon after the German text, Sternberg issued the French version of the FVW translated by F. D. de Bray (Text-fig. 11).

Part of the hand-written unsorted manuscript of FVW together with the part of the first proofs accompanied by Sternberg's notes and a great number of model aqua-colour paintings are housed in the library of the National Museum, Prague (Text-figs 5, 6). Several sketches for the first volume can be found in the Archive of the National Museum.

In FVW, more than 80 genera and 500 species of fossil plants have been described.

Sternberg was the first to start classifying fossil plants according to the principles of botanical taxonomy, in contrast to works of his contemporaries Volkmann, Schlotheim, Rhode etc., who insisted on artificial classification. He defined independent taxonomic units, genera and species, which he usually characterised and described in detail. He presented his system in a summary of well-discriminable taxa in "Tentamen florae primordialis" added at the end of the first volume (pp. I–XLII, abbreviated in the catalogue as tent. pp. 1–42). He re-evaluated some older sources, first of all Schlotheim's works, besides the works of Agardh, Rhode, Walch, Steinhauer etc. In some cases, he took over or corrected some of Brongniart's results as well. Discussions on stratigraphic, lithological and geological problems accompanied descriptions of fossil plants.

Although Sternberg's system was soon overridden by the more extensive system of Brongniart, the importance of Sternberg's work is beyond dispute. This is evident by the fact that December 31st, 1820, the agreed date of publishing the first part of FVW, was adopted as the starting-point of palaeobotanic nomenclature by the 8th International Botanical Congress in Paris in 1957. In the same document, it is stated that the work of Baron von Schlotheim's "Petrefactenkunde" is considered as a work published before this starting point, and so the names of taxa defined in this work are invalid. (The main reason for the rejection was the lack of generic

diagnoses of Schlotheim's works – Z. Kvaček 1982). A number of names, proposed by Schlotheim, are mostly validated within the framework of new taxa in FVW. Some of them were validated by Brongniart in "Prodromus" and by Schlotheim himself in 1832 (published posthumously), as well as by other authors. Unfortunately, Schlotheim's "Petrefactenkunde" includes several names that are invalid or illegitimate, but currently used. Therefore, to avoid undesirable changes, it is necessary to include several of Schlotheim's illegitimate epithets, validated by later authors, to the list of conserved names. In some cases, Sternberg did not adopt Schlotheim's epithets, but changed or substituted them (Z. Kvaček and J. Kvaček 1992). The types of these species are the specimens from Schlotheim's collection, partly stored in the Museum of Natural History of Humboldt University in Berlin. Sternberg cited Schlotheim's taxa as synonyms several times, but he had his own material for description of these species. These new Sternberg species cannot be identified automatically with those of Schlotheim. Some currently used pre-starting point names and several currently used later synonyms as well are threatened by a number of Sternberg's names of fossil plant species. It is desirable to include such Sternberg specific names into the list of rejected names to preserve the stability of palaeobotanic nomenclature. The solution to these problems cannot be done only formally, but must come only after a detailed taxonomic study of Sternberg's type material stored in the National Museum in Prague. Unfortunately, the majority of Sternberg's material is preserved only as impressions, often without remnants of cuticle. But there is a lot of comparative material from type strata and localities in our collection. By studying this material, it will be possible to designate the neotypes of species whose type material is probably lost.

This catalogue of Sternberg's type and figured material can help to solve a number of problems concerning nomenclature and taxonomy. Information concerning catalogue number, typification, systematic position, localities, name of collectors, Sternberg's original number and labels for each type and figured specimen, where available, are given in our catalogue. We have also perused the nomenclatural revision of these fossil plant species described by Sternberg, but a full taxonomical re-evaluation of all type material is beyond the scope of the present catalogue. It cannot be formally solved without a detailed study of the type material and profound knowledge of taxonomy of the particular plant fossil taxa.

The catalogue includes: 1. The list of genera described by Sternberg and K. B. Presl; 2. The list of type or figured specimens published by Sternberg, housed in the National Museum, Prague, and in other European museums, as well as missing specimens or specimens of unknown repository. These lists are completed with the most important synonyms and homonyms, type, systematic position, description, preservation, stratigraphy, locality, notes on labels etc.

A brief list of missing Sternberg's types, although shorter than in the first edition may present a challenge for museum curators or collection holders. We would appreciate any information about these types or figured specimens at our address: National Museum, Prague, Department of Palaeontology, Václavské nám 68, 110 00, Praha 1, the Czech Republic (e-mail: jiri.kvacek@nm.cz).

Flora der Vorwelt
von Grafen Kaspar Sternberg. Supplement.
zum Heft.

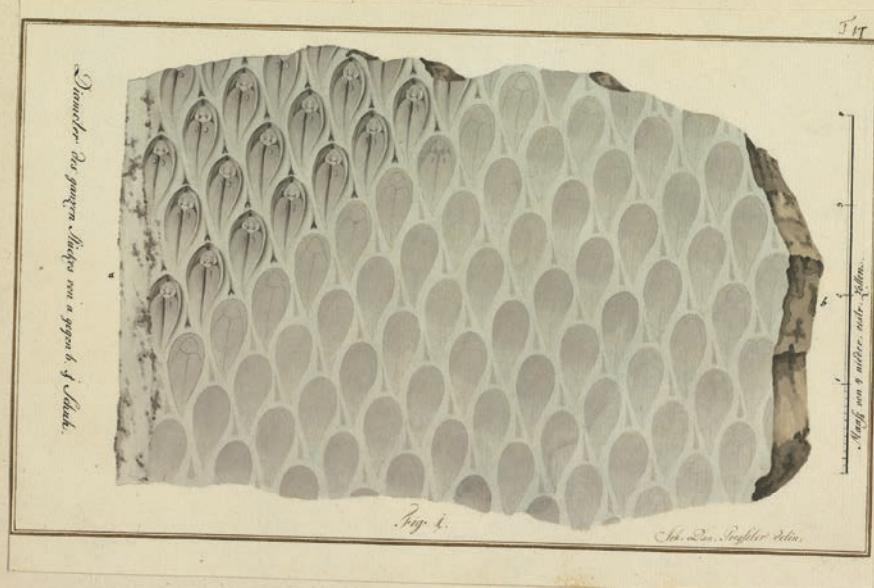

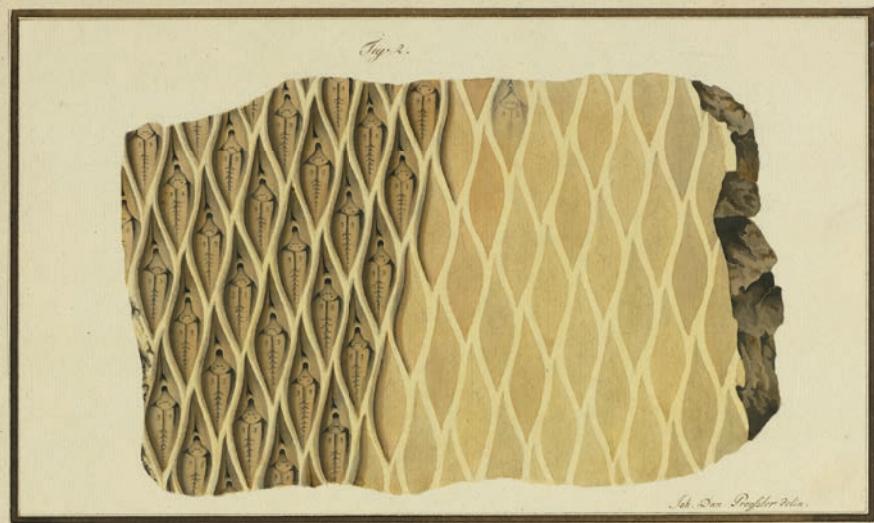

Wir hatten uns zwar vorgenommen nicht eher ein Supplement zu der Flora der Vorwelt folgen zu lassen bis nicht A: Adolph Brongniart seine Geschichte der fossilen Vegetation, welche der Anwendung nach in zwei Jahren abgeschlossen sein sollte würde vollendet haben. Es wurde jedoch diese Herausgabe durch unvorhergesehene Verzögerungen, vielleicht selbst durch die Schwierigkeit des Themas des Unternehmens um vieles verzögert und sinkt noch momentan sehr langsam vor. Indessen hat der Verfasser in mehreren Abhandlungen (1) und in einem herausgegebenen Codicilus (2) seine Ansichten dem Publicum mitgetheilt, welche auch ohne den näheren Beschreibung des Pflanzen hinreichen um ein aufgefasstes System zu konstituieren. Dieses und unser vorliegen der alten berücksichtigend welches ein zu langer nachwarten gestattet, haben wir uns bestimmen lassen früher hervorgebrachten überzeugt das ein gleichzeitiges durchaus unabhangiges bearbeiten ein und desgleichen naturwissenschaftlichen Gegenstandes durch zwei Verfasser die in ihren Ansichten nicht allgemein übereinstimmen für die Wissenschaften förd erlich werden können, indem das eine gegen das andere aus verschiedenen Gesichtspunkten betrachtet und beleuchtet werden wird.

Dies erscheint nunmal bei einem gleichem noch neuem Thore wünschenswerth zu sein, damit das Glaube an eine Authorität dem Verfasser nicht vortheile und den menschlichen Geist von genauer und nützlichen Forschungen nicht abziehe oder ableite.

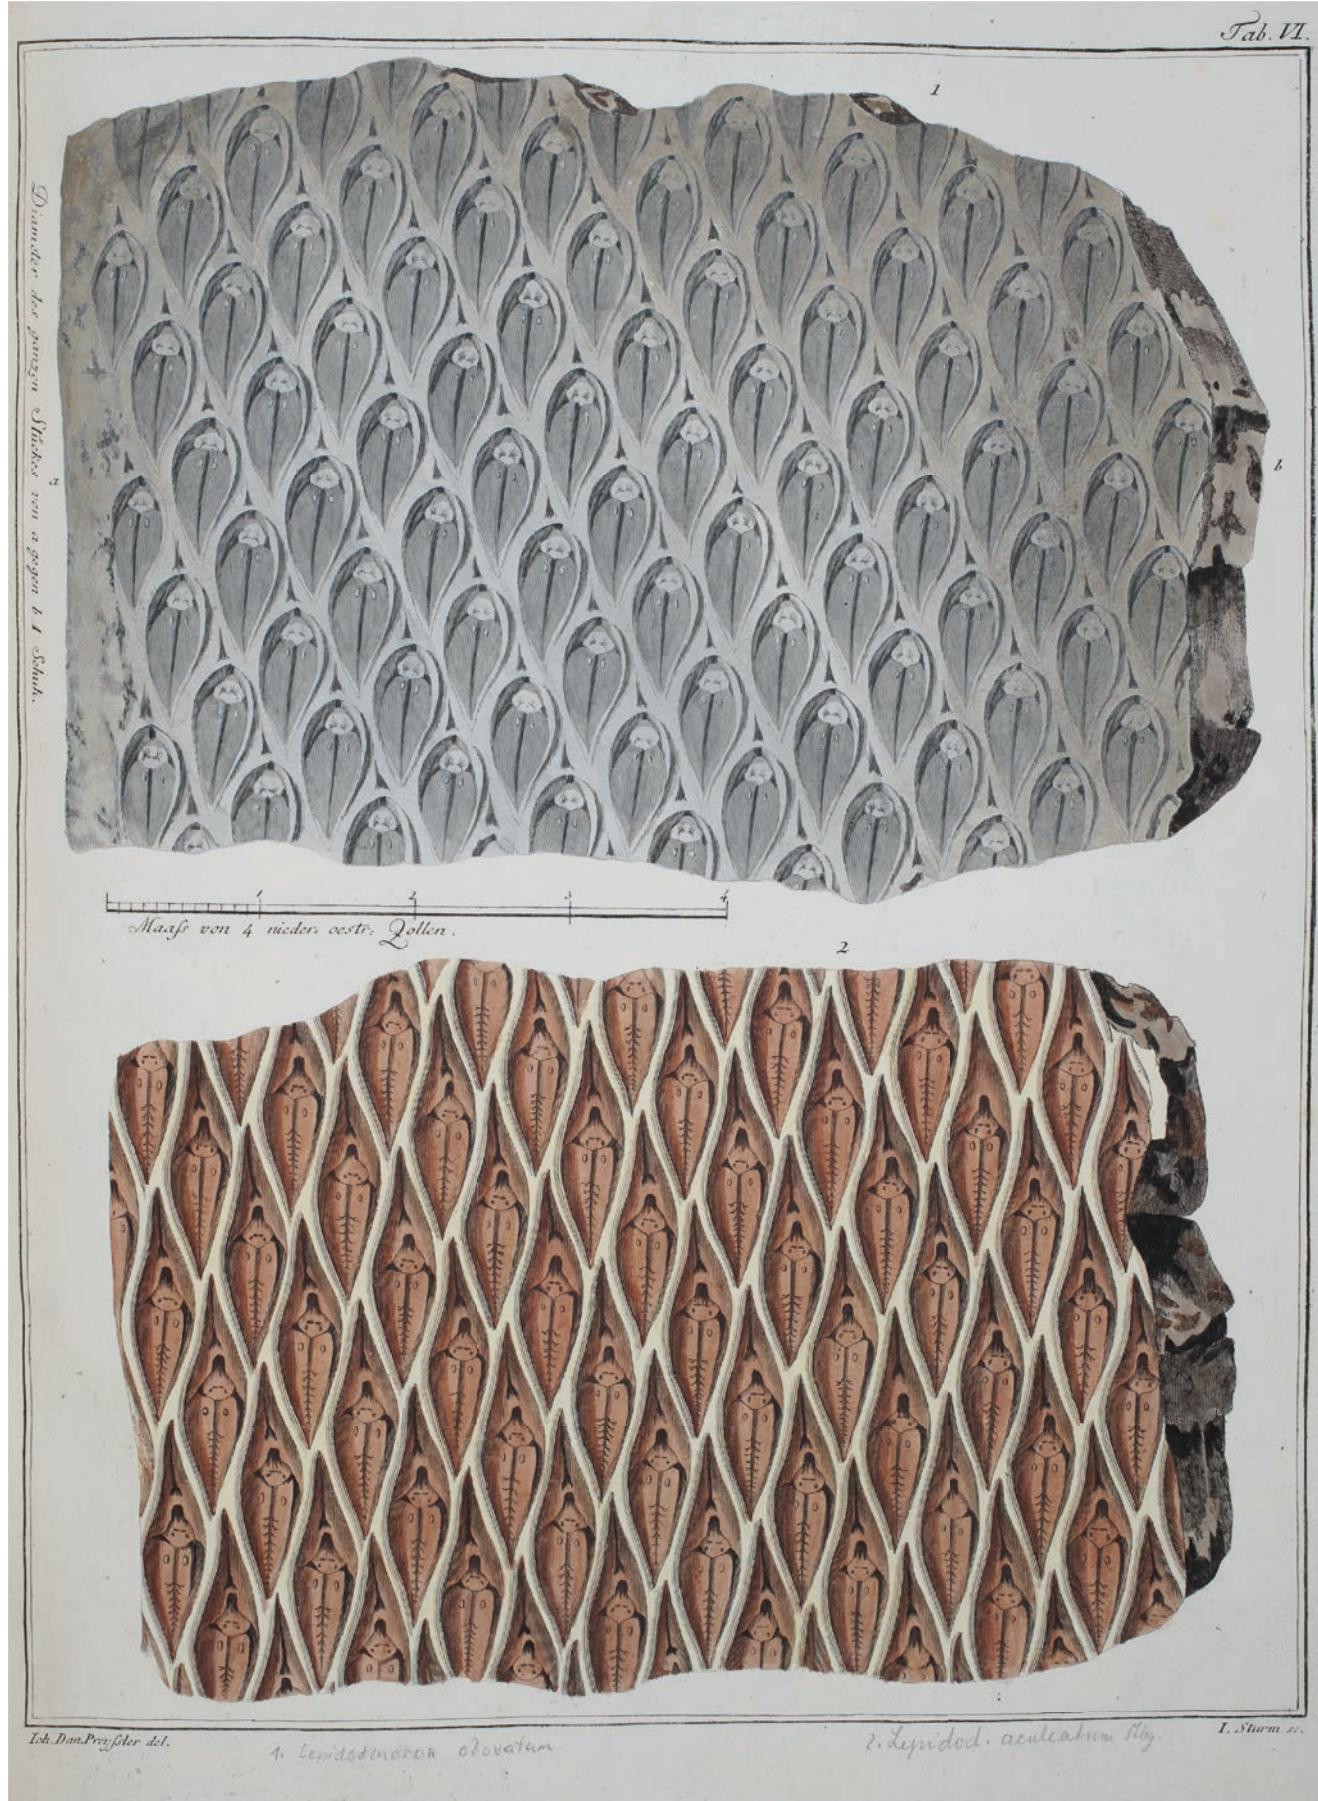

Es kommt überhaupt bei der Geschichte der Pflanzen der Vorwelt viel weniger auf die Bestimmung der einzelnen Species an, welche bei den Bruchstücken die uns bei der Bestimmung zu gebotth stehn nur seltener als absolut richtig anerkannt werden kann, als auf die

Kaspar Maria Count Sternberg (1761-1838)

Kaspar Maria Count Sternberg (Text-fig. 8) was born January 6th, 1761, in Prague. He was the third son of Jan Nepomuk Count Sternberg and Anna countess Kolowrat Krakowská, the daughter of the highest royal Burgrave. The careers of the Sternberg's brothers were provided by their parents: the oldest son, Jan Nepomuk pursued a military career and later inherited the estates of the family in Radnice in central Bohemia. His younger brother, Joachim, became a soldier, although he was more interested in physics, chemistry and mineralogy. The youngest son, Kaspar, was predestinated to be a clergyman. His parents bought him the post in the chapters of Regensburg and Freisig.

That is why in 1779, Sternberg went to Rome to the Collegium Germanicum to study theology. Although he was strongly influenced by antireligious policy of the emperor Joseph II, he completed his study in 1782 as a theologus absolutus. In 1785, he took the post of a Canon in Regensburg, and later in Freisig. A brilliant political career lay ahead of him. In 1802, the bishop of Regensburg, who had been independent up to that time, was subordinated to the archbishop of Mainz. The archbishop of Mainz, Karl Dahlberg, appointed Kaspar Sternberg vice-president of the commissariat for establishing a new state, whose president was the count Thurn-Taxis, who was however, a sickly man. A route to become an archbishop of Mainz and one of the electors opened for him. But by that time, Sternberg already understood that the French revolution forces directed against the clergy and nobility, classes to which he belonged, were being set into motion. With great spiritual energy, he began to part from his position as a prelate of the German Catholic Church. He later wrote in his own biography that he had found his path in natural science, especially in botany; that it had become the turning point in his life. His interest in botany

had been raised by the president of the Botanical Society of Regensburg, Count Bray, who became his friend and later the first translator of Sternberg's work. In 1804, Sternberg accompanied the Duke of Mainz, archbishop Dahlberg, to Paris, where he took part in the coronation of Napoleon as the emperor of France. During this journey, Sternberg met many outstanding natural historians. When visiting count Faujas de Sant Fond, he saw the impressions of fossil plants from England, which reminded him of similar findings in the collection of his brother Joachim. At the same time, he saw the first issue of Schlotheim's *Beschreibung merkwürdiger Kräuter-Abdrücke und Pflanzen-Versteinerungen*. That was the first impulse of Sternberg's interest in palaeobotany. In August 1806, Sternberg resigned from his position as vice-president of the land executive, which was confirmed in November of the same year.

Sternberg also had to leave his ecclesiastical and political career due to family events. Both his brothers died – Jan Nepomuk in 1789, Joachim in 1808, which is why the only count from the Leopoldov branch of the Sternberg family was obliged to manage the family estates. In 1810, Kaspar Sternberg definitively moved to the palace in Březina, which had been built by his brother Joachim, although it was still unfurnished. Before long, he met the mineralogist and botanist Lindacker, and the mine measurer and entomologist Preissler; with the latter he visited his ore and coal mines, where he saw fossil plants in their original localities for the first time. Both his new friends helped him to arrange and exhibit his brother's mineral collection in the palace of Březina.

As early as during his activity in Regensburg, Sternberg studied the flora of the German, Salzburg, Tyrolese, Corinthian and Italian Alps. The results of his work were published in a three-volume monograph with the title "*Revisio Saxifragarum iconibus illustrata*", published successively in 1810, 1821 and 1831 in Regensburg and Prague.

In 1814, Sternberg visited Graz to scrutinize a newly established museum – Joanneum. Here the idea of a Czech national museum came again to his mind. Before long, he convinced the highest burgrave of the Czech Kingdom, Count František Kolowrat Libějinský, about this idea. The latter gave out an appeal with the title "To patriotic friends of science" on April 15th, 1818, wherein he emphasized the necessity of founding the Patriotic Museum of Bohemia. Inspired by that appeal, the Society of the Patriotic Museum of Bohemia was founded on December 23rd, 1822. At the first meeting of this society, count Sternberg was elected its president. He was elected several more times, holding the position until his death. He was the most prominent scientific personality of the museum and at the same time, as a representative of Czech aristocracy, he guaranteed its social prestige. Using the opportunity of the society opening, he announced he was presenting his whole collection and library concerning natural science to the museum. It may be of some interest to know that Sternberg and Lindacker's mineral collection included about 5000 specimens; there were 9000 species of plants in his herbarium, his palaeobotanical collection had almost 1400 specimens and his library more than 4000 volumes.

At the same time, having begun in 1818, Sternberg was preparing the publication of the first issue of *Flora der Vorwelt*. He was travelling, making excursions, meeting many

researchers and collectors, studying their collections. Among his friends who presented or lent him some specimens, it is necessary to mention Buckland from Oxford, Goethe from Weimar, Agardh and Nilsson from Lund, Noeggerath from Bonn, Münster from Bayreuth, Schlotheim from Gotha. He concentrated his interest not only on palaeobotany, but he also published three contributions on Czech trilobites. The first one "Übersicht der in Böhmen dermalen bekannten Trilobiten" appeared in 1825 in *Verhandlungen der Gesellschaft der Vaterlandischen Museums in Böhmen*, the second one, written in 1830, was published in the 23rd issue of the journal *Isis* and the last one, from 1833, appeared as a special supplement of *Verhandlungen*. With that paper, the oldest study of Czech trilobites reached its peak. The author collected there the hitherto published data, and revised and unified the nomenclature of all known trilobites.

The least-known is Sternberg's economic activity. He was, for example, the president of the joint-stock company for building railways, and a shareholder in the corporation for building a chain bridge in Prague. His papers on introducing potatoes and maize to Europe and a treaty on fishing in Bohemia are noteworthy as well. In 1831, at the age of 74, Sternberg began to study the history of mining and mining law. After collecting sources for four years, he wrote and in 1836 published the first part of "Umrisse einer Geschichte der böhmischen Bergwerke". One year later a second volume appeared; it presented the jurisdiction of mining from the Middle Ages to the author's period.

At the age 76, Kaspar Count Sternberg succeeded to organise the 15th Congress of German Natural Scientists and Medicine Doctors in Prague. Sternberg organized the congress with great effort, realizing, that it would officially introduce Bohemia in European science. Sternberg suspected this was the high point in his career. During the opening speech on September 18th, 1837 he expressed the main reason of the congress and for similar meetings in the future: development of research of the natural history and its contribution to the development of the society.

During 1838 Sternberg became ill but he continued working intensively to finish FVW with K. B. Presl and A. J. Corda, the last part of which was issued two month before his death. K. M. Sternberg died on December 20th, 1838.

Karel Bořivoj Presl (1794-1852)

Karel Bořivoj Presl was born on February 17th, 1794 in Prague, as the second son of Jakub Presl – a Prague resident (Text-fig. 9). From his youth, he was interested in natural history. Together with his brother Jan Svatopluk, he collected plants and arranged a herbarium.

He studied medicine and botany at Prague University, where he graduated in 1818. During the study, he made a long journey on foot to Sicily. He used material from the experiences in his dissertation on garminoids of Sicily. In 1819, he became an assistant to professor Berger, the chair of zoology and mineralogy at the Prague University. During that time, he helped Kaspar M. Count Sternberg to arrange an herbarium in the newly founded National Museum. In February 1823 (Nebeský 1868), after Sternberg's recommendation, he became the second museum curator,

Text-fig. 9. Karel Bořivoj Presl. Painting reprinted from Viníklář (1931).

alongside F. X. M. Zippe. He was curator of the botany and zoology collections. In 1835, the zoological collection was separated and curated by A. J. Corda, after which K. B. Presl focused completely on the botanical collections. In 1832, he was appointed a professor of natural history and technology in the philosophical faculty in the Prague University. While working in the faculty, he kept his place in the museum, using the library and collections for his studies (employed until 1849 in the museum). In 1835, K. B. Presl was accepted as a proper member of the Bohemian Royal Scientific Society. Later in 1849, he was promoted to dean of the philosophical faculty. His famous works on botany include "Reliquiae Haenkeanae..." (1828 – 1835), "Tentamen Pteridographiae..." (1836), "Hymenophyllaceae" (1843) and "Die Gefäßbünden im Stipes der Farrn" (1847).

Beside the enormous work on botany, he spent some time working with fossil plants during his stay in the museum. Probably, in the beginning of the 1830s, the visually impaired Sternberg challenged K. B. Presl and A. J. Corda to finish his large work "Versuch einer geognostisch-botanischen Darstellung der Flora der Vorwelt". Sections 7 and 8 of the second volume were arranged, with several exceptions, by K. B. Presl and A. J. Corda.

K. B. Presl added 33 new genera and 126 species of fossil plants. Using his own system, he introduced many new names to already published taxa, so many of his new names are illegitimate. Beside Carboniferous fossil plants from the Middle Bohemian Coal Basin, Upper Silesian Basin, and the USA, he was also interested in lesser-known material from

the Mesozoic, especially from the Bohemian Cretaceous Basin and the German Rhaeto-Liassic. He described several taxa from the Tertiary flora of north-west Bohemia, Austria and Italy. In addition to taking part in Sternberg's large work, he published one small contribution (Presl 1838) on two fossil cones *Volkmania elongata* and *V. gracilis*. He correctly classified both of them as members of the Class Equisetopsida. For the first time, he pointed out the similarity between the stem *Calamites* and the foliage of *Asterophyllites*.

In contrast to Sternberg and Corda, he did not leave any specific labels on the type specimens. It is thought that his labels are made from similar strips of paper to Sternberg's labels, but written with a pencil, making them nearly unreadable today.

August Carl Joseph Corda (1809-1849)

August C. J. Corda was born on October 22nd, 1809, in Liberec in Northern Bohemia (Text-fig. 10). His father August, a textile merchant, died in September 1810, his wife Marie Anna died only three month later, in December. Their baby, fourteen month old August Joseph, was brought up by his grandmother Teresia Cerutti. In 1821, after his grandmother's death, Corda moved to Prague, to stay with his uncle Adalbert Daniel Corda. He was trained in the drugstore of Václav Battka. At that time Corda also attended lectures on botany, chemistry and mineralogy, and became acquainted with Prague's prominent scientific personalities, Professors Tausch, Zippe, Krombholz and Bolzano. Corda was a talented artist, who made illustrations for many books on natural sciences. At that time, Corda began his own research, and his first publication was issued in 1820. In 1829, he began to study medicine at the Prague Medical faculty; in 1832 he helped as a doctor during the cholera epidemic in Prague, Rokycany and Northern Bohemia. From 1832 – 1833, during his journey to Germany, he visited the most prominent scientist of the century. The meeting with Alexander von Humboldt was very important for Corda's future career. In September 1833, Corda held a lecture at the International congress of German Medicine and Natural Sciences. After the congress, he returned to Berlin, where he obtained financial support from the German Academy of Sciences. He studied fossil palms and the structure of fossil wood, but hadn't acquired a permanent position. In 1834, he returned to Prague. In May 1835, he was appointed a curator of zoological collections in the National Museum in Prague. This post was very important for his future and his research work. In 1837, the first volume of Corda's mycological work "*Icones fungorum hucusque cognitorum*" was issued. One year later, in 1838, Kaspar Sternberg published the last volume of his work Flora der Vorwelt, with Corda's independent appendix "Skizzen zur comparativen Anatomie vor- und jetztweltlicher Pflanzenstämme". But after Sternberg's death on December 20th, 1838, Corda's post in the Museum was no longer secure, so he applied for the positions of professor at the Polytechnic Institute, and curator in the Natural History Cabinet both in Vienna and professor of natural sciences in Olomouc. He obtained none. In 1841, he was chosen to participate in the journey around the World on board the Danish ship "König von Dänemark". But this journey was

Text-fig. 10. August Carl Joseph Corda. Mixed technique by W. König. Collection of the Department of Palaeontology, National Museum, Prague.

postponed and Corda didn't take part in it. At that time Corda prepared the palaeobotanical work "Beiträge zur Flora der Vorwelt", which was issued in 1845. In 1847, Corda accepted the proposal of Count Colloredo-Mansfeld to participate in an expedition to the USA as a natural scientist and doctor. In 1848, he also took an active part in a political movement. In October 1848, he left Prague, and on December 13th landed in New Orleans. During his journey, he visited the states of Louisiana and Texas, and sent many letters to Prague, containing some knowledge concerning the nature and life of the people. In September 1849, he perished during the shipwreck of the ship Victoria in the Atlantic Ocean.

A list of institutions housing the type specimens treated in works by K. M. Sternberg

Bayerische Staatssammlung für Paläontologie und Geologie,
München (B. S. München; Palaeontological Museum,
Munich)

Geowissenschaftliches Zentrum der Georg-August-Universität
Göttingen

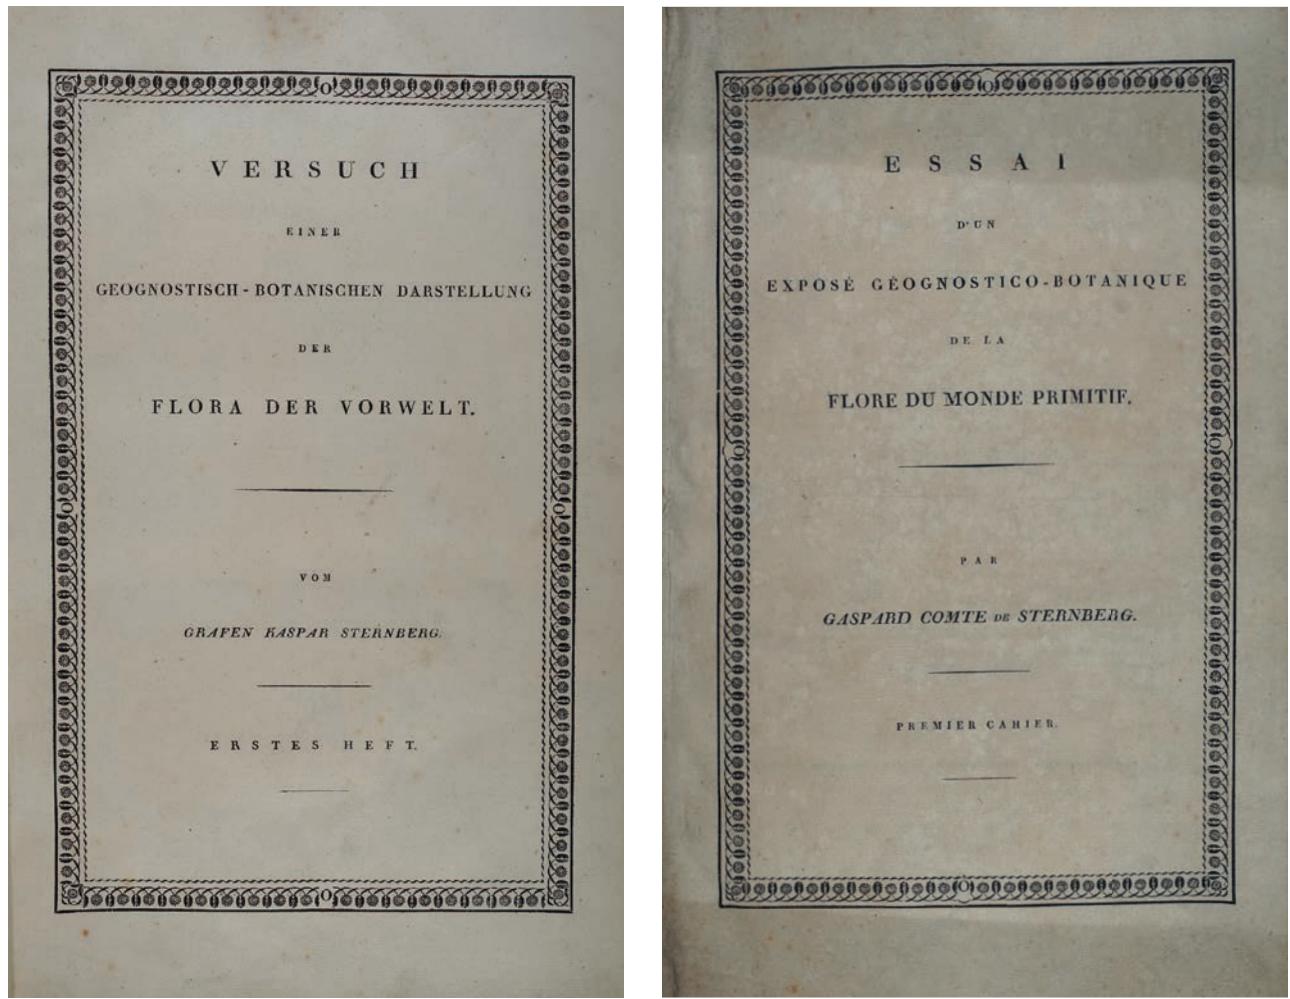

Great North Museum: Hancock, Newcastle upon Tyne
Hunterian Museum – University of Glasgow

 Yorkshire Museum, York

Acknowledgements

Our warmest thanks go to Zlatko Kvaček (Charles University, Prague), Zdeněk Pouzar and Jan Wagner (National Museum, Prague) for their help in preparation of the manuscript, especially the nomenclature. We are most grateful for help from all the holding museums and curators, particularly Else Marie Friis, Stephen McLoughlin (Naturhistoriska riksmuseet, Stockholm), Johanna Eder-Kovar, Matthias Krause (Staatliches Museum für Naturkunde, Stuttgart), Lilla Hably (Magyar Természettudományi Múzeum, Budapest), Lutz Kunzmann (Senckenberg Naturhistorische Sammlungen, Dresden),

Andreas Kroh (Naturhistorisches Museum, Wien), Stephan Schultka (Museum für Naturkunde, Berlin), Michael Krings (Bayerische Staatssammlung für Paläontologie und Geologie, München), Cedric Shute (Natural History Museum, London), Phillip Powell (Oxford University Museum of Natural History), Kévin Janneau (Jardin des sciences de l'Université de Strasbourg), Alexander Gehler (Georg-August-Universität, Göttingen), Neil D. L. Clark (Hunterian Museum), Lea Grauvogel-Stamm (Université de Strasbourg), Sylvia Humphrey (The Great North Museum: Hancock) for their assistance with searching type specimens in their collections. Christopher J. Cleal, John McNeill, Johanna H. A. van Konijnenburg-van Cittert, Zea Zijlstra, Alexander Doweld, Evelyn Kustatscher, Günter Schweigert, Adam T. Halamski, Christopher Hill, Radek Mikuláš, Jan Sklenář are acknowledged for their help in search of information to the studied material or nomenclature. We are grateful to Lenka Váchorá and Jan Sklenář who photographed and adjusted all photographs of the type specimens and Petr Daneš for English editing. This project was financed through the Czech Ministry of Culture (IP DKRVO 2019-2023 2.II.c, National Museum, 00023272) and institutional support RVO 67985831 of the Institute of Geology of the Czech Academy of Sciences.

Generic and infrageneric names proposed in works by K. M. Sternberg

All new generic or infrageneric names published by K. M. Sternberg or his collaborators in his works are arranged in alphabetical order. The nomenclature of each taxon name has been revised with synonymy and type, accompanied by its stratigraphy and locality. In cases of invalidly published or illegitimate names, the relevant article of the International Code of Nomenclature for Algae, Fungi, and Plants (Turland et al. 2018) is attached.

Each record is arranged in the following order:

Generic name or subgeneric name

Synonymy

Type and its shortened synonymy

Reference to the type

Notes

Steffensia GÖPP. sogen. *Acropteris* C.PRESL in Sternberg 1838

1838 *Steffensia* GÖPP. subgen. *Acropteris* C.PRESL in Sternberg, vol. II, 7/8, p. 125

Type:

1836 *Steffensia davallioides* GÖPP., p. 269, pl. 11, figs 3, 4

Carboniferous; Poland, Walbrzych (“Waldenburg”)

Alethopteris STERNB. 1825

1825 *Alethopteris* STERNB., vol. I, 4, tent. p. 21

Type:

1825 *Alethopteris lonchitica* STERNB., p. vol. I, 4, tent. p. 21 (“*lonchitidis*”)

1804 sine nomine; Schlotheim, p. 55, pl. 11, fig. 22

≡1820 *Filicites lonchiticus* SCHLOTH., p. 441, nom. inval., Art. 13.1 (f)

Type designated formally by Andrews (1955). LECTOTYPE of *Alethopteris lonchitica* STERNB. 1825, No Π 153 designated by J. Kvaček and Straková (1997), coll. Museum für Naturkunde, Berlin.

Carboniferous; Germany, Saarbrücken

For more details see *lonchitica*

Annularia STERNB. 1821

1821 *Annularia* STERNB., vol. I, 2, p. 28, 32

Type:

1821 *Annularia spinulosa* STERNB., vol. I, 2, p. 32, pl. 19, fig. 4

Type designated by Miller (1889). HOLOTYPE of *Annularia spinulosa* STERNB. 1821, Nos E 39, E 1989 (part and counterpart), coll. National Museum, Prague.

Carboniferous; Plauen, Germany

For more details see *spinulosa*

Aphlebia C.PRESL in Sternberg 1838

1838 *Aphlebia* C.PRESL in Sternberg, vol. II, 7/8, p. 112

Type:

1838 *Aphlebia acuta* (KAULF. et GERMAR) C.PRESL in Sternberg, vol. II, 7/8, p. 112

≡1831 *Fucoides acutus* KAULF. et GERMAR, 15 (2), p. 230, pl. 66, fig. 7

≡1835 *Algacites acutus* (KAULF. et GERMAR) STERNB., vol. II, 5/6, p. 37

Type designated formally by Andrews (1955).

Carboniferous; Germany, Wettin

Araucarites C.PRESL in Sternberg 1838

1838 *Araucarites* C.PRESL in Sternberg, vol. II, 7/8, p. 203, nom. cons. (non *Araucarites* ENDL. 1837, p. 263, nom. rej.)
(Zijlstra and van Konijnenburg-van Cittert 2000))

Type:

1838 *Araucarites goeppertii* C.PRESL in Sternberg, vol. II, 7/8, p. 204, pl. 39, fig. 4
≡1926 *Conites goeppertii* (C.PRESL in Sternberg) FLORIN in Reid and Chandler, p. 50

Type designated formally by Andrews (1955), confirmed by Zijlstra and van Konijnenburg-van Cittert (2000). HOLOTYPE of *Araucarites goeppertii* C.PRESL in Sternberg 1838, No E 174, coll. National Museum, Prague. The type differs markedly from the fossils ascribed to this genus in current practice (Z. Kvaček 1971, p. 118).

Paleogene; Austria, Häring

≡1825 *Bucklandia anomala* (STOKES et WEBB) STERNB., vol. I, 4, tent. p. 23

1992 *Bucklandia anomala* (STOKES et WEBB) STERNB.; Watson and Sincock, p. 186 (LECTOTYPE of *Clathraria anomala* STOKES et WEBB 1824, pl. 45, fig. 1)

Type designated formally by Andrews (1955), confirmed by Watson and Sincock (1992). LECTOTYPE of *Clathraria anomala* STOKES et WEBB 1825, No V.63625, coll. Natural History Museum, London.

Cretaceous, Wealden; United Kingdom, Sussex

Calamites STERNB. 1820

1820 *Calamites* STERNB., vol. I, 1, p. 22, 24 (“*Calamitis*”) orth. cons.

1820 *Calamites* SCHOLTH., p. 398, nom. inval., Art. 13.1

Type:

1828e *Calamites suckowii* BRONGN., vol. I, 2, p. 124 (pl. 14, fig. 6, pl. 15, figs 1–6, pl. 16), typ. cons. (Cleal et al. 2012)

Type designated by Cleal et al. (2012).

The nomenclatural status of *Calamites* has been the subject of frequent discussions, and a number of proposals have been made (e.g., Lanjouw 1953, Storch 1981, Greuter et al. 1994, Cleal et al. 2012). The position stated here is following Cleal et al. (2012) and Cleal and Thomas (2018).

Carboniferous, Middle Pennsylvanian Series; Germany, Dudweiler near Saarbrücken

Calamoxylon CORDA in Sternberg 1838

1838 *Calamoxylon* CORDA in Sternberg, vol. II, 7/8, p. 195

Type:

1838 *Calamoxylon cycadeum* CORDA in Sternberg, vol. II, 7/8, p. 195, pl. 54, figs 8–13

Type designated formally by Andrews (1955). HOLOTYPE of *Calamoxylon cycadeum* CORDA in Sternberg 1838, No E 113, coll. National Museum, Prague.

Carboniferous; Bohemia, Chomle near Radnice

For more details see *cycadeum*

Camptopteris C.PRESL in Sternberg 1838

1838 *Camptopteris* C.PRESL in Sternberg, vol. II, 7/8, p. 168, nom. cons. prop. (Doweld 2018a) (non *Camptopteris* SCHIMP.

1869, p. 631, nom. illeg., Art. 53.1)

≡1832 *Quercites* H.BERGER, p. 22, nom. rej. prop. (Doweld 2018a)

Type:

1878 *Camptopteris spiralis* NATH., p. 33, pl. 2, fig. 8, pl. 3, pl. 4, figs 1–6, pl. 8, fig. 1, typ. cons. prop. (Doweld 2018a)

Type proposed by Doweld (2018a). LECTOTYPE of *Camptopteris spiralis* NATH. proposed by Doweld (2018a), No S054857 from the Rhaetian of Bjuf, Sweden, coll. Naturhistoriska riksmuseet, Stockholm.

Jurassic, Liassic; Germany, Strullendorf (“Strahlendorf”)

Doweld (2018a) pointed out that *Camptopteris*, when published was a nomenclaturally illegitimate name, as it included the original type *Quercites lobatus* H.BERGER. Presl in Sternberg (1838) cited the name *Quercites lobatus* H.BERGER as a synonym of *Camptopteris nilsonii* C.PRESL in Sternberg, thereby making *Camptopteris* C.PRESL in Sternberg a superfluous and illegitimate name.

Catenaria STERNB. 1825

1825 *Catenaria* STERNB., vol. I, 4, tent. p. 25, nom. illeg., Art. 52.1 (non *Catenaria* ROUSSEL 1806, p. 85)

Type:

1825 *Catenaria decora* STERNB., vol. I, 4, tent. p. 25, pl. 52, fig. 1

Type designated formally by Andrews (1955).

Carboniferous; Germany, Löbejün (“Loebeginn”), Wettin

For more details see *decora*

Chondrites STERNB. 1833

1833 *Chondrites* STERNB., vol. II, 5/6, p. 25

Type:

1828d *Fucoides targionii* BRONGN., vol. I, 1, p. 56, pl. 4, fig. 6

≡1833 *Chondrites antiquus* (BRONGN.) STERNB. vol. II, 5/6, p. 27

Type designated by Miller (1889, p. 25). It was described as an alga, but it is a trace fossil.

Quaternary; Linosa Island, (“Ile de Linoe” – Brongniart 1828d)

Codites STERNB. 1833

1833 *Codites* STERNB., vol. II, 5/6, p. 20

Type:

1833 *Codites serpentinus* STERNB., vol. II, 5/6, p. 20, pl. 3, fig. 1

Type designated formally by Andrews (1955).

Jurassic; Germany, Solnhofen

For more details see *serpentinus*

Columnaria STERNB. 1825

1825 *Columnaria* STERNB., vol. I, 4, tent. p. 25 (non *Columnaria* VOLOGDIN 1962, p. 235, nom. illeg., Art. 53.1)

Type:

1825 *Columnaria intacta* STERNB., vol. I, 4, tent. p. 25

Type designated formally by Andrews (1955).

Carboniferous; Germany, Aachen

For more details see ***intacta***

Conites STERNB. 1823

1823 *Conites* STERNB., vol. I, 3, p. 36, 39

≡1828a *Bucklandia* BRONGN., p. 128, nom. illeg., Art. 53.1

Type:

1823 *Conites bucklandii* STERNB., vol. I, 3, p. 36, 39, pl. 30

≡1828a *Bucklandia squamosa* BRONGN., p. 128, nom. illeg., Art. 52.1

Type designated formally by Andrews (1955), accepted by Cleal and Rees (2003).

HOLOTYPE of *Conites bucklandii* STERNB., No. J.29202, coll. Oxford University Museum.

Jurassic, Bathonian; United Kingdom, Stonesfield

The type differs significantly from the fossils ascribed to this genus in current practice.

For more details see ***bucklandii***

Crepidopteris C.PRESL in Sternberg 1838

1838 *Crepidopteris* C.PRESL in Sternberg, vol. II, 7/8, p. 119 (non *Crepidopteris* COPELAND 1938, p. 57, nom. illeg., Art. 53.1)

Type:

1833 *Pecopteris marginata* BRONGN., vol. I, 7, pl. 87, fig. 2

≡1838 *Crepidopteris marginata* (BRONGN.) C.PRESL in Sternberg, vol. II, 7/8, p. 119

Type designated formally by Andrews (1955).

Carboniferous; France, Alais

Cromyodendron C.PRESL in Sternberg 1838

1838 *Cromyodendron* C.PRESL in Sternberg, vol. II, 7/8, p. 193, nom. illeg., Art. 52.1.

≡1825 *Scitaminites* STERNB., vol. I, 4, p. 36, nom. rej. (Doweld 2013c)

Type:

1820 *Scitaminites musaeformis* STERNB., vol. I, 1, p. 20, pl. 5, figs 2a, b

≡1838 *Cromyodendron radnicense* C.PRESL in Sternberg, vol. II, 7/8, p. 193, nom. illeg., Art. 52.1

≡1845 *Psaronius musaeformis* (STERNB.) CORDA, p. 94, pl. 45, fig. 3

Type designated formally by Andrews (1955). HOLOTYPE of *Scitaminites musaeformis* STERNB., No E 205, coll.

National Museum, Prague.

Carboniferous; Bohemia, Radnice

For more details see ***radnicense***

Cunninghamites C.PRESL in Sternberg 1838

1838 *Cunninghamites* C.PRESL in Sternberg, vol. II, 7/8, p. 203

Type:

1838 *Cunninghamites oxycedrus* C.PRESL in Sternberg, vol. II, 7/8, p. 203, pl. 48, fig. 3, pl. 49, figs 1a, b, c

Type designated by Seward (1919, p. 433), confirmed by Bosma et al. (2012). LECTOTYPE of *Cunninghamites oxycedrus* C.PRESL in Sternberg 1838, No F 642, designated by J. Kvaček and Straková (1997), coll. National Museum, Prague. The diagnosis of *Cunninghamites* C.PRESL in Sternberg (1838) is short, “leaves reminiscent of *Cunninghamia*”, but sufficient for valid publication.

Cretaceous, Cenomanian; Germany, Niederschöna (“Shoena”)
For more details see *oxycedrus*

Cycadites STERNB. 1825

- 1825 *Cycadites* STERNB., vol. I, 4, tent. p. 32, (non *Cycadites* BRONGN. 1828a, p. 92, 93, nom. illeg., Art. 53.1 nec *Cycadites* BUCKLAND 1836, p. 496, nom. illeg., Art. 53.1)
Type:
1825 *Cycadites nilsonii* STERNB., vol. I, 4, p. 41, tent. p. 32, pl. 47, fig. 1, nom. illeg., Art. 52.1
1820b sine nomine; Nilsson, p. 285, pl. 4, fig. 3
≡1825 *Nilssonia brevis* BRONGN., p. 218, pl. 12, fig. 4

Type designated formally by Andrews (1955). HOLOTYPE of *Cycadites nilsonii* STERNB. 1825 ≡ *Nilssonia brevis* BRONGN. 1825 confirmed by van Konijnenburg-van Cittert et al. (2016), No S87452, coll. Naturhistoriska riksmuseet, Stockholm.

Triassic, Rhaetian; Sweden, Höör

For more details see *nilsonii*

Cyphopteris C.PRESL in Sternberg 1838

- 1838 *Cyphopteris* C.PRESL in Sternberg, vol. II, 7/8, p. 121
Type:
1834a *Pecopteris punctulata* BRONGN., vol. I, 8, p. 295, pl. 93, figs 1, 2
≡1838 *Cyphopteris punctulata* (BRONGN.) C.PRESL in Sternberg, vol. II, 7/8, p. 121

Type designated formally by Andrews (1955). The type specimens are probably housed in the Muséum de Strasbourg (No P18).

Carboniferous; USA, Pennsylvania, Wilkesbarre

Cystoseirites STERNB. 1833

- 1833 *Cystoseirites* STERNB., vol. II, 5/6, p. 35
Type:
1833 *Cystoseirites partschii* STERNB., vol. II, 5/6, p. 35, pl. 11, fig. 1

Type designated formally by Andrews (1955). HOLOTYPE of *Cystoseirites partschii* STERNB. 1833, No Pb502, coll. Naturhistorisches Museum, Wien.
Neogene, Miocene; Romania, Săcădat (“Szacadat”)
For more details see *partschii*

Dammarites C.PRESL in Sternberg 1838

- 1838 *Dammarites* C.PRESL in Sternberg, vol. II, 7/8, p. 203
=1866 *Palaeostrobus* RENGER, p. 137, nom. illeg., Art. 53.1
=1866 *Kranneria* CORDA in Renger, p. 134
Type:
1838 *Dammarites albens* C.PRESL in Sternberg, vol. II, 7/8, p. 203, pl. 52, figs 11, 12

Type designated formally by Andrews (1955), confirmed by Hluštík (1976). HOLOTYPE of *Dammarites albens* C.PRESL in Sternberg 1838, No F 82, coll. National Museum, Prague.
Cretaceous, Cenomanian; Bohemia, Nový Bydžov (“Neubidschow”)
For more details see *albens*

Encoelites STERNB. 1833

- 1833 *Encoelites* STERNB., vol. II, 5/6, p. 33

Type:
1833 *Encoelites mertensii* STERNB., vol. II, 5/6, p. 33, pl. 3, fig. 2

Type designated formally by Andrews (1955).
Jurassic; Germany, Solnhofen
For more details see *mertensii*

***Equisetites* STERNB. 1833**

1833 *Equisetites* STERNB., vol. II, 5/6, p. 43, nom. cons. (Doweld 2013e)
≡1827 *Oncyclogenatum* K.D.KOENIG in Murchison, p. 300

Type:
1833 *Equisetites muensteri* STERNB., vol. II, 5/6, p. 43, pl. 16, figs 1-3, 4, 5, typ. cons. (Doweld, 2013e)

Type designated by Harris (1931). Syntypes in coll. Palaeontological Museum, Munich (Bayerische Staatssammlung für Paläontologie und Geologie) briefly revised by Jung and Knobloch (1972). LECTOTYPE of *Equisetites muensteri* STERNB. 1833 designated by J. Kvaček and Straková (1997), No SNBSB-BSPG AS VII 393, coll. Palaeontological Museum, Munich (Bayerische Staatssammlung für Paläontologie und Geologie).
Jurassic, Liassic; Germany, Strullendorf near Bamberg
For more details see *muensteri*

***Favularia* STERNB. 1825**

1825 *Favularia* STERNB., p. vol. I, 4, tent. p. 13

Type:
1825 *Favularia elegans* STERNB., vol. I, 4, p. 44, tent. p. 14, pl. 52, fig. 4

Type designated by Dawson (1866). The type specimen(s) presently missing.
Carboniferous; Germany, Wettin
For more details see *elegans*

***Flabellaria* STERNB. 1821**

1821 *Flabellaria* STERNB., vol. I, 2, p. 32, nom. illeg., Art. 53.1 (non *Flabellaria* CAVANILLES 1790, p. 436)
≡1952 *Exflabellaria* LAMOTTE, p. 159, substitute name for *Flabellaria* STERNB. 1821

Type:
1821 *Flabellaria raphifolia* STERNB., vol. I, 2, p. 32, pl. 21, fig. right
≡1823b *Palmacites raphifolius* (STERNB.) STERNB. ex BRONGN., p. 359

Type of *Flabellaria* STERNB. 1821 designated formally by Andrews (1955). HOLOTYPE of *Flabellaria raphifolia* STERNB., No AS I 778, coll. Palaeontological Museum, Munich (Bayerische Staatssammlung für Paläontologie und Geologie), revised by Jung (1974).
Type of *Exflabellaria* LAMOTTE 1952. Its type designated formally by Andrews (1955) as *Flabellaria raphifolia* STERNB. 1821.
Paleogene; Austria, Häring
For more details see *raphifolia*

***Germaria* C.PRESL in Sternberg 1838**

1838 *Germaria* C.PRESL in Sternberg, vol. II, 7/8, p. 188, nom. rej. (Doweld 2013a) (non *Germaria* C.PRESL 1849, p. 221, nom. illeg., Art. 53.1)

Type:
1838 *Germaria elymiformis* C.PRESL in Sternberg, vol. II, 7/8, p. 188, pl. 59, figs 1a, 1b, 2–9, nom. rej. (Doweld 2014a)

Type designated formally by Andrews (1955), confirmed by Doweld (2013a). LECTOTYPE of *Germaria elymiformis* C.PRESL in Sternberg 1838 designated by Doweld (2014a), No SNSB-BSPG AS VII 403, coll. Bayerische Staatssammlung für Paläontologie und Geologie, No ?, coll. Oberfränkisches Erdgeschichtliches Museum Bayreuth, Germany (part and counterpart are housed in two different collections).
Jurassic; Germany, Bayreuth (“*Baruthium*”)
For more details see *elymiformis*

Goepertia C.PRESL in Sternberg 1838

1838 *Goepertia* C.PRESL in Sternberg, vol II, 7/8, p. 120, nom. illeg., Art. 53.1 (non *Goepertia* NEES 1831, p. 337 nec

Goepertia GRISEBACH 1862, p. 141, nom. illeg., Art. 53.1)

Type:

1838 *Goepertia polypodioides* C.PRESL in Sternberg, vol II, 7/8, p. 120, pl. 50, fig. 1a

≡1948 *Pecopteris polypodioides* (C.PRESL in Sternberg) NĚMEJC, pp. 1, 5, nom. illeg., Art. 53.1

1948 “*Goepertia*” *polypodioides* (C.PRESL in Sternberg) NĚMEJC, p. 8, pl.1, figs 6, 7

Type designated formally by Andrews (1955). HOLOTYPE of *Goepertia polypodioides* C.PRESL in Sternberg 1838, No. E 161, coll. National Museum, Prague.

Carboniferous; Bohemia, Plasy

For more details see ***polypodioides***

Gutbieria C.PRESL in Sternberg 1838

1838 *Gutbieria* C.PRESL in Sternberg, vol. II, 7/8, p. 116

Type:

1838 *Gutbieria angustiloba* C.PRESL in Sternberg, vol. II, 7/8, p. 116, pl. 33, figs 13a–e, nom. illeg., Art. 52.1

≡1836 *Cyattheites asterocarpoides* STERNB. in Göppert, p. 327

≡1936 *Phlebopteris angustiloba* (C.PRESL in Sternberg) HIRMER et HÖRHAMMER, p. 26, pl. 6, figs 1–4, text-fig. 5.3

Type designated by Corda (1845). Type material is presently missing.

Jurassic, Liassic; Germany, Strullendorf (“Strahlendorf”)

J. Kvaček and Straková (1997) did not notice that the text in C. Presl in Sternberg 1838, p. 116, below the name “*Gutbieria*”, indicates the diagnosis for the genus is the same as for the species.

For more details see ***angustiloba***

Haliserites STERNB. 1833

1833 *Haliserites* STERNB., vol. II, 5/6, p. 34 (non *Haliserides* SCHIMP. 1869, p. 184, nom. illeg., Art. 53.1)

Type:

1833 *Haliserites reichii* STERNB., vol. II, 5/6, p. 34, pl. 24, fig. 7

Type designated formally by Andrews (1955), confirmed by Knobloch (1978). The type material of *Haliserites reichii* STERNB. 1833 available in the coll. National Museum, Prague.

Cretaceous, Cenomanian; Germany, Niederschöna (“Shoena”)

For more details see ***reichii***

Halymenites STERNB. 1833

1833 *Halymenites* STERNB., vol. II, 5/6, p. 29

Type:

1833 *Halymenites vermiculatus* STERNB., vol. II, 5/6, p. 29, pl. 5, fig. 3

Halymenites schnitzleinii STERNB. 1833 was formally designated a type by Andrews (1955). It is interpreted here as a branch of a conifer *Brachiphyllum*. J. Kvaček and Straková (1997) suggested *Halymenites vermiculatus* STERNB. 1833 as a type; it could potentially represent an ichno-taxon.

Jurassic; Germany, Solnhofen

For more details see ***vermiculatus***

Huttonia STERNB. 1837

1837 *Huttonia* STERNB., p. 69 (non *Huttonia* E.GROVE et G.STURT 1887, p. 142, nom. illeg., Art. 53.1)

Type:

1837 *Huttonia spicata* STERNB., p. 63, pl. 1, fig. 1, 2-4

Type designated formally by Andrews (1955), confirmed by J. Kvaček and Straková (1997) and Libertín and Bek (2004). LECTOTYPE designated by J. Kvaček and Straková (1997), No E 74ab, coll. National Museum, Prague.

Carboniferous; Bohemia, Vranovice (“Wranowitz”) near Radnice
For more details see *spicata*

***Juglandites* STERNB. 1825**

- 1825 *Juglandites* STERNB., vol. I, 4, tent. p. 40, (nom. nud.) nom. inval., Art. 32.1
=1840 *Juglandites* STERNB. ex ENDL., p. 1127, nom. illeg., Art. 53.1 (non *Juglandites* BERGER 1832, p. 29)
“Type”:
=1822b *Juglans nux-taurinensis* BRONGN., p. 65, pl. 6, fig. 6

Juglandites STERNB. was validly published first by Endlicher (1840, p. 1127), but the name *Juglandites* was already employed by Berger (1832, p. 29) for the leaf impression (fern *Juglandites castaneaefolius* H.BERGER = *Clathropteris* sp. indet.) from the Jurassic of Germany.

“Type”, formally, but invalidly, designated by Andrews (1955).
Neogene, Miocene; Italy, Torino

***Knorria* STERNB. 1825**

- 1825 *Knorria* STERNB., vol. I, 4, tent. p. 37
≡1823 *Lepidolepis* STERNB., vol. I, 3, p. 35, 39 pro parte
Type:
1823 *Lepidolepis imbricata* STERNB., vol. I, 3, p. 39, pl. 27
≡1825 *Knorria imbricata* (STERNB.) STERNB., vol. I, 4, tent. p. 37

Type designated by Miller (1889).
Carboniferous; Germany, Magdeburg
For more details see *imbricata*

***Laccopteris* C.PRESL in Sternberg 1838**

- 1838 *Laccopteris* C.PRESL in Sternberg, vol. II, 7/8, p. 115
≡1836 *Asterocarpus* GÖPP., p. 172 pro parte
Type:
1838 *Laccopteris elegans* C.PRESL in Sternberg, vol. II, 7/8, p. 115, pl. 32, figs 8a_{1,2,3}, b, c, nom. illeg., Art. 52.1
≡1836 *Asterocarpus lanceolatus* STERNB. in Göppert, p. 382

Type designated formally by Andrews (1955). One syntype of *Laccopteris elegans* C.PRESL in Sternberg 1838, coll. Palaeontological Museum, Munich (Bayerische Staatssammlung für Paläontologie und Geologie).
Jurassic, Liassic; Germany, Steindorf near Bamberg
For more details see *elegans*

***Lepidodendron* STERNB. 1820**

- 1820 *Lepidodendron* STERNB., vol. I, 1, tent. p. 23
Type:
non designatus

Designation of the type has been a matter of discussion for several decades. Andrews (1955) formally designated *Lepidodendron dichotomum* STERNB. 1820 as a type, J. Kvaček and Straková (1997) proposed *Lepidodendron obovatum* STERNB. 1820 as a type. Lately Álvarez-Vázquez and Wagner (2014) suggested *Lepidodendron acuelatum* STERNB. 1820 as a type. The type material of all three above-mentioned species is in the collection of the National Museum, Prague. The genus needs revision.
Carboniferous; Bohemia, Radnice

***Lepidophloios* STERNB. 1825**

- 1825 *Lepidophloios* STERNB., vol. I, 4, tent. p. 13, orth. cons. (Wang 2007), nom. cons. (Doweld 2013f)

Type:

- 1820 *Lepidodendron laricinum* STERNB., vol. I, 1, p. 23, pl. 11, figs 2–4
≡1825 *Lepidophloios laricinum* (STERNB.) STERNB., vol. I, 4, tent. p. 13

Type designated by Dawson (1866). LECTOTYPE of *Lepidodendron laricinum* STERNB. 1820, designated by Z. Kvaček and J. Kvaček (1992, p. 41, pl. 1, fig. 2), No E 4747, coll. National Museum, Prague.

Carboniferous; Bohemia, Vranovice near Radnice

For more details see ***laricinum***

Lepidolepis STERNB. 1823

- 1823 *Lepidolepis* STERNB., vol. I, 3, p. 35, 39

Type:

- 1823 *Lepidolepis syringoides* STERNB., vol. I, 3, p. 36, pl. 31, fig. 2
≡1823 *Lepidolepis dubia* STERNB., vol. I, 3, p. 39, pl. 31, fig. 2, alternative name, Art. 36.3

Type designated by J. Kvaček and Straková (1997).

From two species originally included in the genus *Lepidolepis* STERNB. 1823, only *L. syringoides* (≡ *L. dubia*) remains in this genus. Sternberg (1825) moved the species *L. imbricata* to the genus *Knorria* STERNB. 1825.

Andrews (1955) did not follow the decision of Sternberg (1825), who restricted the genus *Lepidolepis* only to the species *L. syringoides* STERNB. (≡ *L. dubia* STERNB.).

Carboniferous; Germany, Magdeburg

For more details see ***syringoides***

Linopteris C.PRESL in Sternberg 1838

- 1838 *Linopteris* C.PRESL in Sternberg, vol. II, 7/8, p. 167

- ≡1835 *Dicyopteris* GUTBIER, p. 63, nom. illeg., Art. 53.1

Type:

- 1838 *Linopteris gutbieriana* C.PRESL in Sternberg, vol. II, 7/8, p. 167, nom. illeg., Art. 52.1

- ≡1835 *Dicyopteris bronniartii* GUTBIER, p. 63, pl. 11, figs 7, 9, 10

Type designated formally by Andrews (1955). Type material (Nos 176/129, No 176/129(2), 176/129(3)) is available in the collection of Technische Universität, Bergakademie Freiberg. *Dicyopteris* GUTBIER 1835, nom. illeg., Art. 53.1 (non *Dicyopteris* J.V.LAMOUR. 1809, nom. cons.) does not concur to *Linopteris* C.PRESL in Sternberg 1838.

Carboniferous; Germany, Zwickau

For more details see ***gutbieriana***

Lomatofloyos CORDA in Sternberg 1838

- 1838 *Lomatofloyos* CORDA in Sternberg, vol. II, 7/8, p. 206

Type:

- 1838 *Lomatofloyos crassicaule* CORDA in Sternberg, vol. II, 7/8, p. 206, pl. 66, figs 10–14, pl. 68, fig. 20

Type designated formally by Andrews (1955). Unfigured material available in coll. National Museum, Prague.

Carboniferous; Bohemia, Chomle near Radnice

For more details see ***crassicaule***

Muensteria STERNB. 1833

- 1833 *Muensteria* STERNB., vol. II, 5/6, p. 31

Type:

- 1833 *Muensteria vermicularis* STERNB., vol. II, 5/6, p. 32, pl. 1, fig. 3

Type designated formally by Andrews (1955).

Jurassic; Germany, Solnhofen

For more details see ***vermicularis***

Musaeites C.PRESL in Sternberg 1838

1838 *Musaeites* C.PRESL in Sternberg, vol. II, 7/8, p. 191

Type:

1838 *Musaeites primaevus* C.PRESL in Sternberg, vol. II, 7/8, p. 191, pl. 39, fig. 6

Type designated formally by Andrews (1955). HOLOTYPE of *Musaeites primaevus* C.PRESL in Sternberg 1838, No E 108, coll. National Museum, Prague.

Carboniferous; Bohemia, Krušovice ("Kruschowitz")

For more details see ***primaevus***

Myriophyllites STERNB. ex F.J.KRÜGER 1825b

1823 *Myriophyllites* STERNB., vol. I, 3, p. 36, 39, (nom. nud.) nom. inval., Art. 41.1

≡1825b *Myriophyllites* STERNB. ex J.F.KRÜGER, p. 64, nom. illeg., Art. 52.1 (non *Myriophyllites* ARTIS 1825, p. 12 nec *Myriophyllites* UNGER 1842, p. 44, nom. illeg., Art. 53.1)

Type:

1825b *Myriophyllites dubius* STERNB. ex J.F.KRÜGER, p. 65, nom. illeg., Art. 52.1 (≡ 1825 *Bechera myriophylloides* STERNB., vol. I, 4, tent. p. 30)

1823 *Myriophyllites dubius* STERNB. vol. I, 3, p. 36, 39, pl. 31, fig. 4, nom. inval., Art. 43.1

Carboniferous; Great Britain, Durham

For more details see ***dubius***

Noeggerathia STERNB. 1821

1821 *Noeggerathia* STERNB., vol. I, 2, p. 28, 33

Type:

1821 *Noeggerathia foliosa* STERNB., vol. I, 2, p. 28, 33, pl. 20

Type designated formally by Andrews (1955), confirmed by Šimůnek and Bek (2003). HOLOTYPE of *Noeggerathia foliosa* STERNB. 1821, No E 122a, b, (part and counterpart), coll. National Museum, Prague.

Carboniferous; Bohemia, environs of Beroun

For more details see ***foliosa***

Steffensia subgen. ***Notopteris*** C.PRESL in Sternberg 1838

1838 *Steffensia* subgen. *Notopteris* C.PRESL in Sternberg, vol. II, 7/8, p. 122

Type:

1836 *Aspidites silesiacus* GÖPP., p. 364, pl. 27, pl. 39, fig. 1

≡1838 *Steffensia (Notopteris) silesiaca* (GÖPP.) C.PRESL in Sternberg, vol. II, 7/8, p. 122

Carboniferous; Poland, Walbrzych ("Waldenburg")

Nymphaeites STERNB. 1825

1825 *Nymphaeites* STERNB., vol. I, 4, p., tent. p. 39, (nom. nud.) nom. inval., Art. 41.1

≡1857 *Nymphaeites* STERNB. ex CASPARY, p. 199

Type:

1857 *Nymphaeites arethusae* (BRONGN.) STERNB. ex CASPARY, p. 200

≡1822b *Nymphaea arethusae* BRONGN., p. 74, pl. 6, fig. 9

Type designated formally by Andrews (1955).

Paleogene, Oligocene; France, Longjumeau near Paris

Pecopteris subgen. ***Orthopleuria*** C.PRESL in Sternberg 1838

1838 *Pecopteris* subgen. *Orthopleuria* C.PRESL in Sternberg, vol. II, 7/8, p. 157

Type:

- 1838 *Pecopteris (Orthopleuria) arguta* C.PRESL in Sternberg, vol. II, 7/8, p. 157, nom. illeg., Art. 53.1 (non *Pecopteris arguta* STERNB., vol. I, 4, tent. p. 19)
≡1834a *Pecopteris arguta* STERNB.; Brongniart, vol. I, 7, p. 303, pl. 108, figs 3, 4
≡1836 *Polypodites elegans* Göpp., p. 344, pl. 15, fig. 10

Carboniferous; France, St. Etienne

For more details see **arguta**

Partschia C.PRESL in Sternberg 1838

- 1838 *Partschia* C.PRESL in Sternberg, vol. II, 7/8, p. 115

Type:

- 1838 *Partschia brongniartii* C.PRESL in Sternberg, vol. II, 7/8, p. 116
≡1834 *Pecopteris hemitelioides* BRONGN. pro parte, vol. I, 9, p. 314, pl. 108, fig. 2, three upper pinnae (non pl. 108, fig. 1, fig. 2 four lower pinnae)

Type designated formally by Andrews (1955).

Carboniferous; Germany, Saarbrücken

For more details see **brongniartii**

Phialopteris C.PRESL in Sternberg 1838

- 1838 *Phialopteris* C.PRESL in Sternberg, vol. II, 7/8, p. 114

- =1914 *Norimbergia* GOTCHAN, p. 19

Type:

- 1838 *Phialopteris tenera* C.PRESL in Sternberg, vol. II, 7/8, p. 114, pl. 32, figs 1a_{1,2}–d, nom. illeg., Art. 52.1
≡1836 *Asterocarpus heterophyllus* STERNB. in Göppert, p. 382

Type designated formally by Andrews (1955). LECTOTYPE of *Phialopteris tenera* C.PRESL in Sternberg 1838 designated by van Konijnenburg-van Cittert et al. (2018), not by Jung et Knobloch (1972), No BT 760, coll. Oberfränkisches Museum Bayreuth, No SNSB-BSPG AS VII 402, coll. Palaeontological Museum, Munich (Bayerische Staatssammlung für Paläontologie und Geologie), (part and counterpart are housed in two different collections).

Jurassic, Liassic; Germany, Reundorf (“Rheindorf”)

For more details see **tenera** and **heterophyllus**

Phillipsia C.PRESL in Sternberg 1838

- 1838 *Phillipsia* C.PRESL in Sternberg, vol. II, 7/8, p. 206, nom. rej. (non *Phillipsia* BERK. 1881, p. 388, nom. cons.)

Type:

- 1833 *Lepidodendron harcourtii* WITHAM, p. 51, pls 12, 13

- ≡1838 *Phillipsia harcourtii* (WITHAM) C.PRESL in Sternberg, vol. II, 7/8, p. 206

Type designated formally by Andrews (1955).

Carboniferous; United Kingdom, unknown locality

Polypodiolites STERNB. 1823

- 1823 *Polypodiolites* STERNB., vol. I, 3, p. 36, 39

Type:

- 1823 *Polypodiolites pectiniformis* STERNB., vol. I, 3, p. 39, pl. 33, fig. 1

Type designated formally by Andrews (1955). HOLOTYPE of *Polypodiolites pectiniformis* STERNB. 1823, No J.21796, coll. University Museum Oxford. The genus is listed in Sternberg (1823, p. 39) and described only briefly as “*descriptio generico-specifica*” in Sternberg (1823, p. 36): “... ein gefiedertes Blatt, das wir für ein Farrenkraut halten, ohne es genau bestimmen zu können vom *Polypodium pectinatum*, dem es am meisten ähnlich sieht, ist es verschieden.” That can be translated as follows: “... a pinnate leaf that can be assigned to a fern, without being able to determine it exactly, it differs from *Polypodium pectinatum*, to which it looks most similar.”

Jurassic, Bathonian; United Kingdom, Stonesfield
For more details see *pectiniformis*

***Polystichites* C.PRESL in Sternberg 1838**

1838 *Polystichites* C.PRESL in Sternberg, vol. II, 7/8, p. 117, nom. rej. (Doweld 2013d)
=1849 *Coniopteris* BRONGN., vol. 13, p. 75, nom. cons.

Type:

1836 *Pecopteris murrayana* BRONGN., vol. I, 10, p. 358, pl. 126, figs 1–5, pl. 137, figs 4–5
≡1838 *Polystichites murrayana* (BRONGN.) C.PRESL in Sternberg, vol. II, 7/8, p. 117

Type designated formally by Andrews (1955). *Coniopteris* BRONGN. 1849 was conserved against *Polystichites* C.PRESL in Sternberg 1838 by Doweld (2013d).

Jurassic; United Kingdom, Scarborough

***Preissleria* C.PRESL in Sternberg 1838**

1838 *Preissleria* C.PRESL in Sternberg, vol. II, 7/8, p. 192

Type:

1838 *Preissleria antiqua* C.PRESL in Sternberg, vol. II, 7/8, p. 192, pl. 33, figs 5, 10

Type designated formally by Andrews (1955). Type material is missing in the collection of the Palaeontological Museum, Munich (Bayerische Staatssammlung für Paläontologie und Geologie).

Jurassic, Liassic; Germany, Steinsdorf (“Steindorf”) near Bamberg

For more details see *antiqua* and *distans*

***Protopteris* STERNB. 1838**

1838 *Protopteris* STERNB., vol. II, 7/8, p. 169

Type:

1820 *Lepidodendron punctatum* STERNB., vol. 1, 1, p. 20, tent. p. 23, pl. 4, figs 1, 2, pl. 8, figs 2A_{a, b} (detail)
≡1838 *Protopteris punctata* (STERNB.) STERNB., vol. II, 7/8, p. 170, pl. 65, figs 1–3

Type designated formally by Andrews (1955), confirmed by Greguš et al. (2013). HOLOTYPE of *Protopteris punctata* (STERNB.) STERNB. 1838, No F 1471, coll. National Museum, Prague.

Cretaceous, Cenomanian; Bohemia, Kounice

For more details see *punctata*

***Rabdotus* C.PRESL in Sternberg 1838**

1838 *Rabdotus* C.PRESL in Sternberg, vol. II, 7/8, p. 193

Type:

1833 *Calamites verrucosus* STERNB., vol. I, 5/6, p. 50, pl. 13

≡1838 *Rabdotus verrucosus* (STERNB.) C.PRESL in Sternberg, vol. II, 7/8, p. 193

Type designated formally by Andrews (1955). HOLOTYPE of *Rabdotus verrucosus* (STERNB.) C.PRESL in Sternberg 1838, No E 5736, coll. National Museum, Prague.

Carboniferous; Bohemia, Svináře

For more details see *verrucosus*

***Reussia* C.PRESL in Sternberg 1838**

1838 *Reussia* C.PRESL in Sternberg, vol. II, 7/8, p. 125, nom. illeg., Art. 53.1 (non *Reussia* ENDL. 1836, p. 139, nom. cons.)

≡1836 *Scolopendrites* GÖPP., p. 276 (non *Scolopendrites* LESQ. 1854, p. 425, nom. illeg., Art. 53.1)

≡1844 *Crematopteris* SCHIMP. et A.MOUG., p. 73, nom. illeg., Art. 52.1

Type:

- 1828c *Filicites scolopendroides* BRONGN., p. 443, pl. 18, fig. 2
≡1838 *Reussia scolopendroides* (BRONGN.) C.PRESL in Sternberg, vol. II, 7/8, p. 125, ("scolopendrioides")
≡1836 *Scolopendrites jussieui* GÖPP., p. 276, nom. illeg., Art. 52.1
≡1844 *Crematopteris typica* SCHIMP. et A.MOUG., p. 74, pl. 35, nom. illeg., Art. 52.1

Type designated formally by Andrews (1955).

Triassic; France, Sulz-les-Bains

Rhodea C.PRESL in Sternberg 1838

- 1838 *Rhodea* C.PRESL in Sternberg, vol. II, 7/8, p. 109, nom. illeg., Art. 53.1 (non *Rhodea* ENDL. 1836, p. 155, ort. var.
Rohdea ROTH 1821, p. 196)
≡1959 *Rhodeopteridium* W.ZIMM., pp. 280, 272, nom. inval., Art. 41.5
=1962 *Rhodeopteridium* W.ZIMM. ex R.H.WAGNER, footnote to captions pl. 29, fig. 5
Type:
1829 *Sphenopteris trichomanoides* BRONGN., p. 182, pl. 48, fig. 3
≡1838 *Rhodea trichomanoides* (BRONGN.) C.PRESL in Sternberg, vol. II, 7/8, p. 109

Type designated formally by Andrews (1955).

Carboniferous; France, Anzin near Valenciennes

Rhodomelites STERNB. 1833

- 1833 *Rhodomelites* STERNB., vol. II, 5/6, p. 25, nom. illeg., Art. 52.1
≡1822d *Fucoides* BRONGN., p. 26
Type:
1822a *Fucoides strictus* C.AGARDH ex BRONGN., p. 237, pl. 3, fig. 3
≡1833 *Rhodomelites strictus* (BRONGN.) STERNB., vol. II, 5/6, p. 25

Type designated formally by Andrews (1955). *Rhodomelites* STERNB. is based on the same type as *Fucoides* BRONGN.
1822d.

Cretaceous; France, Île-d'Aix ("Aix") near La Rochelle

Rhytidolepis STERNB. 1821

- 1821 *Rhytidolepis* STERNB., vol. I, 2, p. 32, nom. rej.
≡1822a *Sigillaria* BRONGN., p. 209, nom. cons.
Type:
1821 *Rhytidolepis ocellata* STERNB., vol. I, 2, p. 25, tent. p. 32, pl. 15

Type designated formally by Andrews (1955). HOLOTYPE of *Rhytidolepis ocellata* STERNB. 1821, No E 82, coll.
National Museum, Prague. However, *Sigillaria* BRONGN. 1822a is conserved against *Sigillaria* RAF. ex NUTT. 1819 and
also against *Rhytidolepis* STERNB. 1821.

Carboniferous; Bohemia, Svinná
For more details see *ocellata*

Rotularia STERNB. 1821

- 1821 *Rotularia* STERNB., vol. I, 2, p. 30, 33, nom. rej.
≡1828a *Sphenophyllum* BRONGN., p. 68, nom. cons.
Type:
1821 *Rotularia marsiliaefolia* STERNB., vol. I, 2, pp. 30, 33
≡1804 sine nomine Schlotheim, p. 57, pl. 2, fig. 24
≡1820 *Palmacites verticillatus* SCHLOTH., p. 396, nom. inval., Art. 13.1 (f)
1825 *Rotularia marsiliaefolia* STERNB.; Sternberg, vol. I, 4, tent. p. 32

Type designated formally by Andrews (1955). Unfigured syntypes available in the collections of Museum für Naturkunde,
Berlin and the National Museum, Prague.

Carboniferous/Permian; Germany, Gotha and Wettin
For more details see ***marsiliaefolia***

Sagenopteris C.PRESL in Sternberg 1838

1838 *Sagenopteris* C.PRESL in Sternberg, vol. II, 7/8, p. 164

=1836 *Acrostichites* GÖPP., p. 174, 284 pro parte

=1836 *Woodwardites* GÖPP., p. 175, 288 pro parte

Type:

1838 *Sagenopteris rhoifolia* C.PRESL in Sternberg, vol. II, 7/8, p. 165, pl. 35, fig. 1, nom. illeg., Art. 52.1

=1836 *Acrostichites inaequilaterus* STERNB. in Göppert, p. 287

Type designated formally by Andrews (1955), confirmed by Harris (1933), but questioned by Cleal and Rees (2003), who suggested *Sagenopteris acutiloba* C.PRESL in Sternberg 1838 as a type. Type material of *Sagenopteris rhoifolia* C.PRESL in Sternberg 1838 is missing in the collection of the Palaeontological Museum, Munich (Bayerische Staatssammlung für Paläontologie und Geologie).

Jurassic, Liassic; Germany, Strullendorf (“Strahlendorf”)

For more details see ***rhoifolia*** and ***acuminata***

Schlotheimia STERNB. 1821

1821 *Schlotheimia* STERNB., vol. I, 2, p. 28, 32, nom. illeg., Art. 53.1 (non *Schlotheimia* BRID. 1812, pp. 16, 27)

=1825a *Casuarinites* SCHLOTH. ex J.F.KRÜGER, p. 140

=1828a *Asterophyllites* BRONGN., p. 159, nom. cons.

Type:

1821 *Schlotheimia arborescens* STERNB., vol. I, 2, p. 32

1804 sine nomine; Schlotheim, p. 30, 32, pl. 1, figs 1, 2, pl. 2, fig. 3

=1820 *Casuarinites equisetiformis* SCHLOTH., p. 397, nom. inval., Art. 13.1 (f)

=1825a *Casuarinites equisetiformis* SCHLOTH. ex J.F.KRÜGER, p. 141, nom. illeg., Art. 52.1

Type designated formally by Andrews (1955).

Carboniferous/Lower Permian; Germany, Manebach, Wettin

Sciadipterus STERNB. 1838

1838 *Sciadipterus* STERNB., vol. II, 7/8, p. 117

Type:

1838 *Sciadipterus radnicensis* C.PRESL in Sternberg, vol. II, 7/8, p. 118, pl. 37, fig. 1, 1b

Type designated formally by Andrews (1955). Type material presently missing in the collection of the National Museum, Prague.

Carboniferous; Bohemia, Brásy (“Brzas”)

For more details see ***radnicensis***

Scitaminites STERNB. 1825

1825 *Scitaminites* STERNB., vol. I, 4, tent. p. 36, nom. rej. (Doweld 2013c)

=1832 *Psaronius* COTTA, p. 27, nom. cons.

=1838 *Cromyodendron* C.PRESL in Sternberg, vol. II, 7/8, p. 193, nom. illeg., Art. 52.1

Type:

1825 *Scitaminites musaeformis* STERNB., vol. I, 4, tent. p. 36

1820 sine nomine; Sternberg, vol. I, 1, p. 20, pl. 5, fig. 2a, b

=1845 *Psaronius musaeformis* (STERNB.) CORDA, p. 94, pl. 45, fig. 3

Type designated formally by Andrews (1955). HOLOTYPE of *Scitaminites musaeformis* STERNB. 1825, No E 205, coll. National Museum, Prague. *Psaronius* COTTA 1832 was conserved against *Scitaminites* STERNB. 1825 by Doweld (2013c).

Carboniferous; Bohemia, Radnice

For more details see ***musaeformis***

Sphaerococcites STERNB. 1833

- 1833 *Sphaerococcites* STERNB., vol. II, 5/6, p. 28
≡1869 *Sphaerococcides* SCHIMPER, p. 163, nom. illeg., Art. 52.1
Type:
1833 *Sphaerococcites ciliatus* STERNB., vol. II, 5/6, p. 28, pl. 4, fig. 1

Type designated formally by Andrews (1955). HOLOTYPE of *Sphaerococcites ciliatus* STERNB. 1833, No E 6a, b, coll. National Museum, Prague.
Jurassic; Germany, Solnhofen
For more details see *ciliatus*

Pecopteris subgen. ***Sphenopeccopteris*** C.PRESL in Sternberg 1838

- 1838 *Pecopteris* subgen. *Sphenopeccopteris* C.PRESL in Sternberg, vol. II, 7/8, p. 138
Type:
1825 *Pecopteris angustissima* (STERNB.) STERNB., vol. I, 4, tent. p. 18
≡1838 *Pecopteris (Sphenopeccopteris) angustissima* (STERNB.) C.PRESL in Sternberg, vol. II, 7/8, p. 138
≡1938a *Corynepteris angustissima* (STERNB.) NĚMEJC, p. 15, pl. 3, fig. 8

Type designated by J. Kvaček and Straková (1997). HOLOTYPE of *Pecopteris angustissima* STERNB. 1825, No E 123, coll. National Museum, Prague.
Carboniferous; Bohemia, Svinář
For more details see *angustissima*

Staphylopteris C.PRESL in Sternberg 1838

- 1838 *Staphylopteris* C.PRESL in Sternberg, vol. II, 7/8, p. 174
Type:
1828b *Filicites polybotria* BRONGN., p. 44 (“*polybotrya*”)
1837a *Filicites polybotria* BRONGN., vol. I, 11, p. 390, pl. 137, fig. 6 (“*polybotrya*”)
1838 *Staphylopteris polybotrya* (BRONGN.) C.PRESL in Sternberg, vol. II, 7/8, p. 176

Type designated formally by Andrews (1955).
Staphylopteris C.PRESL in Sternberg (1838) is described only briefly as “*descriptio generico-specifica*” by C. Presl in Sternberg (1838) as follows: “*An inflorescentia seu panicula fructifera cuiusdam Botrychio vel Aneimiae analogue plantae*”, which means: “An inflorescence or paniculate fructification similar to certain ferns of *Botrychium* or *Anemia*”. Although J. Kvaček and Straková (1997) considered the genus invalid, new evaluation considering not only the short description, but also the figure in Brongniart (1837a, pl. 137, fig. 6) argues for valid publication of the genus by C. Presl in Sternberg (1838).
Paleogene, Oligocene; France, Armissan

Steinhauera C.PRESL in Sternberg 1838

- 1838 *Steinhauera* C.PRESL in Sternberg, vol. II, 7/8, p. 202, nom. illeg., Art. 53.1 (non *Steinhauera* GÖPP. 1835, p. 246)
Type:
1838 *Steinhauera subglobosa* C.PRESL in Sternberg, vol. II, 7/8, p. 202, pl. 57, figs 1–4

Type designated formally by Andrews (1955), confirmed by Knobloch et al. (1996). LECTOTYPE of *Steinhauera subglobosa* C.PRESL in Sternberg 1838 designated by J. Kvaček and Straková (1997), No G 2117, coll. National Museum, Prague. *Steinhauera* GÖPP. 1835 based on *Steinhauera sternbergii* GÖPP. 1835 has priority over *Steinhauera* C.PRESL in Sternberg 1838, unless the letter is conserved.
Paleogene, Eocene; Bohemia, Staré Sedlo
For more details see *subglobosa*

Strephopteris C.PRESL in Sternberg 1838

- 1838 *Strephopteris* C.PRESL in Sternberg, vol. II, 7/8, p. 120, nom. rej. (Doweld 2018b)
Type:
1838 *Strephopteris ambigua* C.PRESL in Sternberg, vol. II, 7/8, p. 120, pl. 50, fig. 2a, b

≡1934b *Aciteca ambigua* (C.PRESL in Sternberg) NĚMEJC, p. 3, pl. 1, figs 1, 2

Type designated formally by Andrews (1955). HOLOTYPE of *Strephopteris ambigua* C.PRESL in Sternberg 1838, No E 162a,b, coll. National Museum, Prague.
Carboniferous; Bohemia, Plasy
For more details see *ambigua*

***Syringodendron* STERNB. 1820**

1820 *Syringodendron* STERNB., vol. I, 1, pp. 22, 24
Type:
1820 *Syringodendron pes-capreoli* STERNB., vol. I, 1, p. 22, tent. p. 24, pl. 13, fig. 2

Type designated by Miller (1889). HOLOTYPE of *Syringodendron pes-capreoli* STERNB. 1820, No E 83, coll. National Museum, Prague.
Carboniferous; Bohemia, Žacléř (“Schatzlar”)
For more details see *pes-capreoli*

***Taxodites* C.PRESL in Sternberg 1838**

1838 *Taxodites* C.PRESL in Sternberg, vol. II, 7/8, p. 204 (non *Taxodites* UNG. in Endlicher 1842, nom. illeg., Art. 53.1)
Type:
1838 *Taxodites tenuifolius* C.PRESL in Sternberg, vol. II, 7/8, p. 204, pl. 33, fig. 4

Type designated formally by Andrews (1955).
We suggest that the short description by Presl in Sternberg (1838) “*Ramuli foliage illis cypressus valde analogi*” meaning “Leafy twigs analogous to *Cypressus*” characterises the genus adequately, and we therefore consider *Taxodites* C.PRESL in Sternberg 1838 to be validly published.
Jurassic, Liassic; Germany, Reindorf (“Reindorf”) near Bamberg

***Thuites* STERNB. 1825**

1825 *Thuites* STERNB., vol. I, 4, tent. p. 38
≡1828a *Thuytes* BRONGN., p. 109 (orthographic variant), nom. illeg., Art. 53.1
Type:
1825 *Thuites alienus* STERNB., vol. I, 4, p. 40, tent. p. 38, pl. 45, fig. 1
≡1828a *Juniperites alienus* (STERNB.) BRONGN., p. 108
≡1971 *Sequoia aliena* (STERNB.) ERW.KNOBLOCH, p. 44

Type designated formally by Andrews (1955), confirmed by Knobloch (1971). LECTOTYPE of *Thuites alienus* STERNB. 1825 designated by Greguš and J. Kvaček (2015), No F 3675, coll. National Museum, Prague.
Cretaceous, Turonian; Bohemia, Smečno (“Schmetschna”)
For more details see *alienus*

***Tithymalites* C.PRESL in Sternberg 1838**

1838 *Tithymalites* C.PRESL in Sternberg, vol. II, 7/8, p. 205
Type:
1838 *Tithymalites biformis* C.PRESL in Sternberg, vol. II, 7/8, p. 205, pl. 53, figs 1–6

Type designated formally by Andrews (1955). HOLOTYPE of *Tithymalites biformis* C.PRESL in Sternberg 1838, No E 112, coll. National Museum, Prague.
Carboniferous; Bohemia, Radnice (“Radnitz”)
For more details see *biformis*

***Variolaria* STERNB. 1820**

1820 *Variolaria* STERNB., vol. I, 1, p. 24, nom. illeg., Art. 53.1 (non *Variolaria* PERS. 1794, p. 23, nom. cons., non *Variolaria* BULL. 1791, nom. rej., Jorgensen 2018)

≡1822a *Stigmaria* BRONGN., p. 228

Type:

1820 *Variolaria ficoides* STERNB., vol. I, 1, p. 22, tent. p. 24, pl. 12, figs 1–3

≡1822a *Stigmaria ficoides* (STERNB.) BRONGN., p. 228

Type designated formally by Andrews (1955). HOLOTYPE *Variolaria ficoides* STERNB. 1820, No E 80, coll. National Museum, Prague.

Carboniferous; Bohemia, Radnice (“Radnitz”)

For more details see *ficoides*

***Volkmannia* STERNB. 1825**

1825 *Volkmannia* STERNB., vol. I, 4, tent. p. 29, nom. illeg., Art. 53.1 (non *Volkmannia* JACQ. 1798, p. 48)

Type:

1825 *Volkmannia distachya* STERNB., vol. I, 4, tent. p. 30, pl. 48, figs 3a, b

≡1911 *Palaeostachya distachya* (STERNB.) JONGM., p. 191, 335, text-figs 296–299

Type designated formally by Andrews (1955). Type material is presently missing.

Carboniferous; Bohemia, Svinná

For more details see *distachya*

***Walchia* STERNB. 1825**

1825 *Walchia* STERNB., vol. I, 4, tent. p. 22

≡1938 *Lebachia* FLORIN, p. 23, nom. illeg., Art. 52.1

Type:

1825 *Walchia piniformis* SCHLOTH. ex STERNB., vol. I, 4, tent. p. 22

≡1820 *Lycopodiolites piniformis* SCHLOTH., p. 415, pro parte pl. 23, fig. 1a (non pl. 23, fig. 1b) nom. inval., Art. 13.1 (f)

1889 *Walchia piniformis* STERNB.; Miller, p. 149

Type designated by Römer (1879), confirmed (re-selected) by Miller (1889). HOLOTYPE of *Walchia piniformis* SCHLOTH. ex STERNB. 1825, No 1988/128a, b, coll. Museum für Naturkunde, Berlin.

Carboniferous; Germany, Streitgern (“Frauengraben”) near Klein-Schmalkalden

For more details see *piniformis*

***Zamites* C.PRESL in Sternberg 1838**

1838 *Zamites* C.PRESL in Sternberg, vol. II, 7/8, p. 195, nom. illeg., Arts 52.1 and 53.1 (non *Zamites* BRONGN. 1828a, pp. 91, 94, nom. cons. prop. (Zijlstra and van Konijnenburg-van Cittert 2020); non *Zamites* ZAKLINSK. 1957, p. 92, nom. illeg., Art. 53.1)

Type:

1822b *Endogenites echinatus* BRONGN., p. 43, pl. 5, fig. 2

≡1838 *Zamites bronniartii* C.PRESL in Sternberg, p. 196, nom. illeg., Art. 52.1

Type proposed in IFPNI (2020). Type material housed in Muséum National d’Histoire Naturelle, Paris (IFPNI 2020). Paleogene, Paleocene; France, Vailly-sur-Aisne (“Vailly”) near Soissons

***Zonarites* STERNB. 1833**

1833 *Zonarites* STERNB., vol. II, 5/6, p. 34

≡1869 *Zonarides* SCHIMP., p. 186, nom. illeg., Art. 52.1

≡1828d *Fucoides* subgen. *Dictiotytes* BRONGN., vol. I, 1, p. 67

Type:

1823a *Fucoides flabellaris* BRONGN., p. 311, pl. 20, fig. 5

≡1833 *Zonarites flabellaris* (BRONGN.) STERNB., vol. II, 5/6, p. 34

≡1828d *Fucoides* (*Dictiotytes*) *flabellaris* BRONGN. vol. I, 1, p. 67, pl. 8, fig. 5

Type designated formally by Andrews (1955).

Paleogene, Eocene; Italy, Monte Bolca

Names of species and infraspecific taxa proposed in works by K. M. Sternberg

The following section of the catalogue lists the species and infraspecific taxa published by K. M. Sternberg, in *Versuch einer geognostich – botanischen Darstellung der Flora der Vorwelt* (FVW 1820–1838), by Sternberg in Göppert and by Sternberg (1827, 1837), and Karel (Carolus) B. Presl and August Karl J. Corda in FWV (1838) in alphabetical order of their species epithets. The nomenclatural and basic taxonomic classification has been done for each taxon. The invalidly published or illegitimate names are given with the article number of the International Code of Nomenclature for algae, fungi, and plants (Turland et al. 2018).

Each record is arranged in the following order:

Epithet

Full scientific name with reference

Synonymy

Museum number	Kind of nomenclatural type
Plate where the specimen is figured in the catalogue	
Systematic position	
Brief description of the plant remains	
Preservatio	Notes on labels
Age	Original number
Lithostratigraphy	Origin of the specimen
Locality	
Notes	
Collection	

Explanation:

Epithet:

Original epithet published by Sternberg or his collaborators. If the original spelling of the epithet has been changed according to the Code, the original spelling is in quotation marks and in parenthesis. Example: *julianiformis* (“*julianaeformis*”)

Full scientific name with reference:

In cases of nomenclatural types, it is the basionym; only Arabic numbers (except numbers of volumes) are used in citations; the abbreviation “tent.” means *Tentamen florae primordialis*, e.g., the systematic part attached to parts 1–4 of FVW; the specimen under discussion is shown in bold or outlined font; in cases of syntypes, the inventory number is included in parenthesis following the number of the figure.

Synonymy:

Nomenclatural synonyms are marked “≡”, taxonomical synonyms are marked “=” or “~” if it is an opinion of only some authors. When the taxon has been revised in the present work, the name is marked “herein”; bold print in synonymy highlights the name in current use of the fossil plant; plates

and figures printed in bold font refer to the type (figured) specimen under discussion; in the case of missing specimens, or those of unknown repository, the digit of their figures is shown in outlined font; the abbreviation “Art.” means article (followed by a number) of the Code (Turland et al. 2018); if the original spelling differs from the Code due to an orthographical variant, the original spelling is in quotation marks and in parenthesis; lectotypes or neotypes designated by previous authors are attached – example: 1974 *Alnus julianiformis* (STERNB.) KVAČEK et HOLÝ, p. 368, **pls 1–4** (NEOTYPE of *Phyllites julianiformis* STERNB. 1823, vol. I., 3: 37, 39, pl. 36, fig. 2 – No G 2133); if Sternberg and his collaborators published additional illegitimate epithets based on the same specimen, the complete epithet record is included only with the legitimate epithet; if the taxa are considered as taxonomic synonyms, the complete synonymy is listed only with the commonly used or the most important taxa.

Specimens figured or mentioned in earlier publications, specified as types for newly designed taxa by K. M. Sternberg and his collaborators are marked as “○”. Sternberg’s own specimens or material he had on loan (not specimens figured in older literature) are always preferred for the description and selection of synonymy in the catalogue. In the cases where Sternberg and his collaborators did not have the material at their disposal, we present direct references to those taxa or specimens that were published (in written text or illustrations) by earlier workers.

Museum number:

If “non vidimus” is attached, the specimen has not been personally examined by the authors.

Nomenclatural type:

It is often difficult to determine how many specimens Sternberg and his collaborators had at their disposal while writing the protologue, and in such cases the nomenclatural type cannot be easily ascertained. The following principle is used to determine the nomenclatural type:

If the author in the protologue describes and depicts only one specimen, we consider it the holotype (Art.9.1). If the holotype or the syntypes defined above are missing, or their repositories are unknown, they are listed as “holotype missing” or “syntypes missing”. If the taxon is designated without a figure of the type specimen and we have at our disposal the specimen or specimens labelled with an original taxon name (basionym) used by Sternberg or his collaborators, we simply use the terms “holotype” or “syntypes”. If the unfigured type specimen is missing or its repository is unknown, it is stated: “holotype or syntypes missing”. In some cases, when the type collection included two or more unfigured specimens (syntypes) and the revising author was convinced that the type specimens of the revised taxon belong to the type collection, he selected the lectotype, even if only one type specimen was depicted by Sternberg or his collaborators. This practice has been respected in our catalogue (e.g., 1838 *Zamites acuminatus* C.PRESL in Sternberg, vol. II, 7/8, p. 199, **pl. 43, fig. 2**; 1972 *Zamites acuminatus* C.PRESL in Sternberg; Jung and Knobloch, p. 109, (LECTOTYPE *Zamites acuminatus* C.PRESL in Sternberg). In certain cases, when the holotype or syntypes are missing, we

have recorded unfigured specimens. Being unable to define whether they really come from the type collection, we have only mentioned them as a possible source for future selection of a neotype.

Authors of Latin names:

Authors of Latin names follow standards defined by the International Plant Names Index (IPNI 2020). If the authors names are absent there we alternatively follow International Fossil Plant names Index (IFPNI 2020) or the Plant Fossil Names Registry (PFNR 2020).

Plate where the specimen is figured in the catalogue:

The plates show only specimens housed in the National Museum, Prague.

Systematic position:

If the affinity of fossils is unknown, no statement is attached.

Preservation:

If we are unable to determine whether the specimen is a compression or impression, we use the wording compression/impression.

Age:

Stratigraphy if it is known to us, is adopted from published literature.

Lithostratigraphy:

Abbreviations used are "F." for formation and "M." for member.

Locality:

Contemporary names of localities are used. Those used by Sternberg and his collaborators that differ in more than one letter are attached in original spelling in quotation marks and in parenthesis – example Germany, Strullendorf ("Strahendorf"); if a name of the type locality has not been traced, it is also given in quotation marks.

Origin of the specimen:

If the specimen was originally a part of Sternberg's collection, it is designated: coll. Sternberg. If not, the name of the collection holder from whom Sternberg obtained or borrowed the specimen is mentioned. Abbreviation NCM is used for original numbers (Text-fig. 1) made by F. X. Zippe for K. M. Sternberg when the material was successively transferred to the museum collection. NCM numbers are one of the key characters used for identification of the material of the Sternberg collection.

Collection:

Collections mentioned in the publications by K. M. Sternberg, from which type specimens are damaged or missing are listed in square brackets.

If the holotype or syntypes are missing or of unknown repository, the epithet record is usually consequently simplified, and only the kind of nomenclatural type, synonymy, age, locality and notes are attached.

brachyloba holotype or syntype missing

1825 *Alethopteris brachyloba* STERNB., vol. I, 4, tent. p. 21

Carboniferous; Bohemia, Žacléř (“Schatzlar”)

brardii holotype missing

1838 *Taeniopteris brardii* C.PRESL in Sternberg, vol. II, 7/8, p. 141

○1831b *Odontopteris obtusa* BRONGN., vol. I, 6, p. 255 pro parte, pl. 78, fig. 3 (non pl. 78, fig. 4)

Carboniferous; France, Terrasson near Limoges

brongniartiana

syntypes missing

1838 *Pecopteris brongniartiana* C.PRESL in Sternberg, vol. II, 7/8, p. 160

○1835a *Pecopteris dentata* BRONGN.; Lindley and Hutton, vol. II, p. 201, pl. 154

○1836 *Pecopteris dentata* var. β BRONGN., vol. I, 10, p. 346, pl. 124, figs 1–4

=1828a *Pecopteris gracilis* BRONGN., p. 58, nom. inval., Art. 32.1 et Art. 44.1

=1825 *Filicites plumosus* ARTIS, p. 17, pl. 17

=1827a *Pecopteris plumosa* (ARTIS) STERNB., p. 137

=1886 *Dactylotheca plumosa* (ARTIS) KIDST., pp. 128, 259

=1877 *Senftenbergia plumosa* (ARTIS) STUR, p. 187 (293)

1924 *Dactylotheca plumosa* (ARTIS) KIDST.; Kidston, vol. V, p. 383, pls 92, 93, pl. 94, figs 1–3, pl. 95, figs 1–3, pl. 96, figs 2, 3, pl. 110, figs 1, 2, pl. 112, figs 2, 2a, text-fig. 32

2001 *Senftenbergia plumosa* (ARTIS) STUR; Bek and Pšenička, p. 218, (pls 1–7)

Carboniferous; France, (“*Anzin prope Valenciennes?*”) Anzin mines in Valenciennes, Nord-Pas-de-Calais Coalfield, France (?), Germany, (“*Geislautern prope Saarbrück?*”) Geislautern near Saarbrücken (?), Spain, (“*Sama prope Oviedo, Hispaniae?*”) Sama near Oviedo (?); United Kingdom, Newcastle-upon-Tyne

C. Presl in Sternberg (1838) proposed *P. brongniartiana* C.PRESL in Sternberg basing this name on two syntypes (Bronniart 1836, pl. 124, figs 1–4 and Lindley and Hutton 1835a, pl. 154).

brongniartii

holotype

1838 *Aspidiaria brongniartii* C.PRESL in Sternberg, vol. II, 7/8, p. 182, nom. illeg., Art. 52.1

≡1837b *Sigillaria densifolia* BRONGN., vol. I, 12, p. 423, pl. 158, fig. 3

Carboniferous; Germany, Berghaupten near Offenburg

coll. Collections de paléontologie, Jardin des sciences de l’Université de Strasbourg (Museum de Strasbourg) No Q 136 (Bronniart 1837b, p. 423, Pátová 2001).

brongniartii

1833 *Calamites brongniartii* STERNB., vol. II, 5/6, p. 48

○1828e *Calamites cruciatus* STERNB.; Brongniart, p., vol. I, 2, p. 128, pl. 19 (non *Calamites cruciatus* STERNB. 1825, vol. I, 4, tent. p. 27, pl. 49, fig. 5)

≡1893 *Calamites cruciatus* STERNB. (infraspec. tax.) *septenarius* STERZEL var. *brongniartii* (STERNB.) STERZEL, p. 58

No MNHN.F.128

holotype

Equisetopsida, Calamostachyales

cast of stem

coll. Brongniart

Carboniferous; France, Vitry le Francois (“Litry”)

coll. Muséum national d’Histoire naturelle, Paris

brongniartii

holotype missing

1825 *Culmites brongniartii* STERNB., vol. I, 4, tent. p. 28, nom. illeg., Art. 52.1

≡1822c *Culmites nodosus* BRONGN. in Cuvier, vol. III, p. 358, pl. 8, fig. 1 (bound in vol. II)

○1822a *Culmites nodosus* BRONGN., p. 215, pl. 1, fig. 1 (inverted image)

Tertiary; Mont-Rouge, near Paris, France.

The specimen is the type of the generic name *Culmites* BRONGN. (Cleal and Thomas 2018).

- brongniartii** holotype missing
- 1833 *Halymenites brongniartii* STERNB., vol. II, 5/6, p. 30
○ 1828d *Fucoides encoelioides* BRONGN., vol. I, 1, p. 55 pro parte, pl. 6, fig. 2 (non *Fucoides encoelioides* BRONGN. 1828d, vol. I, 1, p. 55, pl. 6, fig. 1 ≡ *Muensteria clavata* STERNB. 1833, vol. II, 5/6, p. 31, nom. illeg., Art. 52.1)
- =1826 *Gorgonia dubia* GOLDFUSS, p. 18, pl. 7, fig. 1
Jurassic; Germany, Solnhofen
- brongniartii** holotype missing
- 1833 *Neuropteris brongniartii* STERNB., vol. II, 5/6, p. 73
○ 1831a *Neuropteris heterophylla* (BRONGN.) STERNB.; Brongniart, vol. I, 5, p. 243, pl. 72, fig. 2 (non pl. 71)
- Carboniferous; Belgium, Charleroi; Germany, Saarbrücken
- brongniartii** holotype missing
- 1838 *Partschia brongniartii* C.PRESL in Sternberg, vol. II, 7/8, p. 116
○ 1834b *Pecopteris hemitelioides* BRONGN., vol. I, 9, p. 314 pro parte, pl. 108, fig. 2, three upper pinnae (non pl. 108, fig. 1, fig. 2 four lower pinnae)
- =1869 *Pecopteris hemitelioides* BRONGN.; Schimper, vol. I, p. 511
=1940 *Astrotheca hemitelioides* (BRONGN.) NĚMEJC, p. 22
1962 *Pecopteris hemitelioides* BRONGN.; Jongmans and Dijkstra, p. 2290
Carboniferous; Germany, Saarbrücken
- Type of the generic name *Partschia* C.PRESL in Sternberg 1838.
- brongniartii**
- 1833 *Sphenopteris brongniartii* STERNB., vol. II, 5/6, p. 57
○ 1830 *Sphenopteris stricta* STERNB.; Brongniart, vol. I, 4, p. 208, pl. 48, fig. 2 (non *Sphenopteris stricta* STERNB. 1825, vol. I, 4, p. 45, tent. p. 15, pl. 56, fig. 2)
- ≡1836 *Hymenophyllites brongniartii* (STERNB.) GÖPP., p. 258
=1825 *Sphenopteris artemisiaefolia* STERNB., vol. I, 4, p. 44, tent. p. 15, pl. 54, fig. 1
=1825 *Sphenopteris stricta* STERNB., vol. I, 4, p. 45, tent. p. 15, pl. 56, fig. 2
=1869 *Eremopteris artemisiaefolia* (STERNB.) SCHIMP., vol. I, p. 416, pl. 30, fig. 4
1828a *Sphenopteris stricta* STERNB.; Brongniart, p. 50
- No Pb618 holotype
Pteridospermopsida
terminal part of bipinnate leaf
impression
Carboniferous coll. Thomas Brown
United Kingdom, Farme Colliery, Rutherglen, [South of Glasgow]
coll. Hunterian Museum, University of Glasgow
- brongniartii** holotype missing
- 1838 *Zamites brongniartii* C.PRESL in Sternberg, vol. II, 7/8, p. 196, nom. illeg., Art. 52.1
≡1822b *Endogenites echinatus* BRONGN., p. 43, pl. 5, fig. 2

1822c *Endogenites echinatus* BRONGN.; Brongniart, p. 356, pl. 10, fig. 1
1825 *Endogenites echinatus* BRONGN.; Sternberg, vol. I, 4, tent. p. 36
2018 *Endogenites echinatus* BRONGN.; Cleal and Thomas, p. 12, text-fig. 1a

Eocene; France, Vailly-sur-Aisne (“Vailly”) near Soissons

The specimen is type of the generic name *Endogenites* BRONGN. 1822a (Cleal and Thomas 2018).

bronnii holotype missing

1833 *Caulerpites bronnii* STERNB., vol. II, 5/6, p. 23, pl. 26

≡1838 *Lycopodites bronnii* (STERNB.) STERNB., vol. II, 7/8, p. 103, pl. 34, fig. 1
1997 *Walchia* sp. indet.; J. Kvaček and Straková, p. 45

Lower Permian; Germany, Birkenfeld near Saarbrücken

Specimens figured in Sternberg 1838, vol. II, 7/8, pl. 34, fig. 1 (No E 1701), figs 2a, b (Nos E 87, E 88) are stored in Sternberg’s collection in the National Museum, Prague.

bronnii syntypes missing

1833 *Equisetites bronnii* STERNB., vol. II, 5/6, p. 46, pl. 21, figs 1–5

=1827 *Calamites arenaceus minor* G.JÄGER, p. 37 pro parte, pl. 4, figs 5, 9 (non pl. 3, figs 1–7, pl. 5, figs 1–3, pl. 6, fig. 1)
=1829 *Equisetum arenaceum* (G.JÄGER) BRONN, p. 74
=1864 *Equisetites arenaceus* (G.JÄGER) SCHENK, p. 59, pl. 7, fig. 2

Triassic, Carnian; Würtenberg (coll. Jäger), Horrenberg (“Horeberg”) near Sinsheim (coll. Brönn)
coll. Staatliches Museum für Naturkunde, Stuttgart – Paläobotanik, damaged in 1944.

bucklandianus holotype

1833 *Caulerpites bucklandianus* STERNB., vol. II, 5/6, p. 22, nom. illeg., Art. 52.1
≡1823 *Thuites articulatus* STERNB., vol. I, 3, pp. 36, 39, pl. 33, fig. 3

=1823 *Thuites divaricatus* STERNB., vol. I, 3, pp. 38, 39, pl. 37, figs 1, 4, pl. 39
=1823 *Thuites expansus* STERNB., vol. I, 3, pp. 38, 39, pl. 38, fig. 1, 2
=1823 *Thuites cupressiformis* STERNB., vol. I, 3, p. 39, pl. 33, fig. 2
=1833 *Caulerpites expansus* STERNB., vol. II, 5/6, p. 22
=1833 *Caulerpites thuiaeformis* STERNB., vol. II, 5/6, p. 22
1904 *Thuites expansus* STERNB.; Seward, p. 142, text-fig. 19, pl. 9, figs 1, 4
=1919 *Brachiphyllum expansum* (STERNB.) SEWARD, p. 317, fig. 754

For more details see ***articulatus***

bucklandii

1823 *Conites bucklandii* STERNB., vol. I, 3, pp. 36, 39, tent. p. 39, pl. 30

≡1828a *Bucklandia squamosa* BRONGN., pp. 125, 128, nom. illeg., Art. 52.1
≡1838 *Cycadites bucklandii* (STERNB.) C.PRESL in Sternberg, vol. II, 7/8, p. 194
≡1842 *Encephalartos bucklandii* (STERNB.) MIQ., p. 60
≡1849 *Cycadeoidea squamosa* (BRONGN.) BRONGN. in d’Orbigny, vol. 13, p. 155, nom. illeg., Art. 52.1
1871 *Bucklandia squamosa* BRONGN.; Phillips, p. 170, text-fig. 29
≡1904 *Cycadeoidea squamosa* (BRONGN.) SEWARD, pp. 80, 109, nom. illeg., Art. 52.1
2003 ***Conites bucklandii*** STERNB.; Cleal and Rees, p. 768, text-fig. 3A
≡2012 *Bucklandia bucklandii* (STERNB.) DOWELD, p. 1132

No J.29202	holotype
Bennettitopsida, Bennettitales	
part of stem	
impression	
Jurassic, Middle Jurassic, Bathonian	
United Kingdom, Stonesfield	leg. Buckland
coll. Oxford University Museum of Natural History	

Type of the generic name *Conites* STERNB. 1823 and generic name *Bucklandia* BRONGN. 1828a (non *Bucklandia* STERNB. 1825). *Conites bucklandii* STERNB. 1823 has priority over *Bucklandia squamosa* BRONGN. 1828a, unless the letter is conserved. The genus *Conites* STERNB. 1823 based on *Conites bucklandii* STERNB. ≡ *Bucklandia squamosa* BRONGN. 1828a belongs to Bennettitales, therefore it cannot be used for cones of conifers (see also Cleal and Rees 2003).

bucklandii

1833 *Odontopteris bucklandii* STERNB., vol. II, 5/6, p. 79, **pl. 23, fig. 2**

≡1838 <i>Zamites bucklandii</i> (STERNB.) C.PRESL in Sternberg, vol. II, 7/8, p. 197, nom. illeg., Art. 53.1 (non <i>Zamites bucklandii</i> (BRONGN.) BRONGN. 1828a, p. 97)	
=1829 <i>Cycadites pectinoides</i> J.PHILLIPS, p. 171, pl. 30, fig. 2

Magnoliopsida, Myrtales, Myricaceae

basal and middle part of leaf

impression

Neogene, lower Miocene NCM 60
 Most Formation coll. Sternberg
 Bohemia, environs of Chomutov (“Komotau”), Most (“Brüx”), Litvínov (“Oberleitersdorf”) cited by Sternberg 1821, p. 29; Chomutov (“Comotovium”), Bílina (“Bilinam”) cited by Sternberg (1825: xxi–xxii).
 coll. National Museum, Prague
 Type of the generic name *Aspleniopteris* STERNB. 1825. There are two unfigured syntypes in the collection of the National Museum, Prague showing two different types of sediment. The specimen No G 7766 (NCM 65, loc. ?) shows yellow-orange claystone and could be from environs of Bílina. The specimen G 7672 (NCM 97, loc. ?) shows sediment similar to the figured specimen, interpreted as environs of Chomutov. Due to the recovery of the two syntypes we designate the figured specimen (G 2113) as the lectotype.

difformis

holotype or syntypes missing

1825 *Calamites difformis* STERNB., vol. I, 4, tent. p. 27, nom. illeg., Art. 52.1
 ○1820 *Calamites gibbosa* SCHLOTH., p. 400, nom. inval., Art. 13.1 (f)
 ≡1823 *Calamites gibbosus* SCHLOTH. ex J.F.KRÜGER, p. 114

Carboniferous/Lower Permian, Gzhelian/Asselian; Germany, Manebach; Poland, Walbrzych (“Waldenburg”)

diffusa

holotype missing

1825 *Bechera diffusa* STERNB., vol. I, 4, tent. p. 30
 ○1821 sine nomine; Sternberg, vol. I, 2, p. 28, pl. 19, fig. 3
 ≡1828a *Asterophyllites diffusus* (STERNB.) BRONGN., p. 159
 =1914 *Asterophyllites equisetiformis* (STERNB.) BRONGN.; Jongmans, p. 107

Carboniferous; Bohemia, Radnice (“Radnitz”)

digitata

1833 *Odontopteris digitata* STERNB., vol. II, 5/6, p. 77, pl. 23, fig. 3

≡1838 *Zamites whitbyensis* C.PRESL in Sternberg, vol. II, 7/8, p. 197, nom. illeg., Art. 52.1
 =1835b *Zamia gigas* LINDL. et HUTTON, p. 45, vol. III, pl. 165
 =1841 *Zamites gigas* (LINDL. et HUTTON) MORRIS, p. 116
 1997 *Zamites gigas* (LINDL. et HUTTON) MORRIS, C. Hill in J. Kvaček and Straková, p. 63, pl. 11, fig. 4

No E 167b	
Pl. 11, fig. 4b	holotype
Bennettitopsida, Bennettitales	
apical part of pinnate leaf	
compression	
Jurassic, Middle Jurassic, Bajocian	NCM 760
United Kingdom, Whitby, Yorkshire	leg. Buckland
coll. National Museum, Prague	

On the same slab together with the holotype of *Odontopteris bucklandii* STERNB. No E 167a. *Odontopteris digitata* STERNB. 1833 has priority over *Zamia gigas* LINDL. et HUTTON 1835b, unless the latter is conserved.

diospyriformis

1823 *Carpolithes diospyriformis* STERNB., vol. I, 3, pp. 37, 39, pl. 37, fig. 6 (“*Carpolites*”)

=?1823 *Carpolithes murchellaeformis* STERNB., vol. I, 3, p. 37, pl. 37, fig. 3 (“*Carpolites*”)
 1825 *Carpolithes diospyriformis* STERNB.; Sternberg, vol. I, 4, tent. p. 40 (“*Carpolites*”)
 1871 *Carpolithes diospyriformis* STERNB.; Phillips, p. 171, diagram 32, fig. 2

1904 *Carpolithes diospyriformis* STERNB.; Seward, p. 128, pl. 12, fig. 12, pl. 13, fig. 7
2003 *Carpolithes diospyriformis* STERNB.; Cleal and Rees, p. 788, pl. 14, fig. 4, **pl. 15, figs 2, 3**

No J.55980 holotype
seed
cast and mould
Jurassic, Middle Jurassic, Bathonian
United Kingdom, Stonesfield
coll. Oxford University Museum of Natural History coll. Buckland

Cleal and Rees (2003) figured the holotype in pl. 15, fig. 2 (however under wrong No – J.1151/J1151a).

diphylla

1838 *Sagenopteris diphylla* C.PRESL in Sternberg, vol. II, 7/8, p. 165, pl. 35, fig. 4
 ◦ 1836 *Acrostichites inaequilaterus* STERNB. in Göppert, p. 287 (pro parte)

=1825 *Filicites nilsonianus* BRONGN., p. 218, pl. 12, fig. 1 ("nilsoniana")
 =1838 *Sagenopteris rhoifolia* C.PRESL in Sternberg, vol. II, 7/8, p. 165, pl. 35, fig. 1, nom. illeg., Art. 52.1
 =1838 *Sagenopteris diphylla* C.PRESL in Sternberg, vol. II, 7/8, p. 165, pl. 35, fig. 4
 =1838 *Sagenopteris semicordata* C.PRESL in Sternberg, vol. II, 7/8, p. 165, pl. 35, fig. 2
 =1838 *Sagenopteris acuminata* C.PRESL in Sternberg, vol. II, 7/8, p. 165, pl. 35, fig. 3
 =1845 *Acrostichites acuminatus* (C.PRESL in Sternberg) UNGER, p. 77.
 =1870 ***Sagenopteris nilsoniana*** (BRONGN.) E.HÉBERT, p. 374
 1933 *Sagenopteris nilsoniana* (BRONGN.) E.HÉBERT; Harris, p. 5, pl. 1, fig. 11, text-figs 1, 2A–F

Jurassic, Liassic; Germany, Strullendorf ("Strahlendorf")

For more details see *acuminata*

disciformis

1825 *Carpolithes disciformis* STERNB., vol. I, 4, tent. p. 40 ("Carpolites")
 ○ 1820 sine nomine; Sternberg, vol. I, 1, pl. 7, fig. 13

1937c *Discinites* sp. indet.; Němejc, p. 2, pl. 1, fig. 6

No E 862	
Pl. 15, fig. 4	holotype

1867 *Podozamites distans* (C.PRESL in Sternberg) C.F.W.BRAUN in Münster; Schenk. p. 159, pl. 35, fig. 10, pl. 36, figs 1–9

1914 *Podozamites distans* (C.PRESL in Sternberg) C.F.W.BRAUN in Münster; Gothan, p. 145, pl. 29, fig. 1

1972 *Zamites distans* C.PRESL in Sternberg; Jung and Knobloch, p. 109

=1838 *Preissleria antiqua* C.PRESL in Sternberg, vol. II, 7/8, p. 192, pl. 33, figs 5, 10

2017 *Podozamites distans* (C.PRESL in Sternberg) C.F.W.BRAUN in Münster; Nosova et al., p. 91, pl. 1, figs **1ab, 2 a, b**, P1. figs 3–10, pl. 2, figs 1–14, fig. 1A, b (LECTOTYPE and EPITYPE)

No AS VII 396a, b	lectotype
Pinopsida	
impression	
leafy branch	
Jurassic, Liassic, Hettangian	
Germany, Strullendorf (“Strahlendorf”) near Bamberg	
part and counterpart	coll. Münster
coll. Bayerische Staatssammlung für Paläontologie und Geologie, München, Germany	

No UU12638	epitype
Pinopsida	
compression	
cuticle preparation	
Jurassic, Liassic, Hettangian	
Germany, Grossbellhofen near Nuremberg	
coll. the Komarov Botanical Institute, St. Petersburg, Russia	

Type of the generic name *Podozamites* C.F.W.BRAUN in Münster 1843. In the opinion of Nosova et al. (2016), the figured specimen considered to be a holotype of *P. distans* is lost. What is available since the last revision by Jung and Knobloch 1972 is a syntype, that is designated by Nosova et al. (2016) as a lectotype. However, Nosova et al. (2016) do not completely rule out the possibility mentioned already by Schenk (1867) and Jung and Knobloch (1972), that Presl’s illustration of the holotype was composed of combinations of a part and counterpart. Material from the same stratigraphic horizon from localities Grossbellhofen near Nuremberg was treated for cuticle analysis and designated as epitype (Nosova et al. 2016).

divaricatus

1823 *Thuites divaricatus* STERNB., vol. I, 3, pp. 38, 39, pl. 37, figs 1, 4, **pl. 39**

Pteridospermopsida	
simply pinnate leaf	
compression	
Carboniferous	
United Kingdom, Radstock near Bath?; Germany, Saarbrücken ("Saarbrück")?	
coll. Natural History Museum, London	

The second syntype mentioned by Sternberg (1825) was collected by Buckland, and is the one figured by De la Beche (1822, p. 45, pl. 7, fig. 2). It comes from the Jurassic Limestone of Axminster in Devonshire. It is interpreted here as a fragment of *Zamites*-type foliage, taxonomically very different from the first syntype studied and figured by Sternberg (1823), and therefore excluded from the synonymy of *Neuropteris flexuosa* STERNB. 1825. The specimen needs revision, but is presently of unknown repository.

In his protologue, Sternberg (1825) indicates the type locality Saarbrücken. This is contradicted by Crookall (1959), who gives the locality as Radstock, although Crookall hedges his assessment with a question mark.

floribunda

holotype or syntypes missing

syntype figured in pl. 32, fig. 1a₂ – unknown repository

Type of the generic name *Phialopteris* C.PRESL in Sternberg.

Göppert (1836) wrongly cited plate and figures; pl. 31, fig. 1a, b, c should be pl. 32, fig. 1a, b, c, d. Jung and Knobloch (1972) claim that Sternberg's name in Göppert is invalid, but this is not correct. The claim arose from the simple mistake (possibly even typographic, or a printing error) of citing plate 31, instead of the correct plate 32. As has already been stated in J. Kvaček and Straková (1997), Sternberg's name is entirely valid.

neotype

Polypodiopsida, Osmundales
frond fragment
?impression/compression
Jurassic, Liassic, Hettangian
Eckersdorf near Bayreuth, Germany
coll. Oberfränkisches Erdgeschichtliches Museum Bayreuth

Doweld (2014a) designated the neotype of *A. imbricata* C.PRESL in Sternberg (coll. Oberfränkisches Erdgeschichtliches Museum Bayreuth, No. 76200) to be the same as the holotype of *S. princeps* C.PRESL in Sternberg arguing by traditional identity of both species.

Doweld (2014a) suggested to conserve *Sphenopteris princeps* C.PRESL in Sternberg 1838 against *Germania elymiformis* C.PRESL in Sternberg 1838, *Alethopteris imbricata* STERNB. in Göppert 1836, and *Pecopteris athyroides* BRONGN. 1836.

imbricata

- 1823 *Lepidolepis imbricata* STERNB., vol. I, 3, pp. 35, 39, pl. 27

≡1825 *Knoria imbricata* (STERNB.) STERNB., vol. 1, 4, tent. p. 37

Carboniferous; Russia, Orenburg

Type of the generic name *Knoria* STERNB. 1823.

The original type material comes from Orenburg in Russia (“Umgegend von Ohrenburg, an Asiens Vorsaum” – Sternberg 1823, p. 35), the second locality mentioned in Sternberg 1825 is Magdeburg (“*Germaniae ad Magdeburg*” – Sternberg 1825). The additional material (Nos K 379, K 380), stored in Sternberg’s collection in the National Museum, Prague, comes from Magdeburg and is available for selection of a neotype.

J. Kvaček and Straková (1997) used this name as validly published, although it was based solely on an illustration, because precise illustration itself can be considered to meet the requirements of valid publication (Art. 38.7, Art. 38.9). Němejc (1937b) correctly used the epithet “*irregularis*” to a species that is a synonym of *Sphenopteris inaequalis* STERNB. The species really belongs to the genus *Dicksonites* STERZEL as ascertained by Němejc (1937b) – hence the combination by J. Kvaček and Straková (1997) *Dicksonites inaequalis* (STERNB.) J.KVAČEK et STRAKOVÁ 1997. However, after detailed study of archived labels associated with *S. inaequalis* (stating *S. asplenoides*), it was realised *S. inaequalis* is probably a younger nomenclatural synonym of *S. asplenoides*.

Triassic, Jurassic; Germany, Sinsheim and Strullendorf (“*ad Sinsheim Ducat. Badensis et ad Schrullendorf Franconiae*” – Göppert 1836, “Strahlendorf” – C. Presl in Sternberg 1838).

Sternberg in Göppert (1836) based *Acrostichites inaequilaterus* on all figures 1–4 of the plate 35 published by Sternberg (1838). However, later C. Presl in Sternberg (1838) described each of the fossils figured in plate 35 under separate names, specifying *S. rhoifolia* C.PRESL in Sternberg 1838 as being a synonym of *Acrostichites inaequilaterus* STERNB. in Göppert 1836.

Polypodiopsida, Polypodiidae

impression

isolated shortly petiolate pinna

Jurassic, Liassic

Germany, Steinsdorf (“Steindorf”) near Bamberg coll. Münster

coll. B. S. München, Germany

Type of the generic name *Laccopteris* C.PRESL in Sternberg 1838. A poorly preserved specimen determined by Jung and Knobloch (1972) only as *Phlebopteris* sp. Hirmer and Hörhammer (1936) did not even identify this taxon with the family Mattoniaceae. The illustration (C. Presl in Sternberg 1838, pl. 32, fig. 8) shows one slab bearing three pinnae of *Laccopteris elegans* and three undescribed pinnae. It is probable that the painter drew several isolated specimens on one slab. The specimen is poorly preserved and according to Jung and Knobloch (1972) not adequate to serve as a type of the generic name. Syntypes figured in pl. 32, fig. 8a_{2,3} – unknown repository.

laricinum

1820 *Lepidodendron laricinum* STERNB., vol. I, 1, p. 22, tent. p. 23, **pl. 11, figs 2** (E 4747), **3** (?E 5512), 4

≡1822 *Lychnophorites laricinum* (STERNB.) D.C.MART., p. 144

≡1825 *Lepidophloios laricinum* (STERNB.) STERNB., vol. I, 4, tent. p. 13

=1838 *Calamoxylon cycadeum* CORDA in Sternberg, vol. II, 7/8, p. 195, pl. 54, figs 8, 9

=1838 *Zamites cordae* C.PRESL in Sternberg, vol. II, 7/8, p. 196, pl. 55, figs 1–9

1964 *Lepidophloios laricinum* (STERNB.) STERNB.; Crookall, p. 307, pl. 74, figs 2–6, pl. 75, fig. 6, pl. 78, figs 1, 6, **text-figs 98** (E 4747), 100c (“*Lepidophloios laricinus*”)

1992 *Lepidophloios laricinum* (STERNB.) STERNB.; Z. Kvaček and J. Kvaček, p. 41, **pl. 1, fig. 2** (E 4747, LECTOTYPE of *Lepidodendron laricinum* STERNB. 1820, pl. 11, fig. 2)

mughiformis

holotype missing

1838 *Pinites mughiformis* C.PRESL in Sternberg, vol. II, 7/8, p. 201, pl. 49, fig. 5

Cretaceous; Poland, Kup Maly (“Salzbrunn”) near Opole

multistriatus

1838 *Carpolithes multistriatus* C.PRESL in Sternberg, vol. II, 7/8, p. 208, pl. 39, figs 1 (E 1206 LECTOTYPE), 2 (K 346) (“*Carpolites*”)

Carpolithes multistriatus C.PRESL in Sternberg 1838 was a heterogenous taxon consisting of *Holcospermum multistriatum* (C.PRESL in Sternberg) CROOKALL 1938, p. 28 = *Carpolithes multistriatus* C.PRESL in Sternberg 1838, vol. II, 7/8, p. 208, pl. 39, fig. 1 and ichnogen. et ichnosp. indet = *Carpolithes multistriatus* C.PRESL in Sternberg, vol. II, 7/8, p. 208, pl. 39, fig. 2, after lectotypification only the lectotype represents this species.

J. Kvaček and Straková (1997) used this name as validly published, although it was based solely on an illustration, because precise illustration itself can be considered to meet the requirements of valid publication (Art. 38.7, Art. 38.9).

First taxon:

1838 *Carpolithes multistriatus* C.PRESL in Sternberg, vol. II, 7/8, p. 208, pl. 39, fig. 1

≡1880 *Rhabdocarpus multistriatus* (C.PRESL in Sternberg) LESQ., vol. II, p. 578, pl. 85, figs 22, 23

≡1914 *Platyspermum multistriatum* (C.PRESL in Sternberg) E.ARBER, p. 96, pl. 6, fig. 9

≡1938 *Holcospermum multistriatum* (C.PRESL in Sternberg) CROOKALL, p. 28 (“*Holcosperma*”)

1976 *Holcospermum multistriatum* (C.PRESL in Sternberg) CROOKALL; Crookall, p. 937, pl. 172, fig. 2

1997 *Holcospermum multistriatum* (C.PRESL in Sternberg) CROOKALL; J. Kvaček and Straková, p. 107, pl. 40, fig. 3 (LECTOTYPE)

Kladno F., Radnice M.

NCM 8??7

Bohemia, Radnice ("Radnitz")

coll. Sternberg

coll. National Museum, Prague

Type of the generic name *Lepidodendron* STERNB. 1820 (suggested by J. Kvaček and Straková 1997).

obscurus

holotype missing

1838 *Carpolithes obscurus* C.PRESL in Sternberg, vol. II, 7/8, p. 208, **pl. 58, fig. ultima dextra** (lower right)

Paleogene, ?Oligocene; Bohemia, Staré Sedlo, ?Počerny ("In schichto lignitum ad Altsattel")

Although the specimen is not available, even the illustration does not meet the structure of the Staré Sedlo sandstone. More probably the term "in schichto lignitum" argues for the carpological Oligocene locality Počerny (see *Carpolithes venosus* C.PRESL in Sternberg 1838, Holý 1984). J. Kvaček and Straková (1997) used this name as validly published, although it was based solely on an illustration, because precise illustration itself can be considered to meet the requirements of valid publication (Art. 38.7, Art. 38.9).

Thy syntype of *Cunninghamites oxycedrus* C.PRESL in Sternberg (1838, pl. 48, figs 3a, b) figured by J. Kvaček and Straková (1997) was mistakenly donated to the National Museum by Erwin Knobloch. After the publication of the syntype in J. Kvaček and Straková (1997, pl. 3, fig. 1), it was discovered that syntype catalogued in the collections of the National Museum, Prague under No NM F2612 comes from the Senckenberg Naturhistorische Sammlungen Dresden, to which it was subsequently returned. The epitype showing a cuticle with epidermal micromorphology was selected by Kunzmann (2001). Bosma et al. (2012) erroneously indicated in the text the syntype MMG Ns 180 as the lectotype. Syntype figured in pl. 48, fig. 3c – unknown repository.

No 1981/803	syntype
Pteridospermopsida, Callistophytale	
part of tripinnate leaf	
compression/impression	
Carboniferous/Lower Permian, Gzhelian/Asselian	Quenstedt's K. π260
Germany, (?) Manebach	
(non "Duttweiler" see Barthel 1980b, p. 284)	
coll. Museum für Naturkunde, Berlin	

Saarbrücken and Wettin are mentioned as type localities in publications by both Scholtheim (1820) and Sternberg (1825). One of the syntypes of *Pecopteris plukenetii* STERNB. 1825 is situated on the same slab as *Pecopteris arguta* STERNB. 1825: No 1981/803. Another, unfigured, syntype of *P. plukenetii* STERNB. (No K 378, loc. Wettin) is stored in Sternberg's collection in the National Museum, Prague, and was undoubtedly donated to Sternberg by Scholtheim.

plumula

Jurassic, Tithonian	
Germany, Daiting near Solnhofen	
coll. National Museum, Prague	

The specimen is not figured in Sternberg (1833), due to a mistake in print. In Sternberg (1833, pl. 5, fig. 2) there is an illustration of *C. sertularia* STERNB. 1833. The specimen No K 349 was originally cited in Sternberg (1833, p. 22) as appearing in pl. 8, fig. 1. The errata sheet (“Berichtigung”) then corrected this to pl. 5, fig. 2. However, neither is correct – the specimen does appear in either figure, and in fact, does not seem to be figured in FVW at all.

princeps

 terminal part of entire-margined, emarginate leaf
 impression
 Jurassic, Middle Jurassic, Bathonian
 United Kingdom, Stonesfield
 coll. Oxford University Museum of Natural History

Phyllites scitamineaformis STERNB. 1823 has priority over *Taeniopterus vittata* BRONGN. 1828a, unless the earlier is rejected (Art. 56.1). Cleal and Rees (2003) argued that the short description “ein Blattstück einer ascitaminea als ein Farrenkraut zu seyn” (a leaf of Scitaminea [zingiberoid plant] resembling a fern) published by Sternberg (1823) cannot be considered as a protologue, but the description was associated with a very precise illustration, which by itself, even without a detailed description can be considered to meet the requirements of valid publication (Art. 38.7, Art. 38.9). Cleal and Rees (2003) proposed the specimen J.23456 as a lectotype of *Taeniopterus vittata* BRONGN. 1831b. (Designation of the lectotype was not necessary because there is only one specimen – the holotype). Later, Doweld (2013b) in his proposal realised that *Taeniopterus vittata* was validly published by Brongniart (1828a), but as a conserved type he proposed a specimen figured by Brongniart (1831b, pl. 82, fig. 2, No. MNHN.F.522 from Mus. Natl. d’Hist. Nat., Paris). However, the specimen comes from Scarborough, Yorkshire, which is stratigraphically different from the type locality and therefore unacceptable. The proposal contained a number of other problems and was rejected by the nomenclatural commission. In their counterproposal, Zijlstra et al. (2016) suggested *Taeniopterus vittata* BRONGN. 1828a as a type and the specimen figured by Sternberg (1823, pl. 37, fig. 2) as its holotype. However, rejection of *Phyllites scitaminea* STERNB. 1823 based on the same specimen was not specified as is required by the code (Art. 14.4, Art. 56.1).

Plates

Figures of type specimens are depicted with a scale bar for each specimen. They are arranged on plates, mostly in alphabetical order by epithet (as far as was possible, given publishing constraints due to image shapes and sizes). Figures showing newly re-covered type specimens and other (non-type) material published by Sternberg and his co-workers are at the end.

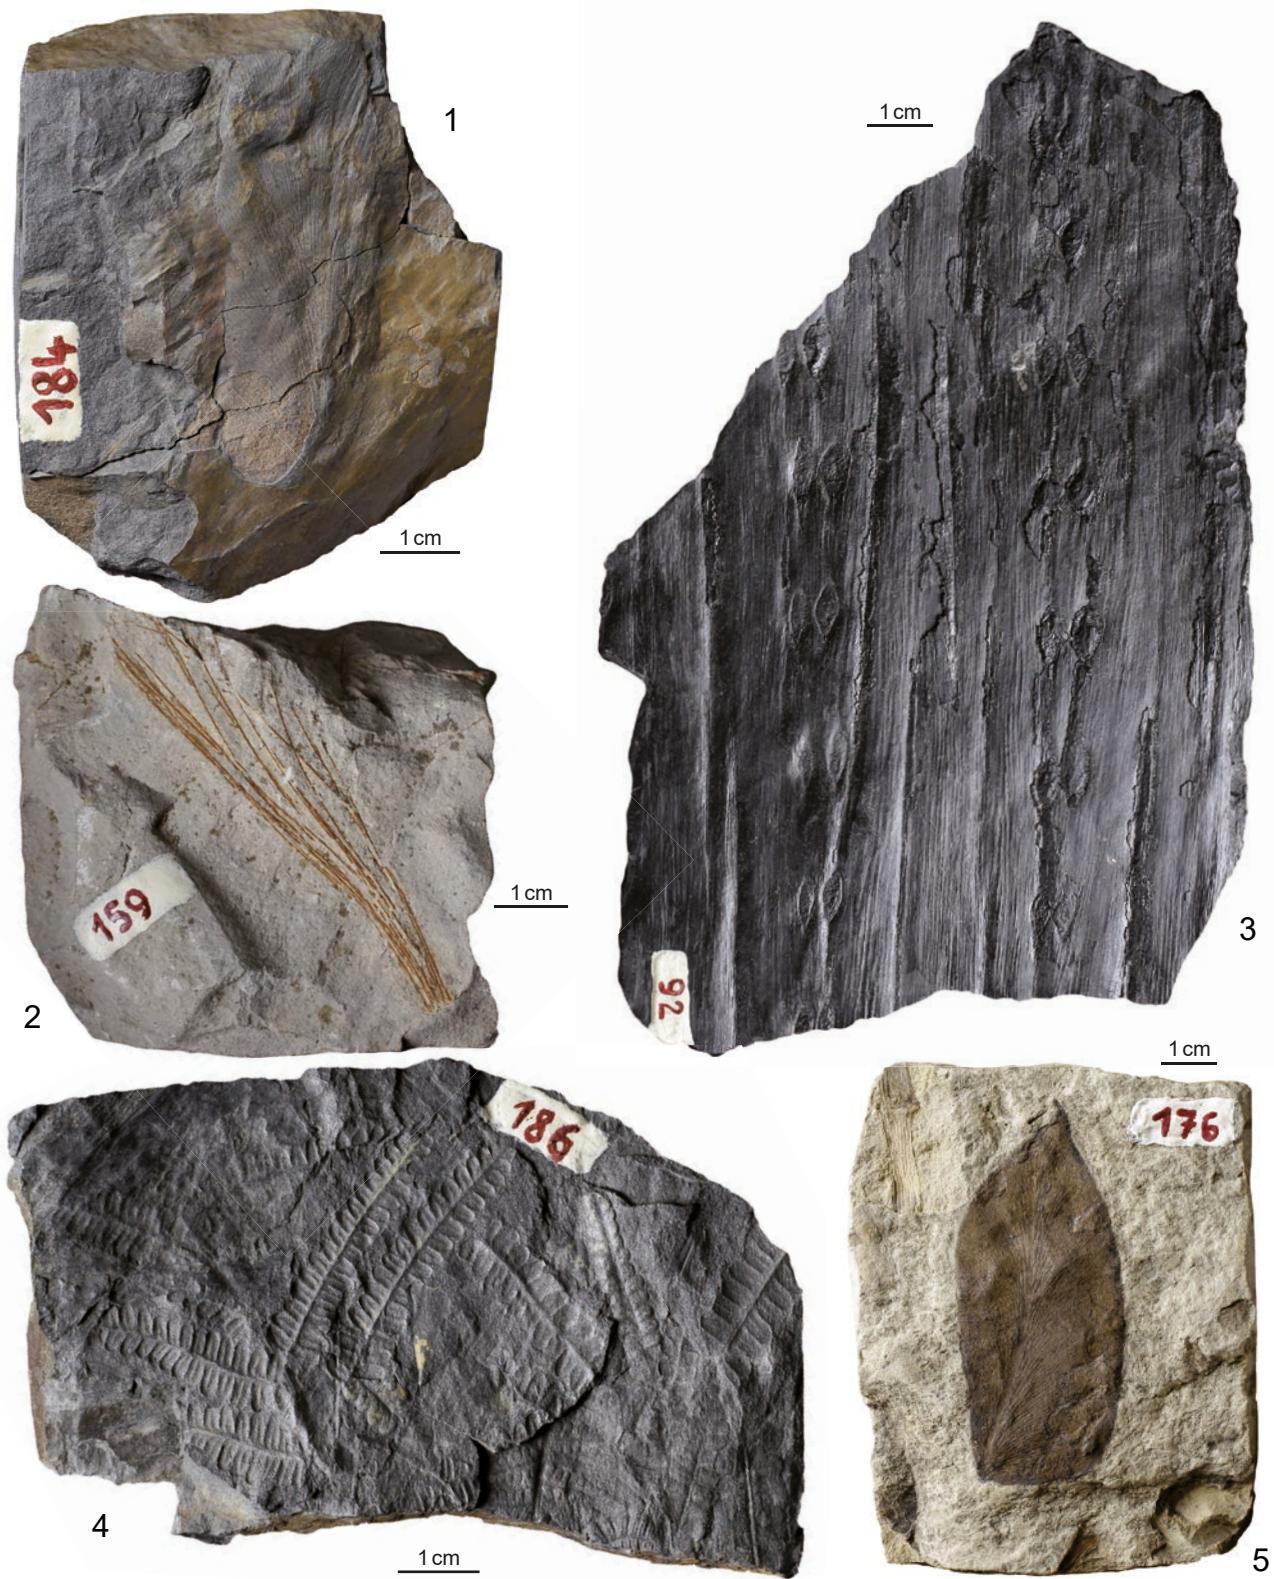

Fig. 1 - *Cyclopteris alpina* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 135, pl. 39, fig. 3 (NM-E 158);
 Fig. 2 - *Chondrites acicularis* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 104, pl. 27, fig. 4 (NM-E 32);
 Fig. 3 - *Syringodendron alternans* STERNEB. 1825, holotype, vol. I, 4, p. 45, tent. p. 24, pl. 58, fig. 2 (NM-E 85);
 Fig. 4 - *Pecopteris alpina* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 147, pl. 39, fig. 5 (NM-E 159);
 Fig. 5 - *Sagenopteris acuminata* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 165, pl. 35, fig. 3 (NM-E 153).

PLATE 2

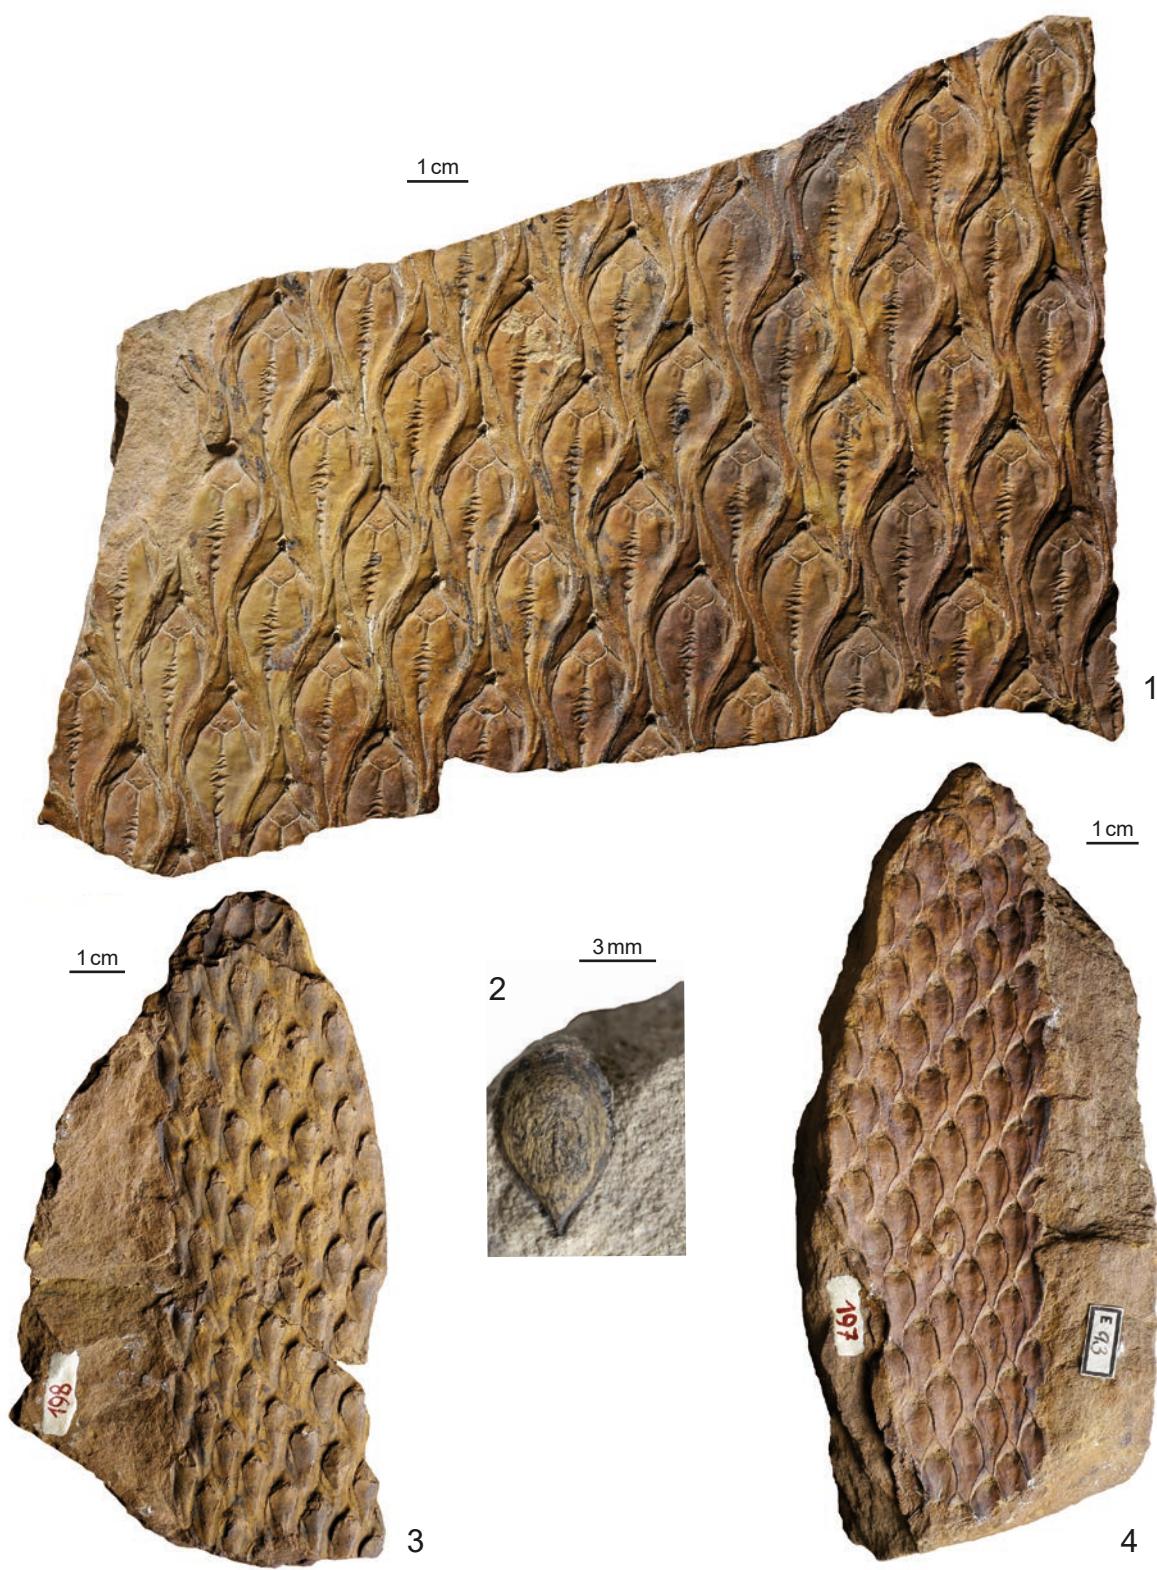

Fig. 1 - *Lepidodendron aculeatum* STERNB. 1820, holotype, vol. I, p. 20, tent. p. 23, pl. 6, fig. 2 (NM-E 4671);
Fig. 2 - *Carpolithes acuminatus* STERNB. 1825, holotype, vol. I, 4, tent. p. 40, Sternb. 1820, vol. I, 1, pl. 7, fig. 4 (NM-E 1198);
Fig. 3 - *Bergeria acuta* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 184, pl. 48, fig. 1a (NM-E 93);
Fig. 4 - *Bergeria acuta* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 184, pl. 48, fig. 1b (NM-E 1835).

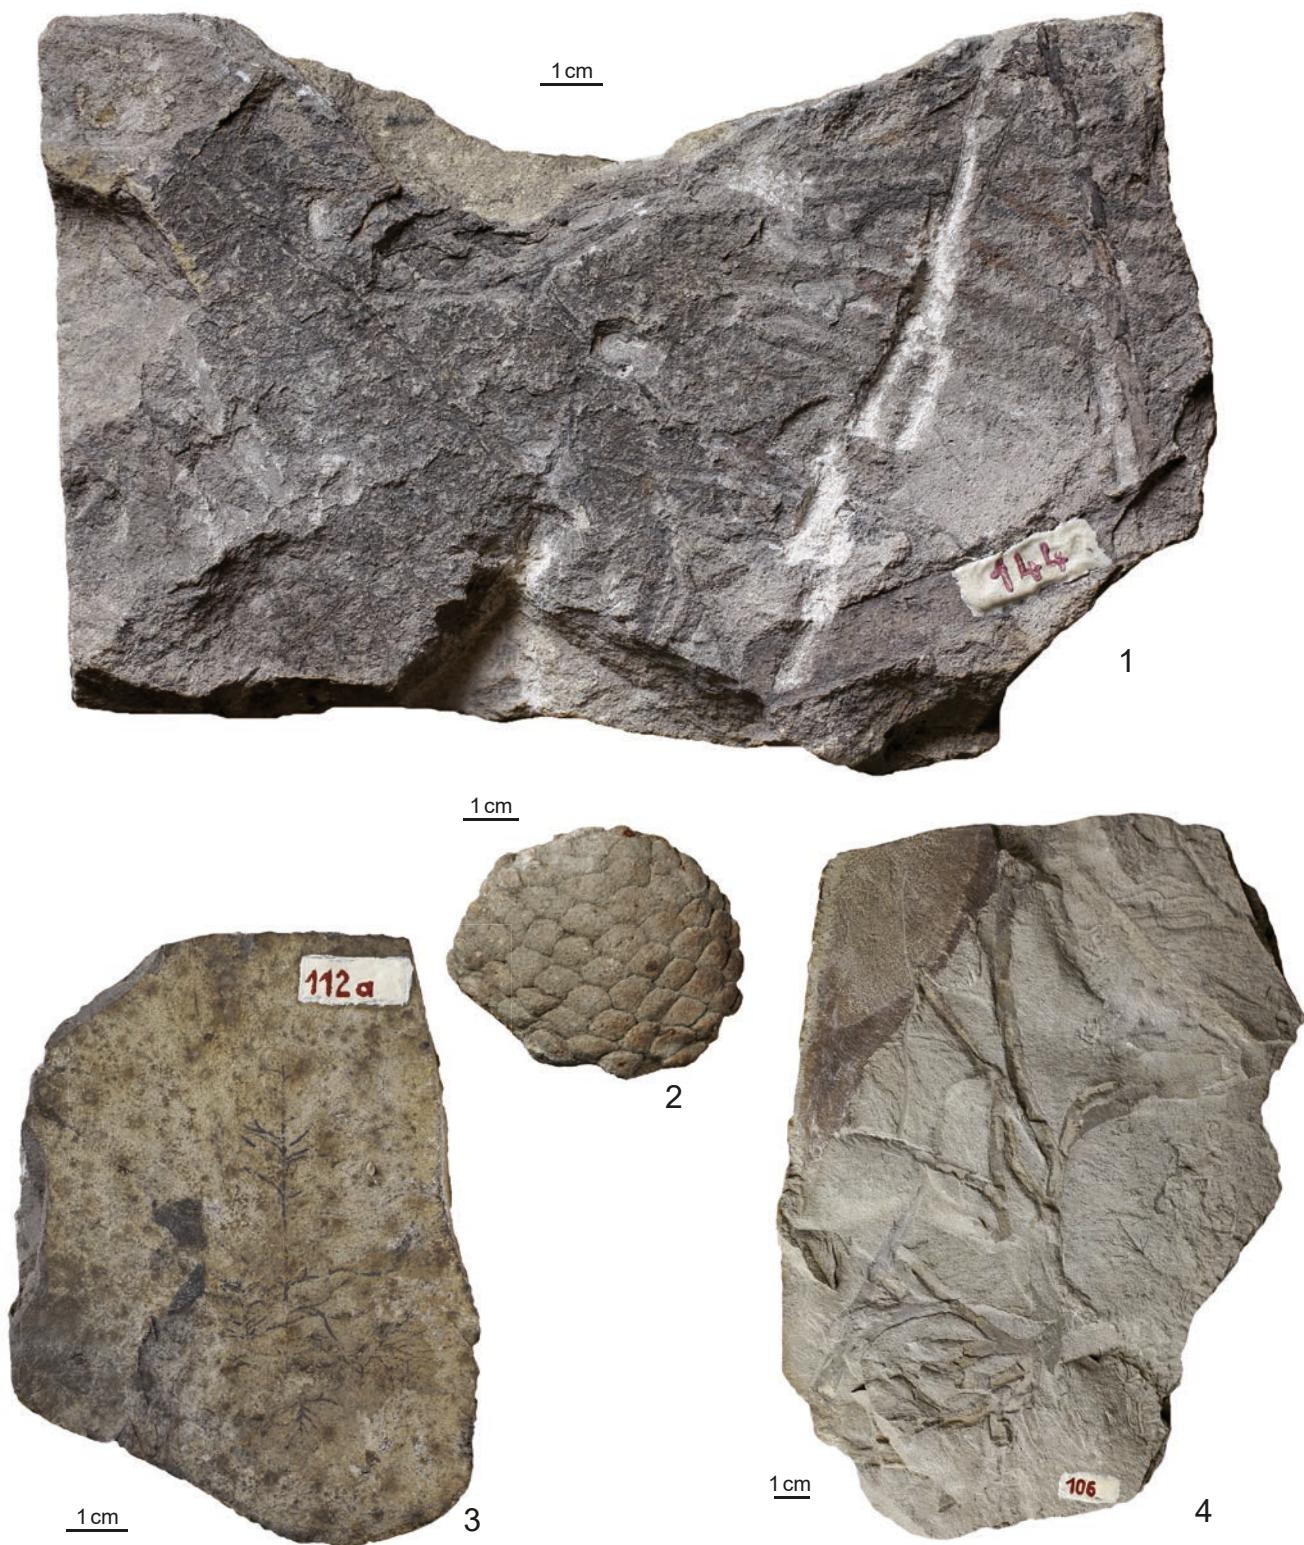

Fig. 1 - *Sphenopteris acutiloba* STERNB. 1833, holotype, vol. II, 5/6, p. 60, pl. 20, fig. 6 (NM-E 963);

Fig. 2 - *Dammarites albens* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 203, pl. 52, figs 11, 12 (NM-F 82);

Fig. 3 - *Chondrites aequalis* (BRONGN.) STERNB. var. *simplex* STERNB. 1833, holotype, vol. II, 5/6, p. 26, pl. 9, fig. 1 (NM-E 17a);

Fig. 4 - *Sphaerococcites affinis* STERNB. 1833, holotype, vol. II, 5/6, p. 28, pl. 7, fig. 1 (NM-E 11).

PLATE 4

Fig. 1 - *Neuropterus alpina* STERNB. 1833, syntype, vol. II, 5/6, p. 76, pl. 22, fig. 2 (NM-E 149);
 Fig. 2 - *Sagenaria affinis* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 180, pl. 68, fig. 9 (NM-K 370);
 Fig. 3 - *Bergeria angulata* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 184, pl. 68, fig. 17 (NM-E 105);
 Fig. 4 - *Strephopteris ambigua* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 120, pl. 50, fig. 2a,b (NM-E 162a);
 Fig. 5 - *Phyllites ambiguus* STERNB. 1825, holotype, vol. I, 4, p. 39, pl. 42, fig. 1 (NM-K 328).

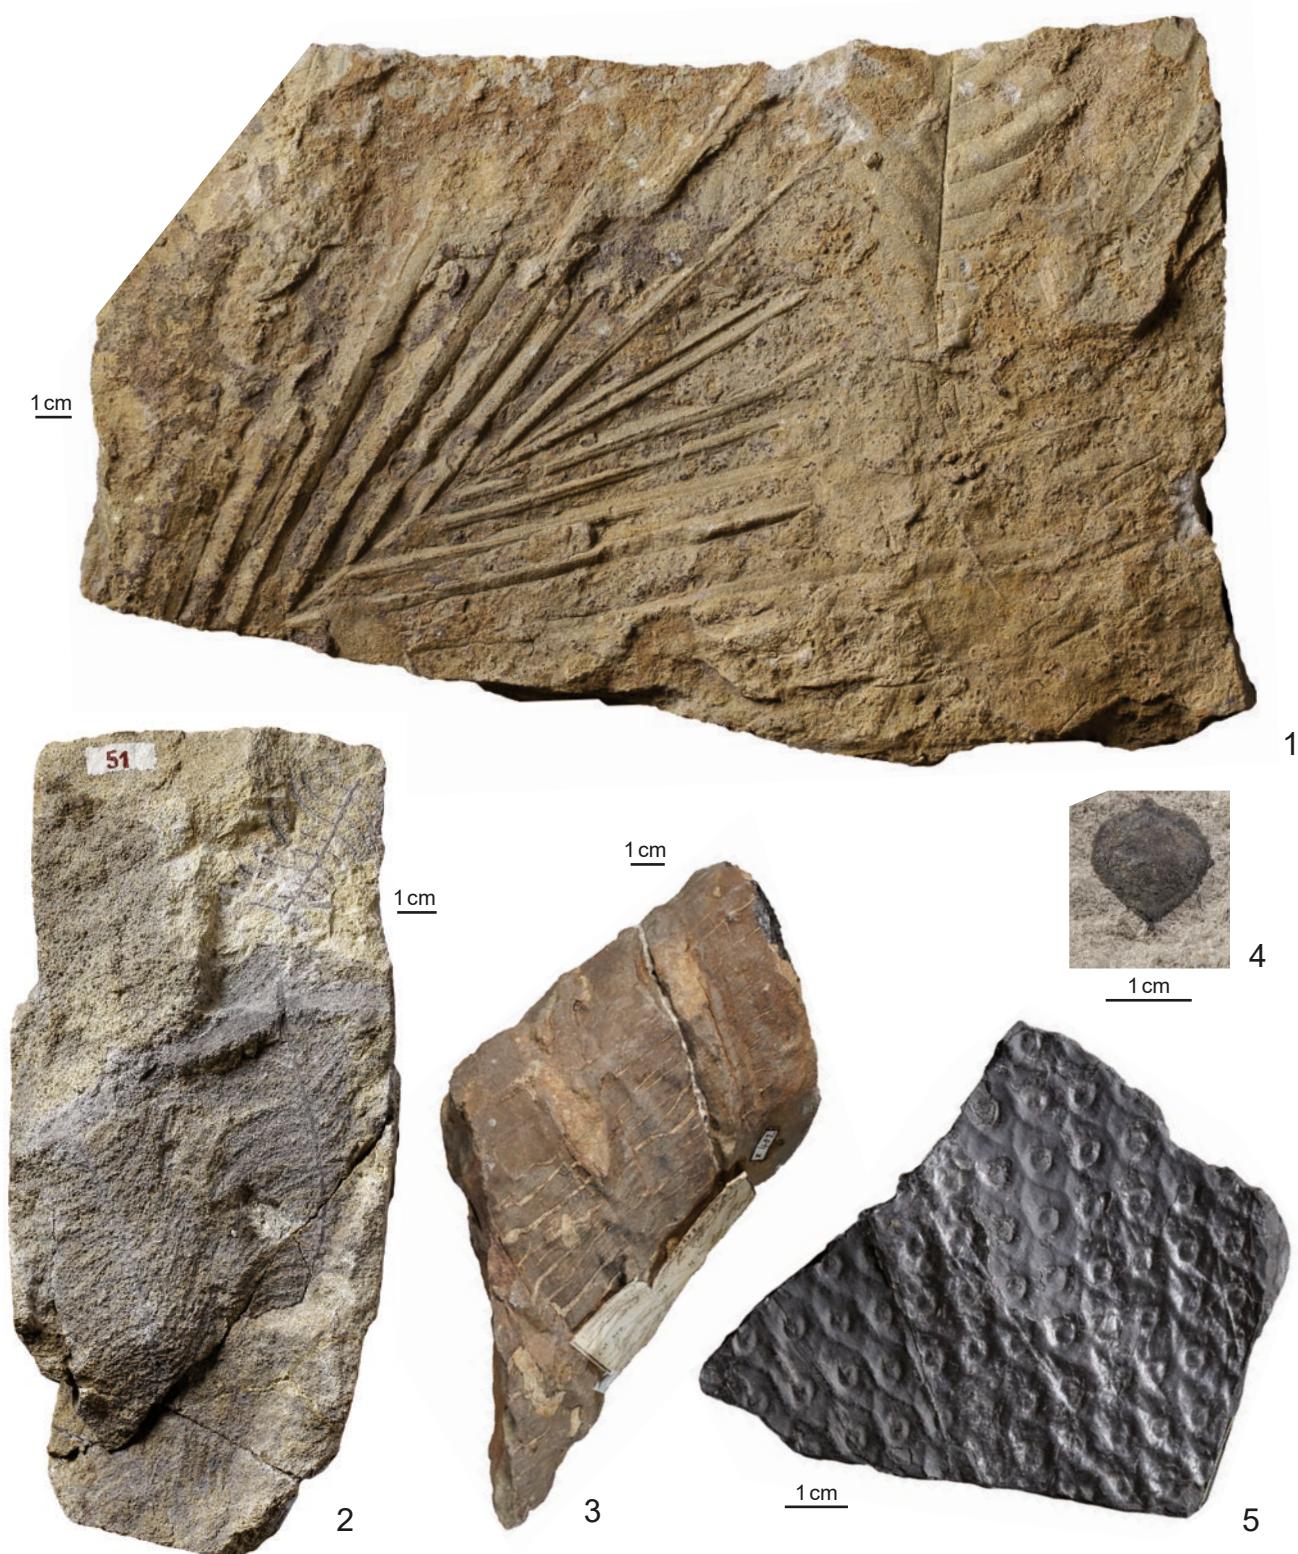

Fig. 1 - *Cycadites angustifolius* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 195, pl. 44 (NM-G 6484);
 Fig. 2 - *Pecopteris angustissima* STERNB. 1825, holotype, vol. I, 4, tent. p. 18, Sternb. 1821 vol. I, 1, pl. 23, fig. 1a,b (NM-E 123);

Lepidodendron laricinum STERNB. 1820, lectotype, vol. I, 1, p. 22, tent. p. 23, pl. 11, fig. 2 (NM-E 4747).

PLATE 32

Lepidodendron lycopodioides STERNB. 1821, syntype, vol. I, 2, p. 26, tent. p. 31, pl. 16, fig. 2 (NM-E 4743).

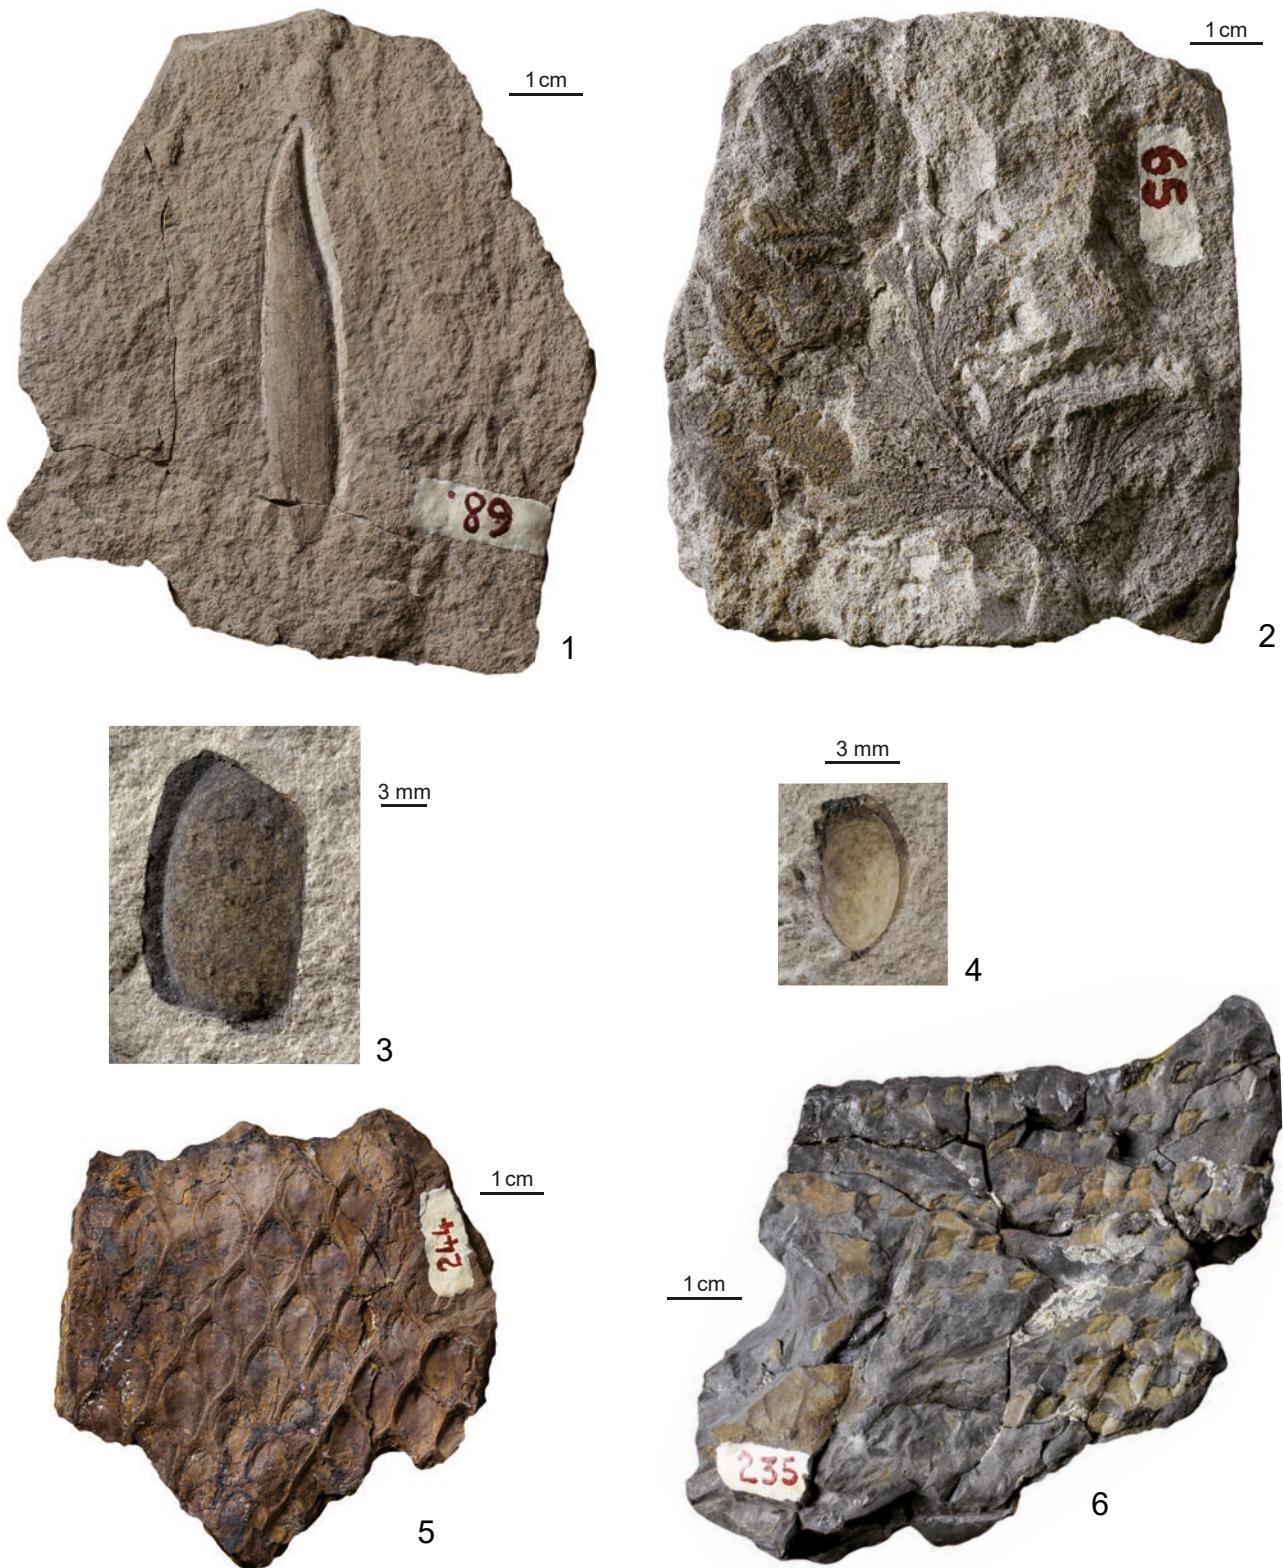

Fig. 1 - *Phyllites hieraciformis* STERNB. 1825, syntype, vol. I, 4, p. 40, Index iconum, pl. 44, fig. 3 (NM-E 171);
 Fig. 2 - *Sphenopteris linearis* STERNB. 1825, holotype, vol. I, 4, p. 40, tent. p. 15, pl. 42, fig. 4 (NM-E 132);
 Fig. 3 - *Carpolithes incertus* STERNB. 1825, holotype, vol. I, 4, tent. p. 41, Sternberg 1820, vol. I, 1, pl. 7, fig. 17 (NM-E 1209);
 Fig. 4 - *Carpolithes minimus* STERNB. 1825, holotype, vol. I, 4, tent. p. 41, Sternberg 1820, vol. I, 1, pl. 7, fig. 3 (NM-E 1196);
 Fig. 5 - *Bergeria marginata* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 184, pl. 68, fig. 16 (NM-E 104);
 Fig. 6 - *Lepidodendron mannebachense* STERNB. 1838, holotype, vol. II, 7/8, p. 177, pl. 68, fig. 2 (NM-E 97).

PLATE 34

Megaphytum majus C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 178, pl. 46, fig. 1 (NM-K 336).

Fig. 1 - *Brukmania longifolia* STERNB. 1825, holotype, vol. I, 4, p. 45, tent. p. 29, pl. 58, fig. 1 (NM-E 51);
 Fig. 2a - *Equisetites mirabilis* STERNB. 1833, holotype, vol. II, 5/6, p. 45, pl. 1, fig. 1a (NM-E 52a);
 Fig. 2b - *Equisetites mirabilis* STERNB. 1833, holotype, vol. II, 5/6, p. 45, pl. 1, fig. 1b (NM-E 52b);
 Fig. 3 - *Carpolithes morschellaeformis* STERNB. 1825, holotype, vol. I, 4, tent. p. 41, Sternberg 1820, vol. I, 1, pl. 7, fig. 5 (NM-E 1199);
 Fig. 4 - *Carpolithes minutulus* STERNB. 1825, syntypes, vol. I, 4, p. 44, tent. p. 41, pl. 53, fig. 8 (NM-E 183);
 Fig. 5 - *Sphenopteris meifolia* STERNB. 1833, holotype, vol. II, 5/6, p. 56, pl. 20, fig. 5a,b (NM-E 145).

PLATE 36

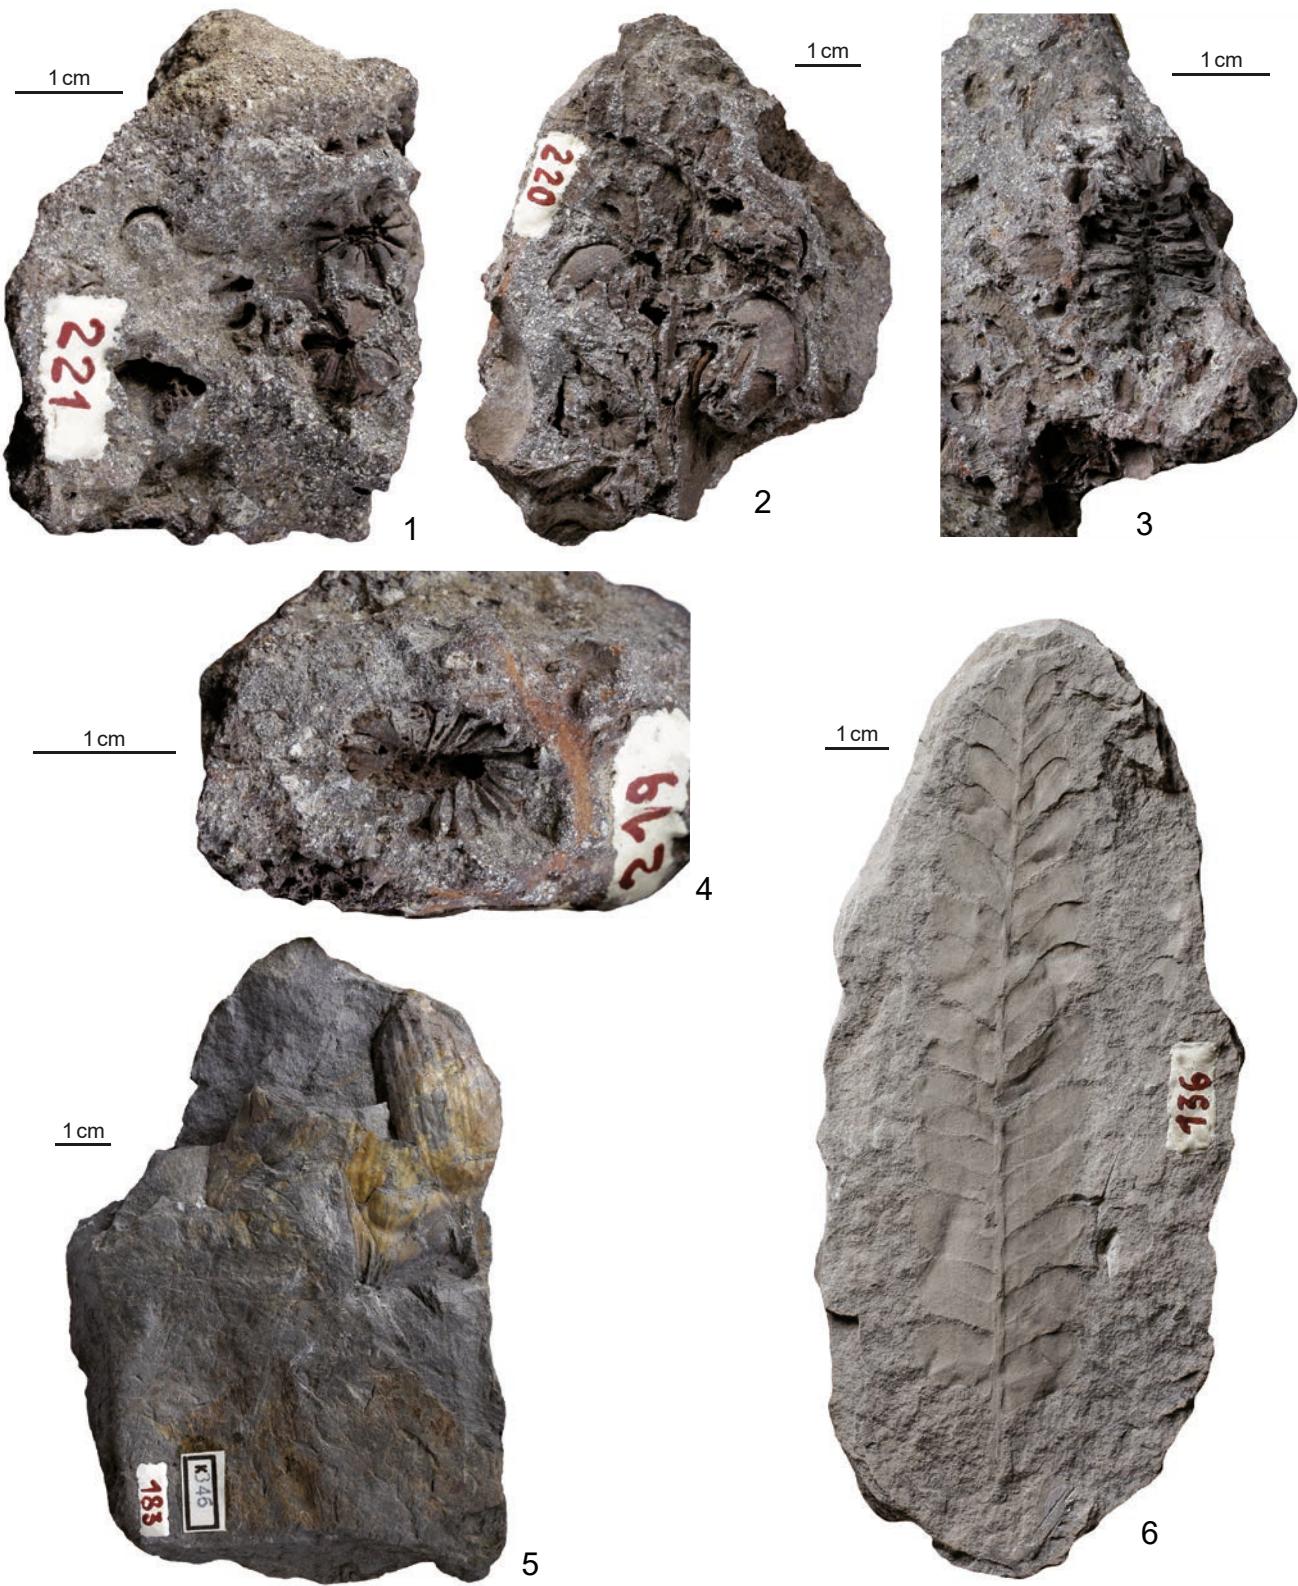

Fig. 1 - *Steinhaueria minuta* C.PRESL in Sternberg 1838, syntype, vol. II, 7/8, p. 202, pl. 57, figs 13–15 (NM-E 192);
 Fig. 2 - *Steinhaueria minuta* C.PRESL in Sternberg 1838, syntype, vol. II, 7/8, p. 202, pl. 57, figs 11–12 (NM-E 191);
 Fig. 3 - *Steinhaueria minuta* C.PRESL in Sternberg 1838, syntype, vol. II, 7/8, p. 202, pl. 57, figs 7, 8 (NM-E 187);
 Fig. 4 - *Steinhaueria minuta* C.PRESL in Sternberg 1838, syntype, vol. II, 7/8, p. 202, pl. 57, figs 9–10 (NM-E 190);
 Fig. 5 - *Carpolithes multistriatus* C.PRESL in Sternberg 1838, syntype, vol. II, 7/8, p. 208, pl. 39, fig. 2 (NM-K 346);
 Fig. 6 - *Neuropteris obovata* STERNB. 1825, holotype, vol. I, 4, tent. p. 16, Sternberg 1833, vol. II, 5/6, p. 74, pl. 19, fig. 2 (NM-E 141).

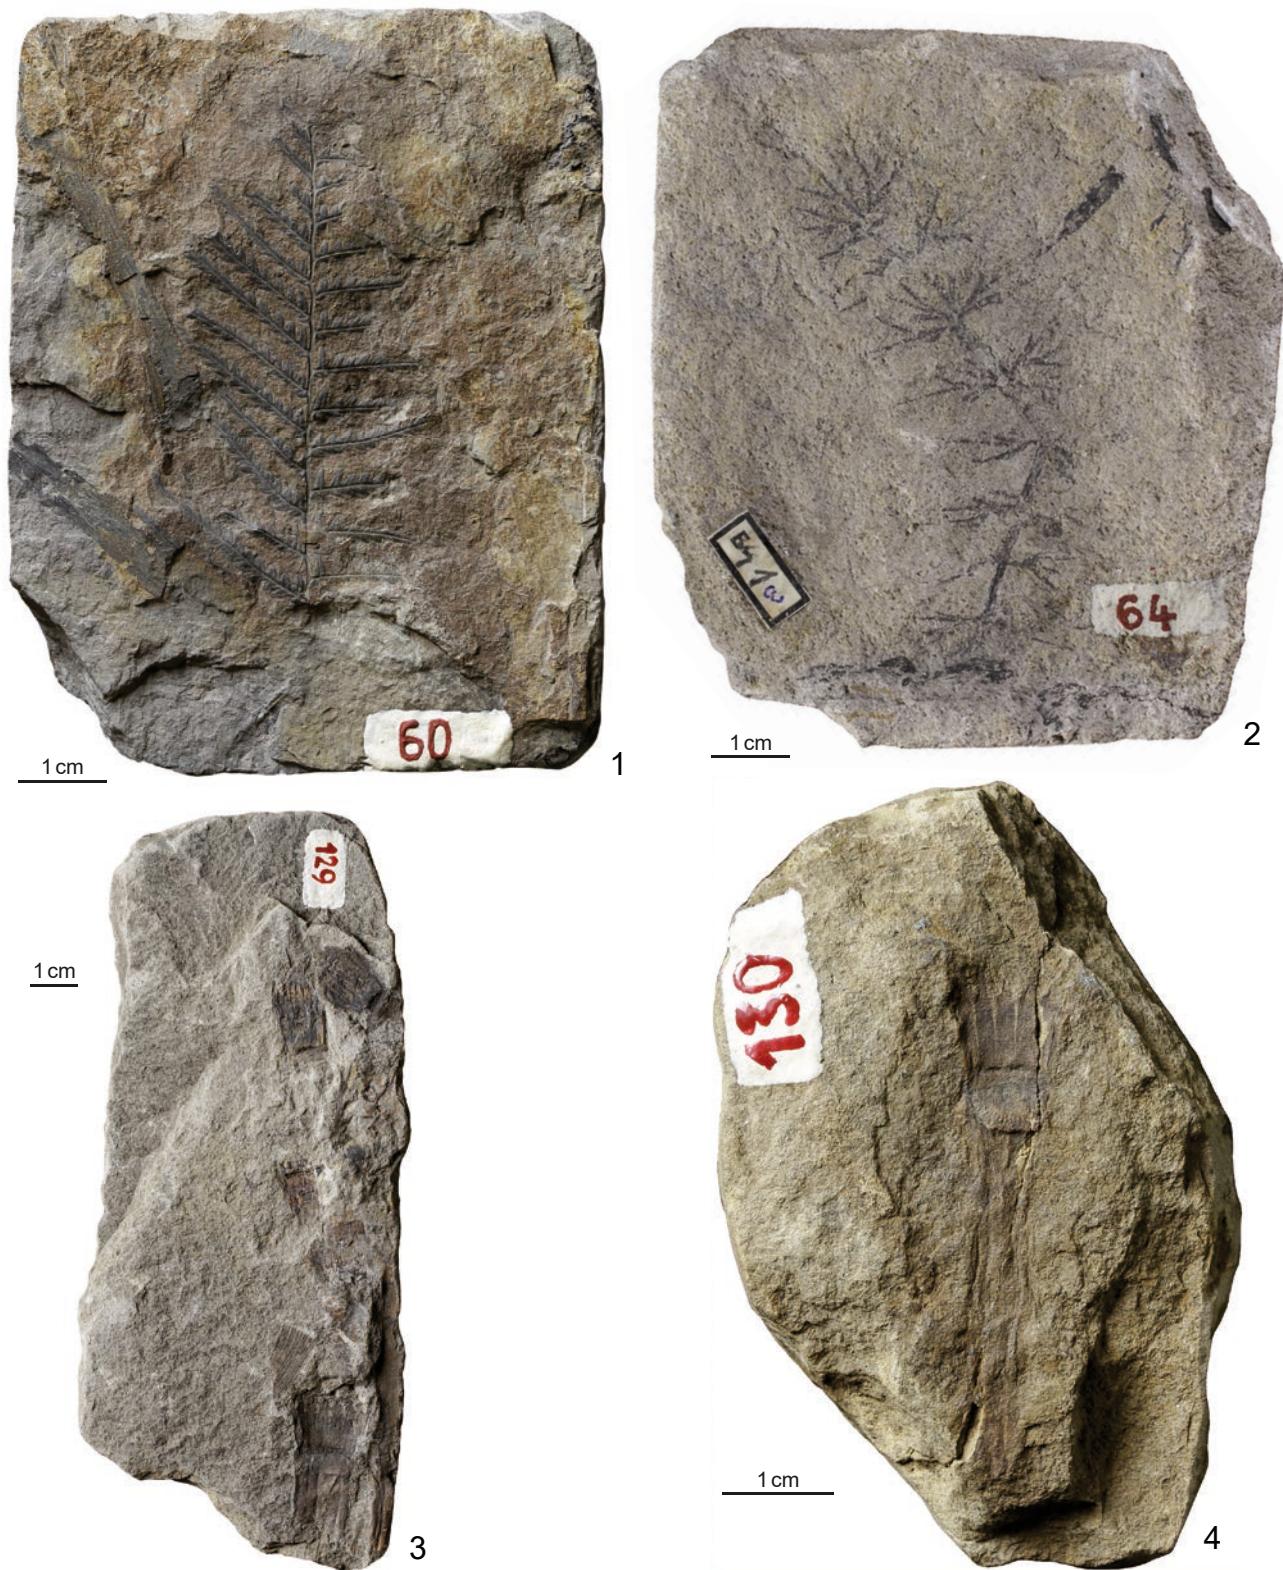

Fig. 1 - *Pecopteris mucronata* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 159, Sternberg 1821, vol. I, 2, p. 30, pl. 26, fig. 6 (NM-E 131);

Fig. 2 - *Myriophyllites microphyllus* STERNB. 1823, nom. inval., *Bechera ceratophylloides* STERNB. 1825, holotype, vol. I, 3, p. 37, tent. p. 39, pl. 35, fig. 3 (NM-E 41a);

Fig. 3 - *Equisetites muensteri* STERNB. 1833, syntype, vol. II, 5/6, p. 43, pl. 16, fig. 3 (NM-E 55);

Fig. 4 - *Equisetites muensteri* STERNB. 1833, syntype, vol. II, 5/6, p. 43, pl. 16, fig. 4 (NM-E 56).

PLATE 38

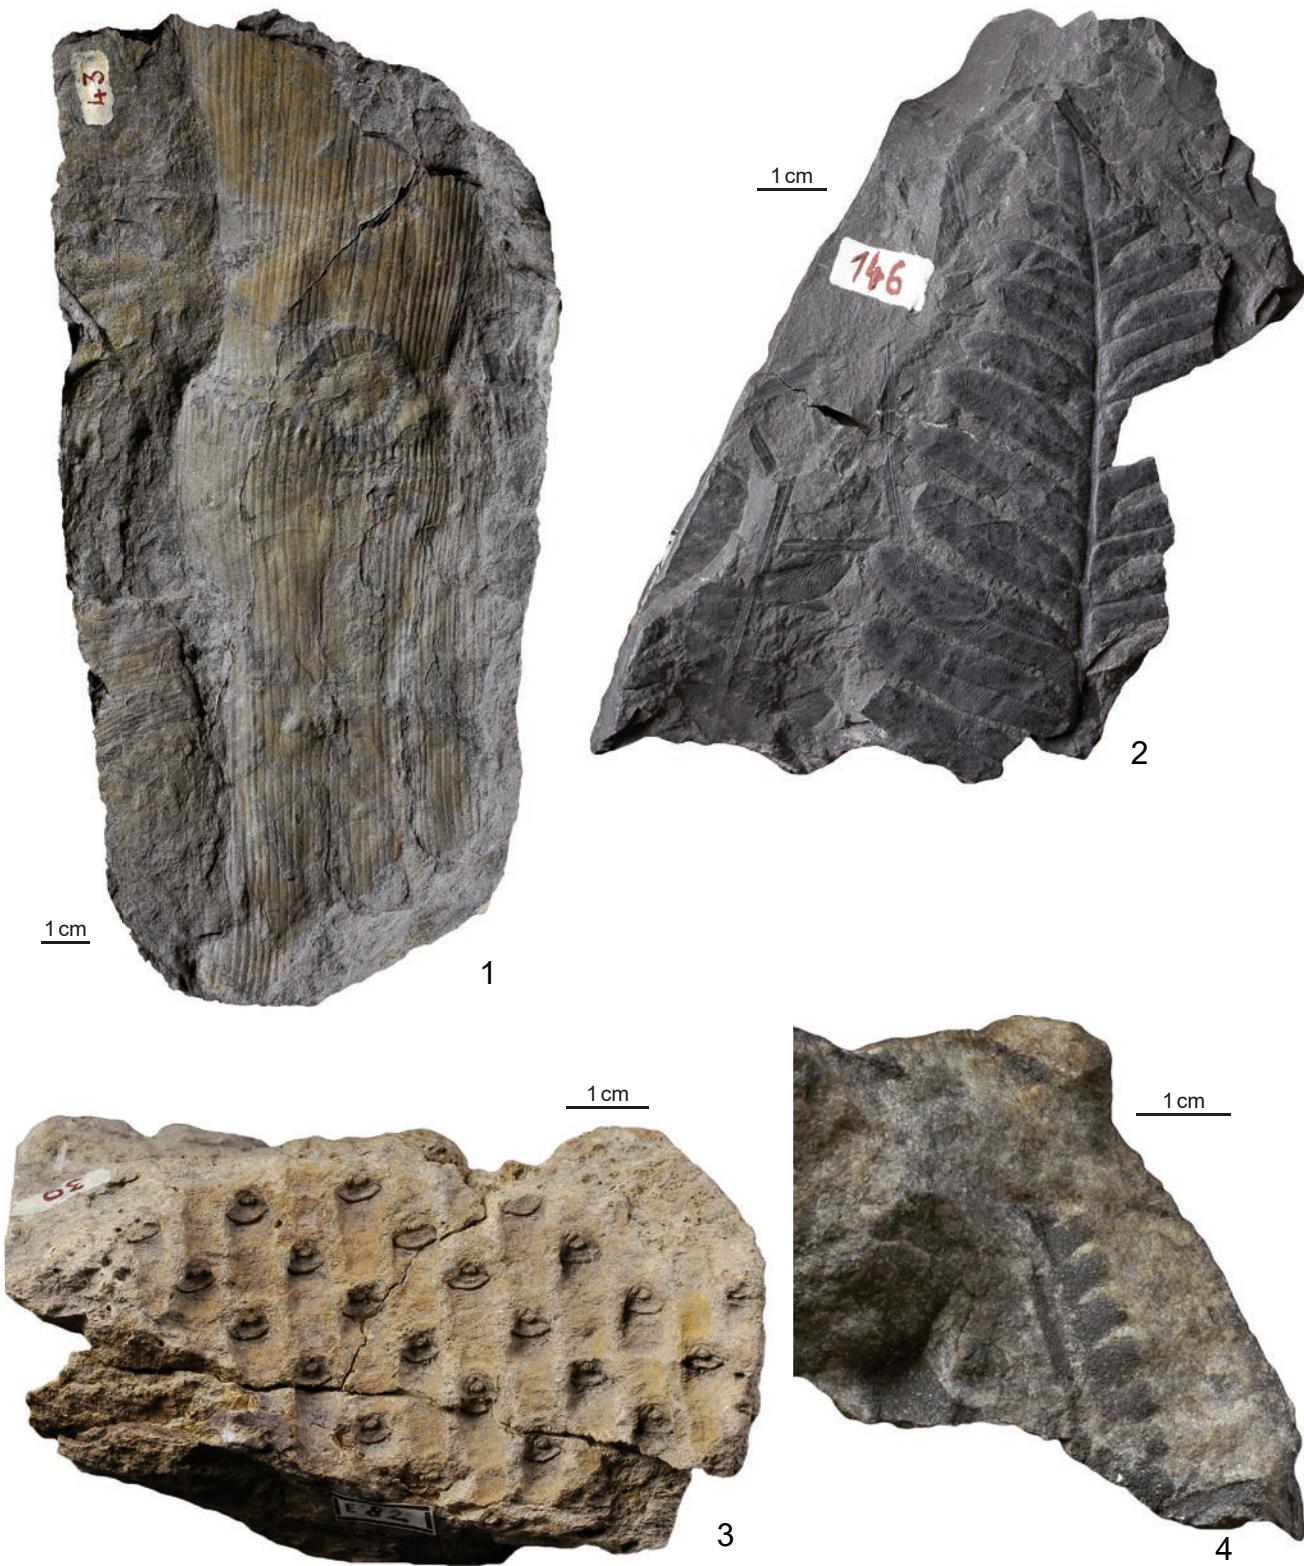

Fig. 1 - *Calamites nodosus* STERNB. 1821, holotype, vol. I, 2, p. 27, tent. p. 32, pl. 17, fig. 2 (NM-E 2357);

Fig. 2 - *Neuropterus oblongata* STERNB. 1825, lectotype, vol. I, 4, tent. p. 17, Sternberg 1833, vol. II, 5/6, p. 75, pl. 22, fig. 1a (NM-E 146);

Fig. 3 - *Rhytidolepis ocellata* STERNB. 1821, syntype, vol. I, 2, p. 25, tent. p. 32, pl. 15, fig. 2 (NM-E 82);

Fig. 4 - *Aspleniopterus nilsonii* STERNB. 1825, syntype, vol. I, 4, p. 40, tent. p. 22, pl. 43, fig. 4 (NM-E 164).

Fig. 1 - *Cunninghamites oxycedrus* C.PRESL in Sternberg 1838, syntype, vol. II, p. 203, pl. 49, fig. 1a (NM-F 642);
 Fig. 2 - *Carpolithes punctatissimus* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 108, pl. 58, figs 16, 17 (NM-E 1217);
 Fig. 3 - *Scitaminites musaeformis* STERNB. 1825, holotype, vol. I, 4, tent. p. 36, Sternberg 1820, vol. I, 1, p. 20, pl. 5, fig. 2a,b ≡ *Cro-myodendron radnicense* C.PRESL in Sternberg 1838, nom. illeg., vol. II, 7/8, p. 193 (NM-E 205);
 Fig. 4 - *Lepidodendron obovatum* STERNB. 1820, holotype, vol. I, 1, p. 20, tent. p. 23, pl. 6, fig. 1 (NM-E 4740).

PLATE 40

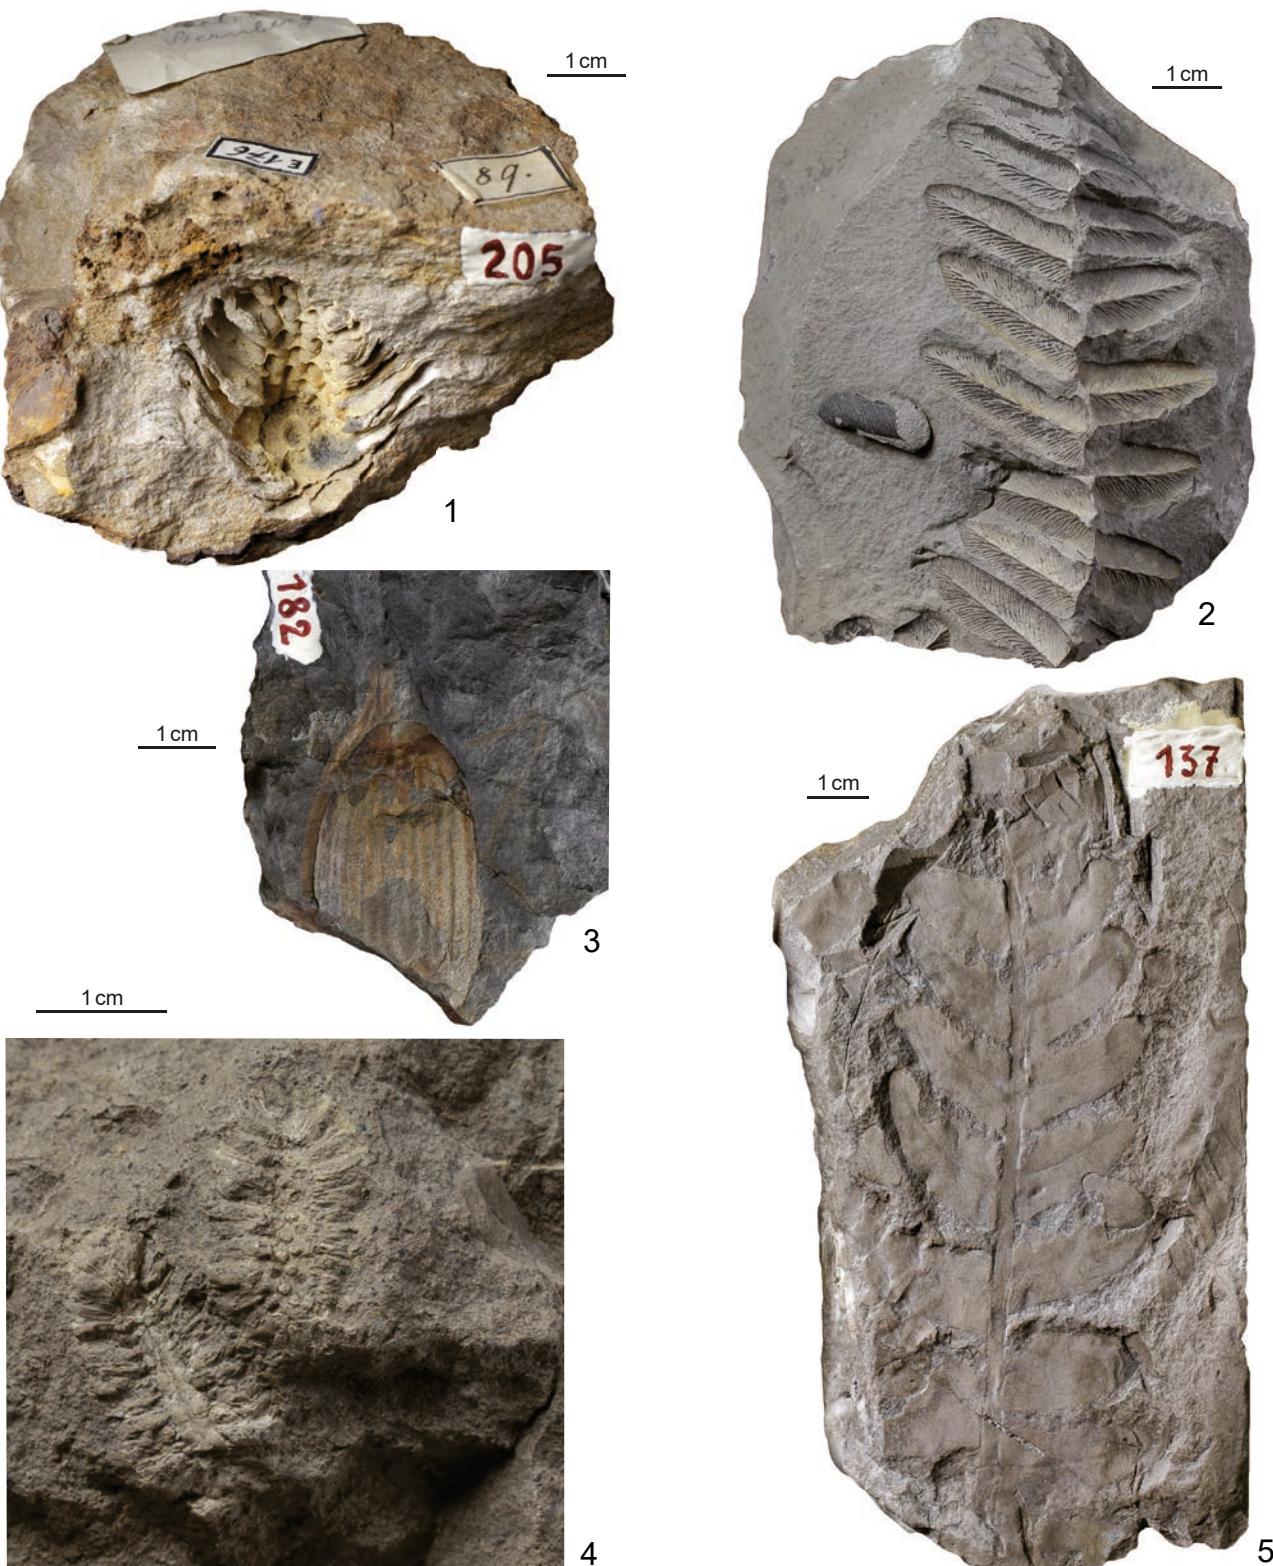

Fig. 1 - *Pinites ovatus* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 202, pl. 52, fig. 10 (NM-E 176);
 Fig. 2 - *Neuropteris oblongata* STERNB. 1825, syntype, vol. I, 4, tent. p. 17, Sternberg 1833, vol. II, 5/6, p. 75, pl. 22, fig. 1b (NM-K 367);
 Fig. 3 - *Carpolithes multistriatus* C.PRESL in Sternberg 1838, lectotype, vol. II, 7/8, p. 208, pl. 39, fig. 1 (NM-E 1206);
 Fig. 4 - *Steinhaueria oblonga* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 202, pl. 57, figs 5, 6 (NM-G 2118);
 Fig. 5 - *Neuropteris plicata* STERNB. 1825, syntype, vol. I, 4, tent. p. 16, Sternberg 1833, vol. II, 5/6, p. 74, pl. 19, fig. 3 (NM-E 142).

Fig. 1 - *Musaeites primaevus* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 191, pl. 39, fig. 6 (NM-E 108);
Fig. 2 - *Neuropteris plicata* STERNB. 1825, syntype, vol. I, 4, tent. p. 16, Sternberg 1833, vol. II, 5/6, p. 74, pl. 19, fig. 1 (NM-E 3077);
Fig. 3 - *Cycadites palmatus* STERNB. 1825, holotype, vol. I, 4, p. 39, tent. p. 33, pl. 40 (NM-E 4750).

PLATE 42

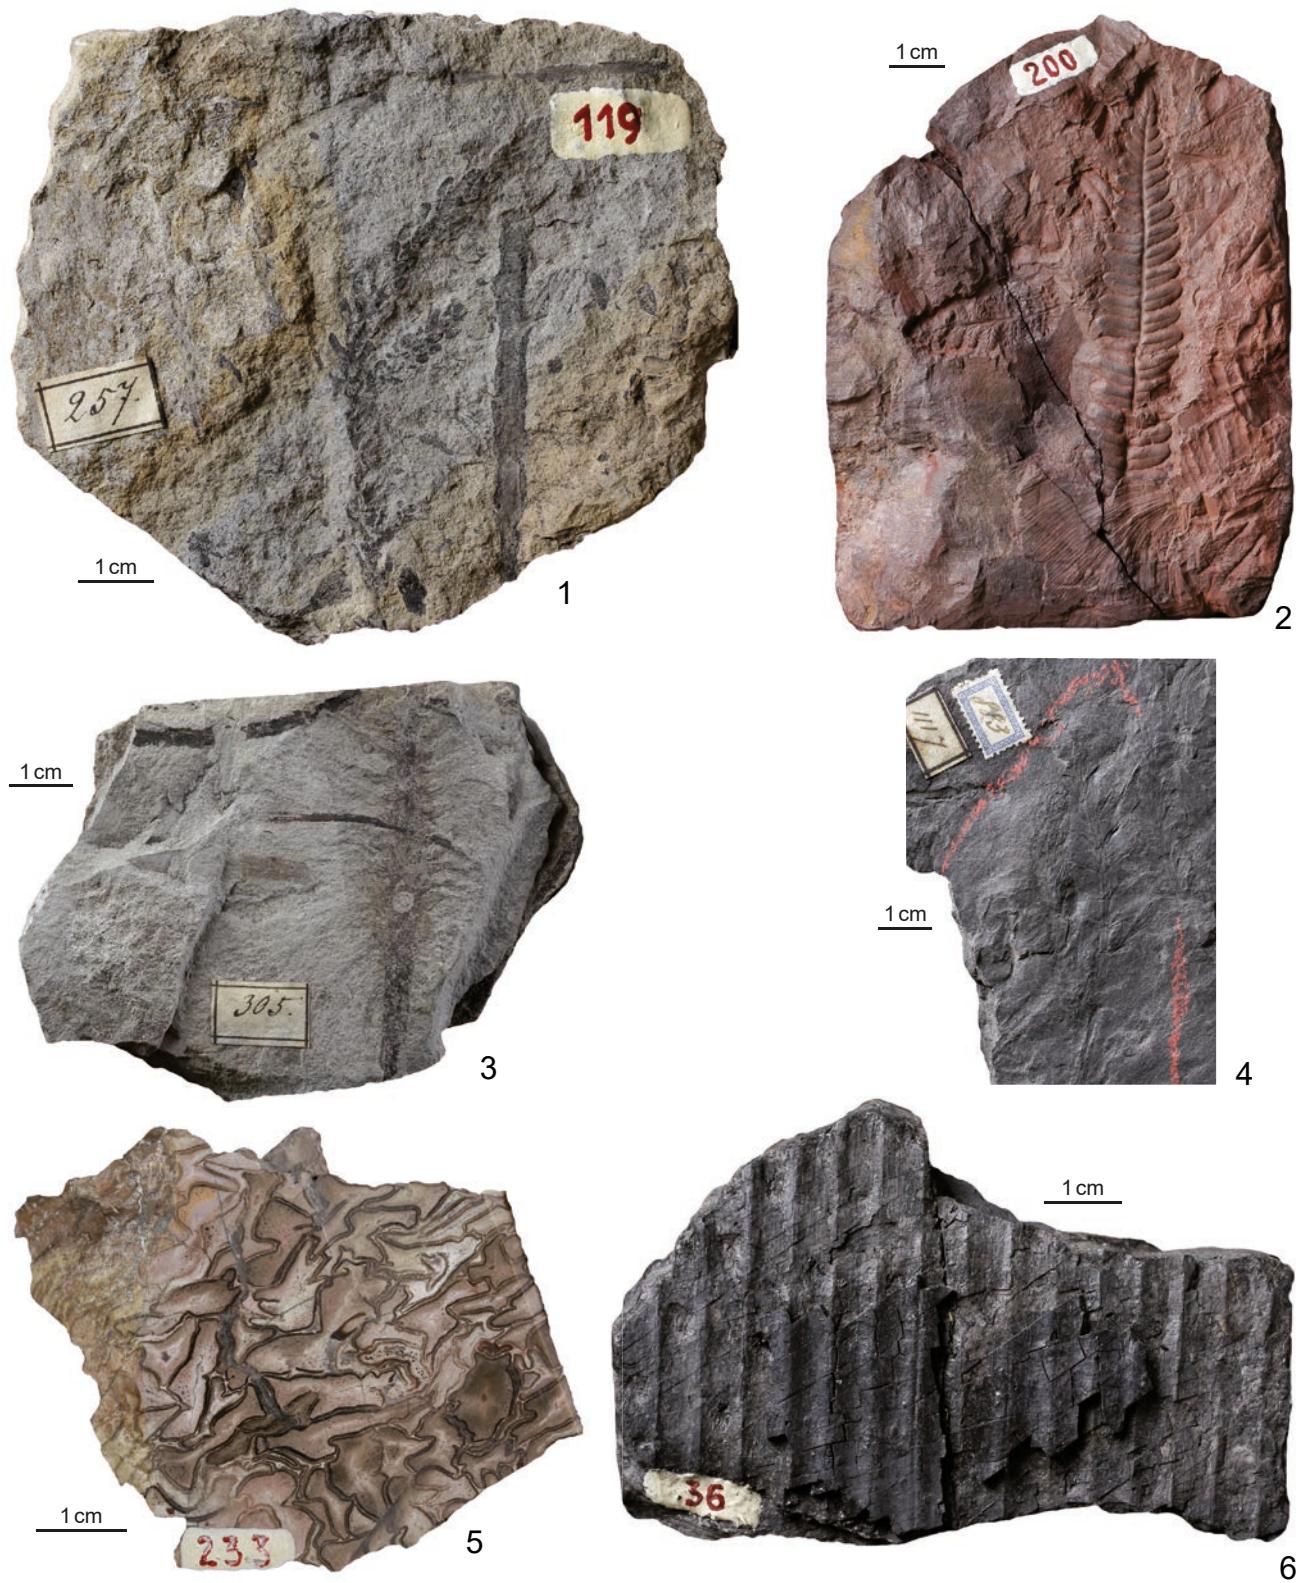

Fig. 1 - *Caulerpites preslianus* STERNB. 1833, holotype, vol. II, 5/6, p. 24, pl. 10, fig. 5 (NM-E 23);
 Fig. 2a - *Goeppertia polystachya* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 121, pl. 50, fig. 1a (NM-E 161a);
 Fig. 2b - *Neuropteris rubescens* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 136, pl. 50, fig. 1b (NM-E 161b);
 Fig. 3 - *Delessertites pinatifidus* STERNB. 1833, holotype, vol. II, 5/6, 33, pl. 10, fig. 4 (NM-K 365);
 Fig. 4 - *Volkmannia polystachya* STERNB. 1825, syntype, vol. I, 4, p. 43, tent. p. 30, pl. 51, fig. 1a (NM-E 45);
 Fig. 5 - *Psaronius parkeriaeformis* CORDA in Sternberg 1838, holotype, vol. II, 7/8, p. 173, pl. 60, fig. 4 (NM-E 4629);
 Fig. 6 - *Syringodendron pes-capreoli* STERNB. 1820, holotype, vol. I, 1, p. 22, tent. p. 24, pl. 13, fig. 2 (NM-E 83).

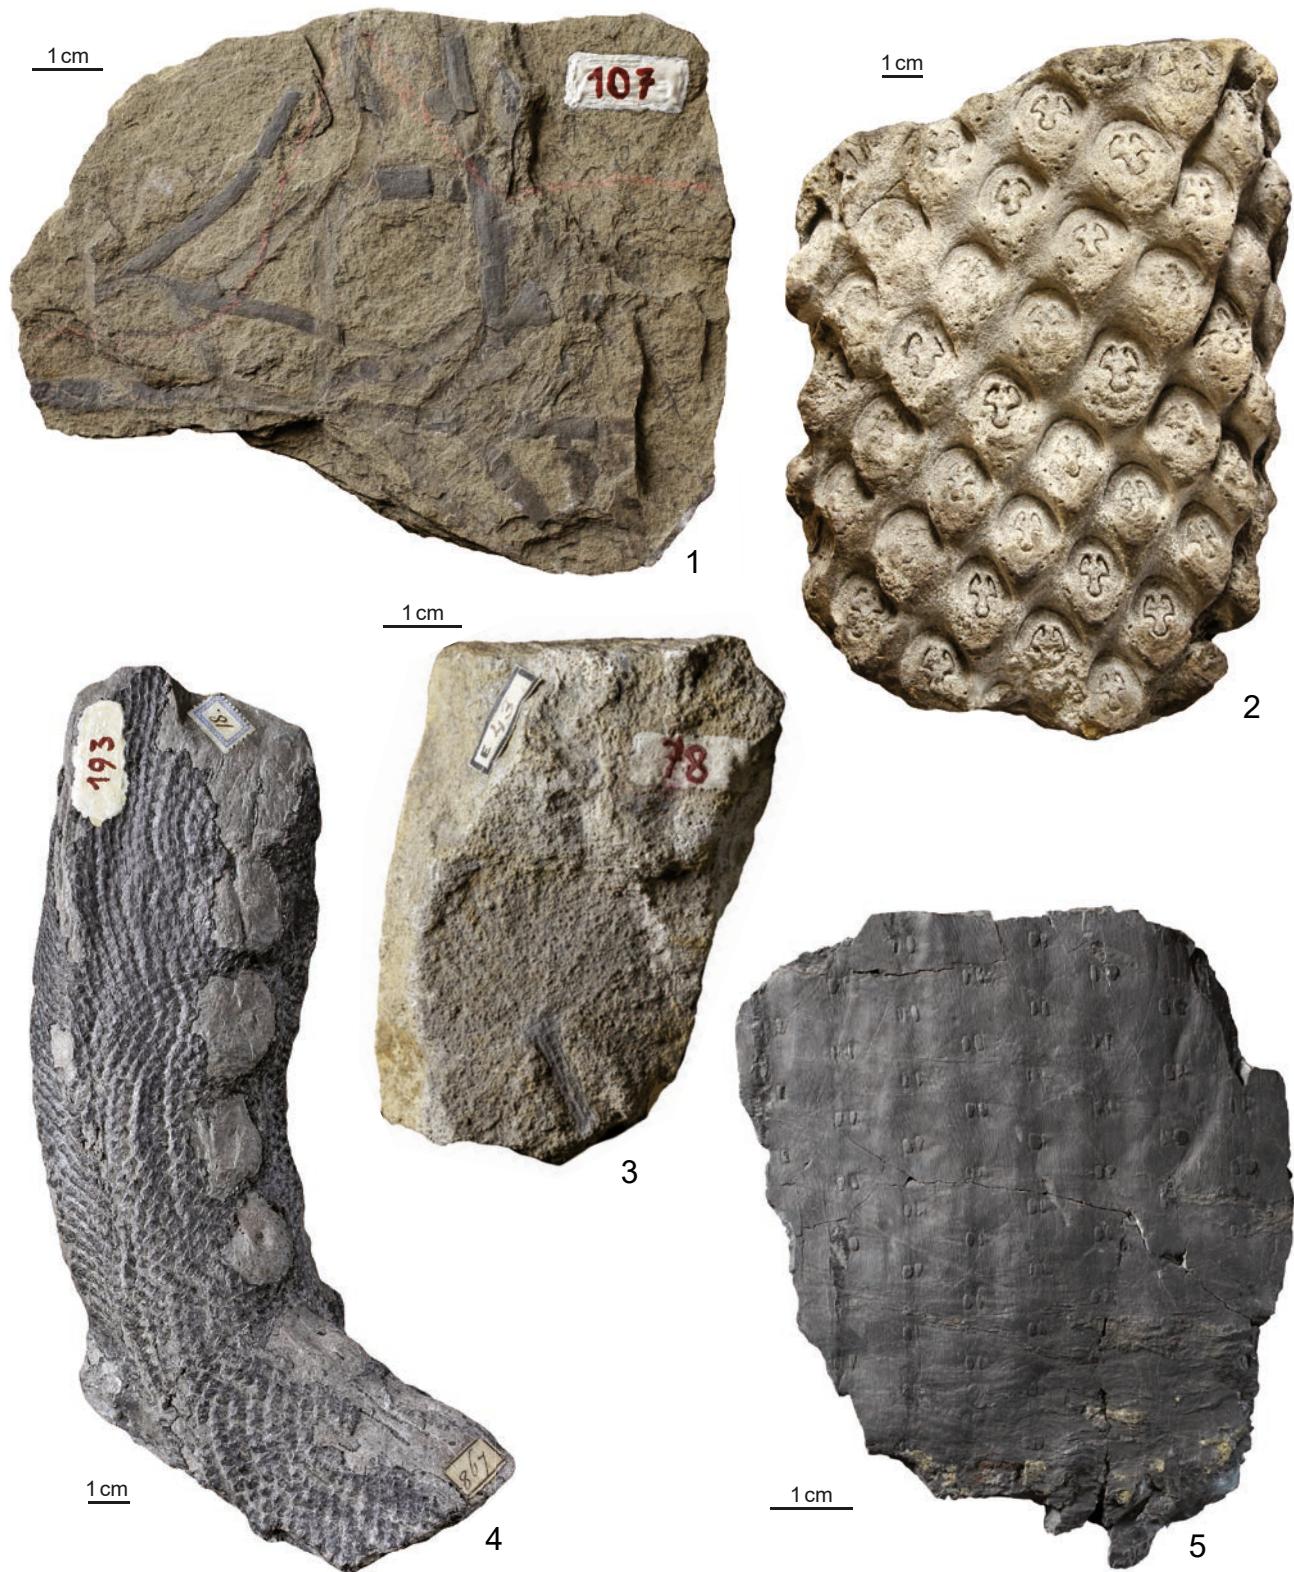

Fig. 1 - *Caulerpites pyramidalis* STERNB. 1833, syntype, vol. II, 5/6, p. 21, pl. 7, fig. 2 (NM-E 12);
 Fig. 2 - *Lepidodendron punctatum* STERNB. 1820, holotype, vol. I, 1, p. 20, tent. p. 23, pl. 8, fig. 2 Aa,b (NM-F 1471);
 Fig. 3 - *Rotularia polyphylla* STERNB. 1825, holotype. vol. I, 4, p. 42, tent. p. 32, pl. 50, fig. 4 (NM-E 43);
 Fig. 4 - *Ulodendron punctatum* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 186, pl. 45, fig. 1a-e (NM-E 91);
 Fig. 5 - *Syringodendron pulchellum* STERNB. 1825, holotype, vol. I, 4, p. 43, tent. p. 24, pl. 52, fig. 2 (NM-K 337).

PLATE 44

Fig. 1 - *Pecopteris radnicensis* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 161, pl. 58, fig. 1 (NM-E 1544);
Fig. 2 - *Equisetites sinsheimicus* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 207, pl. 30, fig. 2 (NM-E 60);
Fig. 3 - *Lepidodendron rimosum* STERNB. 1820, holotype, vol. I, 1, p. 21, tent. p. 23, pl. 10, fig. 1 (NM-E 1836);
Fig. 4 - *Neuropteris remota* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 220, pl. 40, fig. 4 (NM-E 160).

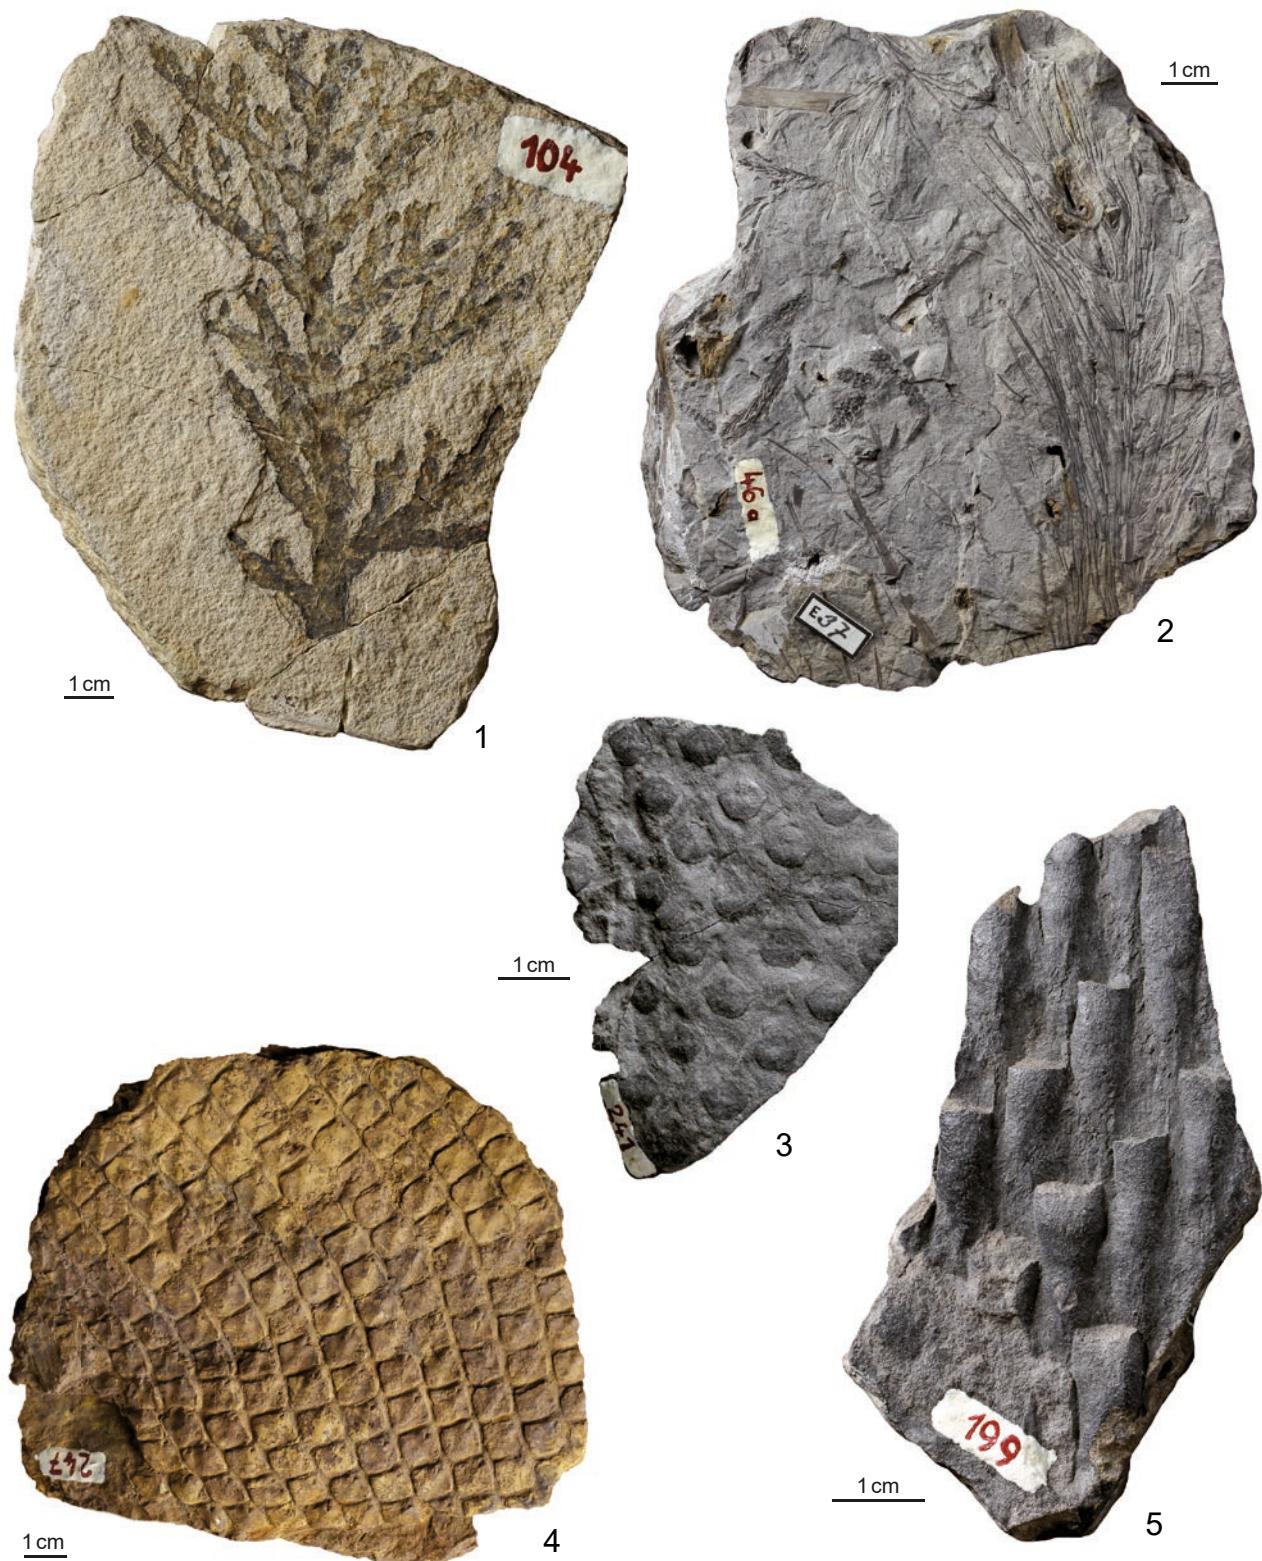

Fig. 1 - *Caulerpites pyramidalis* STERNB. 1833, syntype, vol. II, 5/6, p. 21, pl. 6, fig. 2 (NM-E 9);
 Fig. 2 - *Brukmannia rigida* STERNB. 1825, holotype, vol. I, 4, tent. p. 29, pl. 19, fig. 1 (NM-E 37);
 Fig. 3 - *Aspidiaria schlotheimiana* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 181, pl. 68, fig. 10 (NM-E 1450);
 Fig. 4 - *Bergeria quadrata* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 184, pl. 68, fig. 19 (NM-E 103);
 Fig. 5 - *Pinites pulvinaris* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 201, pl. 49, fig. 7 (NM-E 94).

PLATE 46

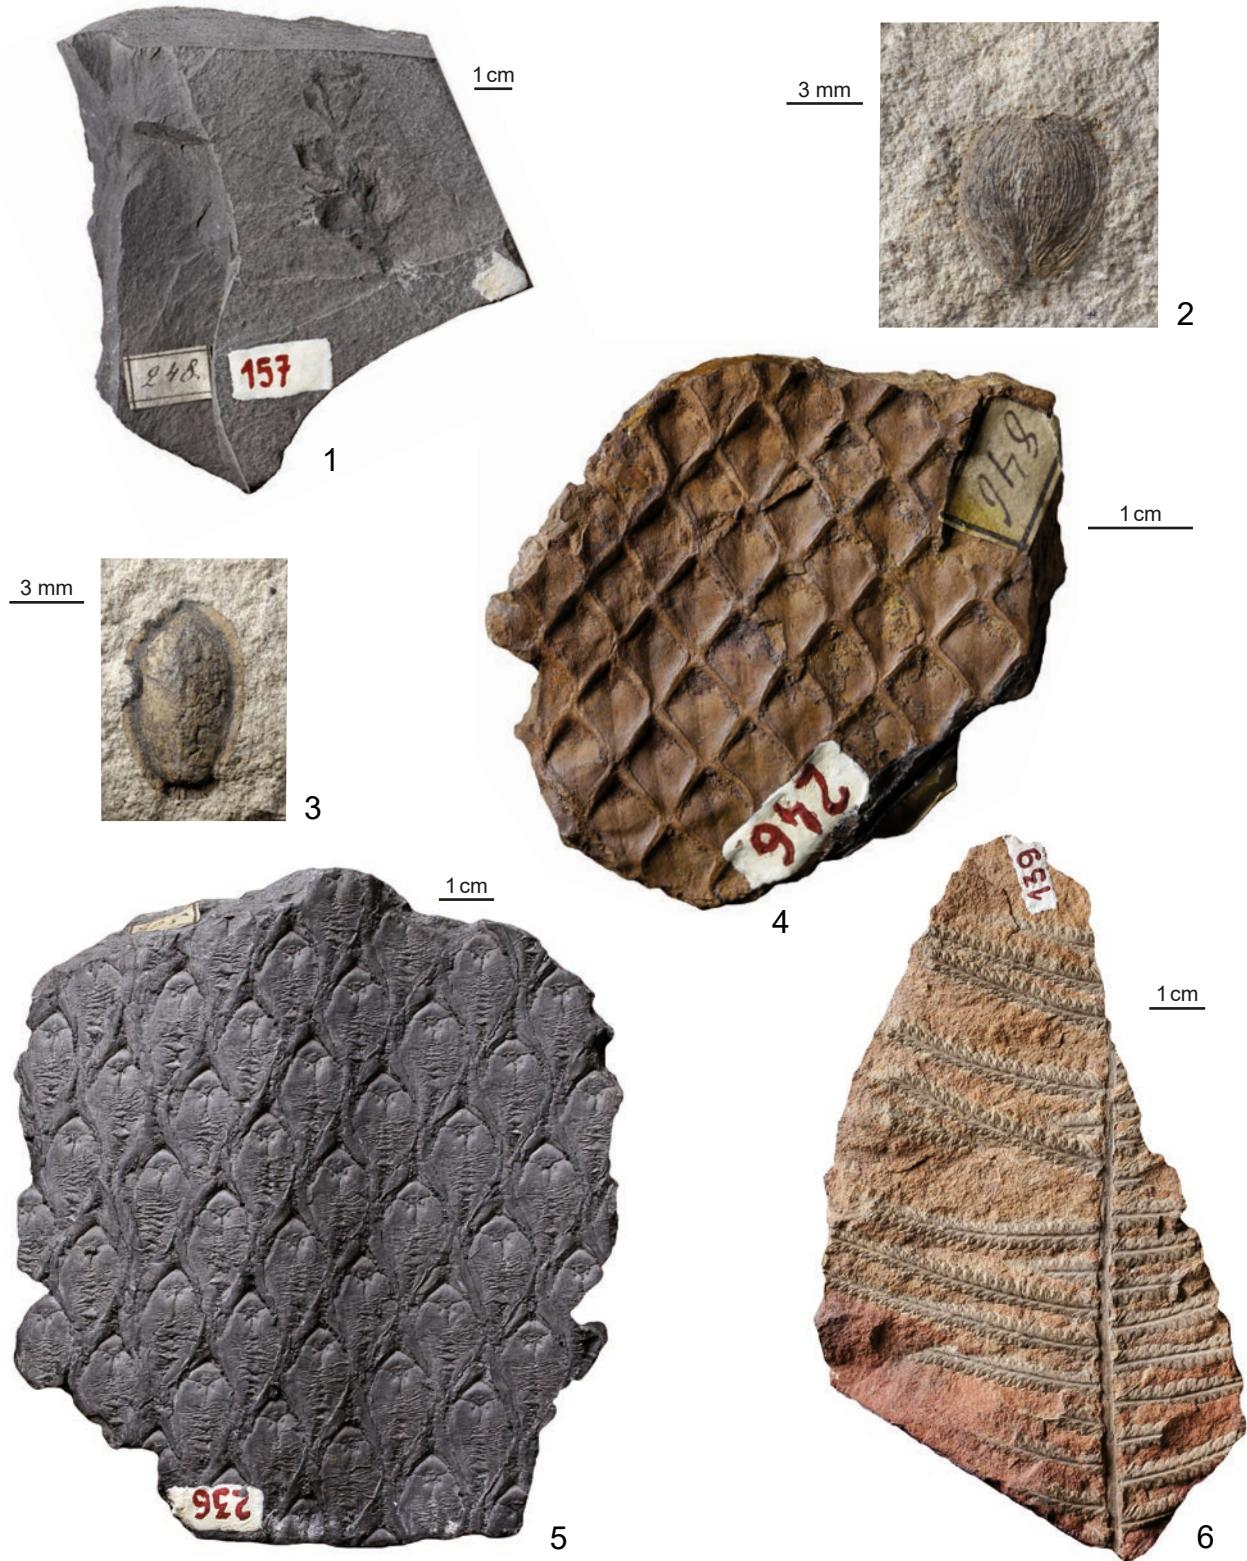

Fig. 1 - *Sargassites rosthornii* STERNB. 1833, holotype, vol. II, 5/6, p. 36, pl. 25, fig. 6 (NM-E 30);
 Fig. 2 - *Carpolithes retusus* STERNB. 1825, holotype, vol. I, 4, tent. p. 41, Sternberg 1820, vol. I, 1, pl. 7, figs 10, 11 (NM-E 1204);
 Fig. 3 - *Carpolithes regularis* STERNB. 1825, holotype, vol. I, 4, tent. p. 41, Sternberg 1820, vol. I, 1, pl. 7, fig. 2 (NM-E 1197);
 Fig. 4 - *Bergeria rhombica* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 184, pl. 68, fig. 18 (NM-E 106);
 Fig. 5 - *Sagenaria rugosa* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 178, pl. 68, fig. 4 (NM-E 98);
 Fig. 6 - *Pecopteris similis* STERNB. 1825, holotype, vol. I, 4, tent. p. 18, (NM-E 1498).

Fig. 1 - *Cycadites salicifolius* C.PRESL in Sternberg 1838, syntype, vol. II, 7/8, p. 195, pl. 40, fig. 2 (NM-G 6481);
Fig. 2 - *Cycadites salicifolius* C.PRESL in Sternberg 1838, lectotype, vol. II, 7/8, p. 195, pl. 40, fig. 1 (NM-E 169);
Fig. 3 - *Halymenites schnitzleinii* STERNB. 1833, holotype, vol. II, 5/6, p. 30, pl. 5, fig. 1 (NM-K 333);
Fig. 4 - *Caulerpites sertularia* STERNB. 1833, holotype, vol. II, 5/6, p. 21, pl. 5, fig. 2 (NM-K 334).

PLATE 48

Rotularia saxifragaeolia STERNB. 1825, holotype, vol. I, 4, p. 45, tent. p. 32, pl. 55, fig. 4 (NM-E 4734).

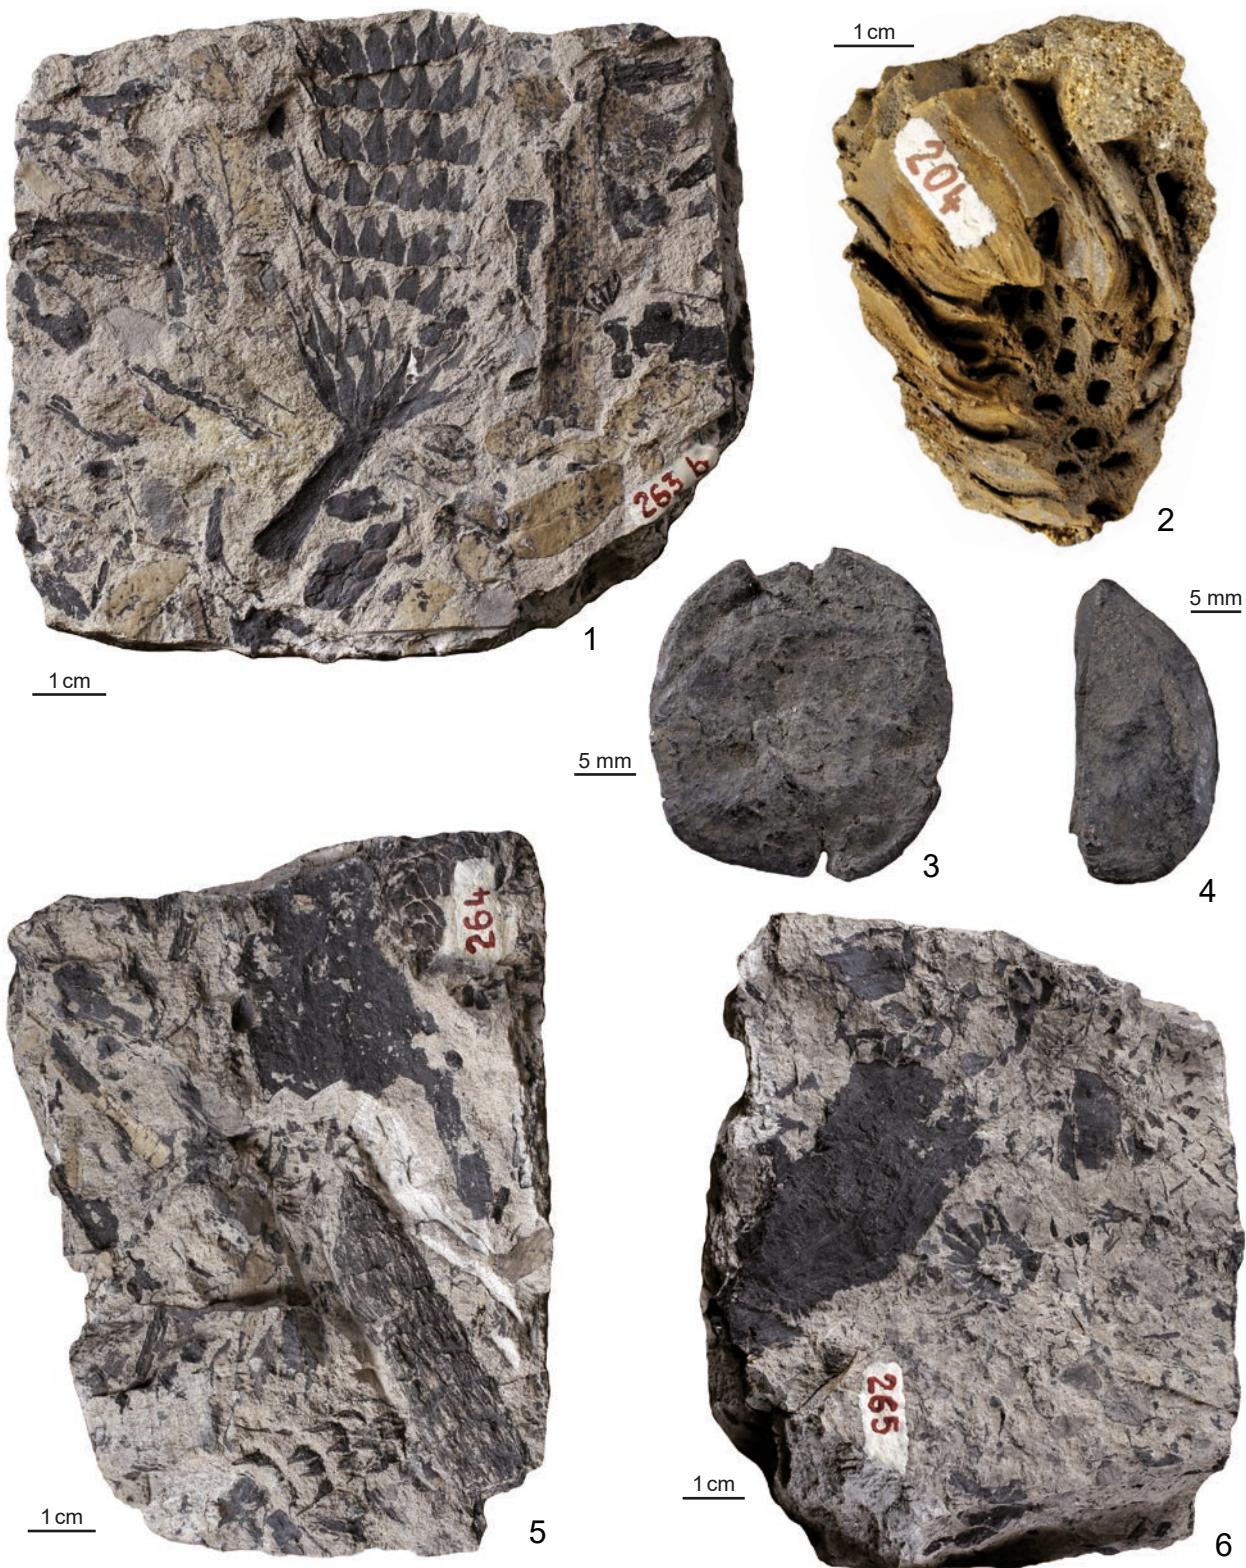

Fig. 1 - *Huttonia spicata* STERNB. 1837, lectotype, p. 69, pl. 1, fig. 1 (NM-E 74b);
 Fig. 2 - *Pinites striatus* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 202, pl. 52, fig. 2 (NM-E 186);
 Fig. 3 - *Carpolithes strychninus* STERNB. 1825, lectotype, vol. I, 4, p. 44, tent. p. 41, pl. 53, fig. 4 a (NM-E 181a);
 Fig. 4 - *Carpolithes strychninus* STERNB. 1825, syntype, vol. I, 4, p. 44, tent. p. 41, pl. 53, fig. 4 b (E 181b);
 Fig. 5 - *Huttonia spicata* STERNB. 1837, syntype, p. 69, pl. 1, fig. 2 (NM-E 75);
 Fig. 6 - *Huttonia spicata* STERNB. 1837, syntype, p. 69, pl. 1, fig. 4 (NM-E 76).

PLATE 50

Fig. 1 - *Lepidodendron selaginoides* STERNB. 1821, syntype, vol. I, 2, p. 26, tent. p. 31, pl. 17, fig. 1 (NM-E 4744);
Fig. 2 - *Chondrites targionii* (BRONGN.) STERNB. var. *flexuosus* STERNB. 1833, holotype, vol. II, 5/6, p. 26, pl. 9, fig. 3 (NM-E 18);
Fig. 3 - *Lepidodendron selaginoides* STERNB. 1821, syntype, vol. I, 2, p. 26, tent. p. 31, pl. 16, fig. 3 (NM-E 1683).

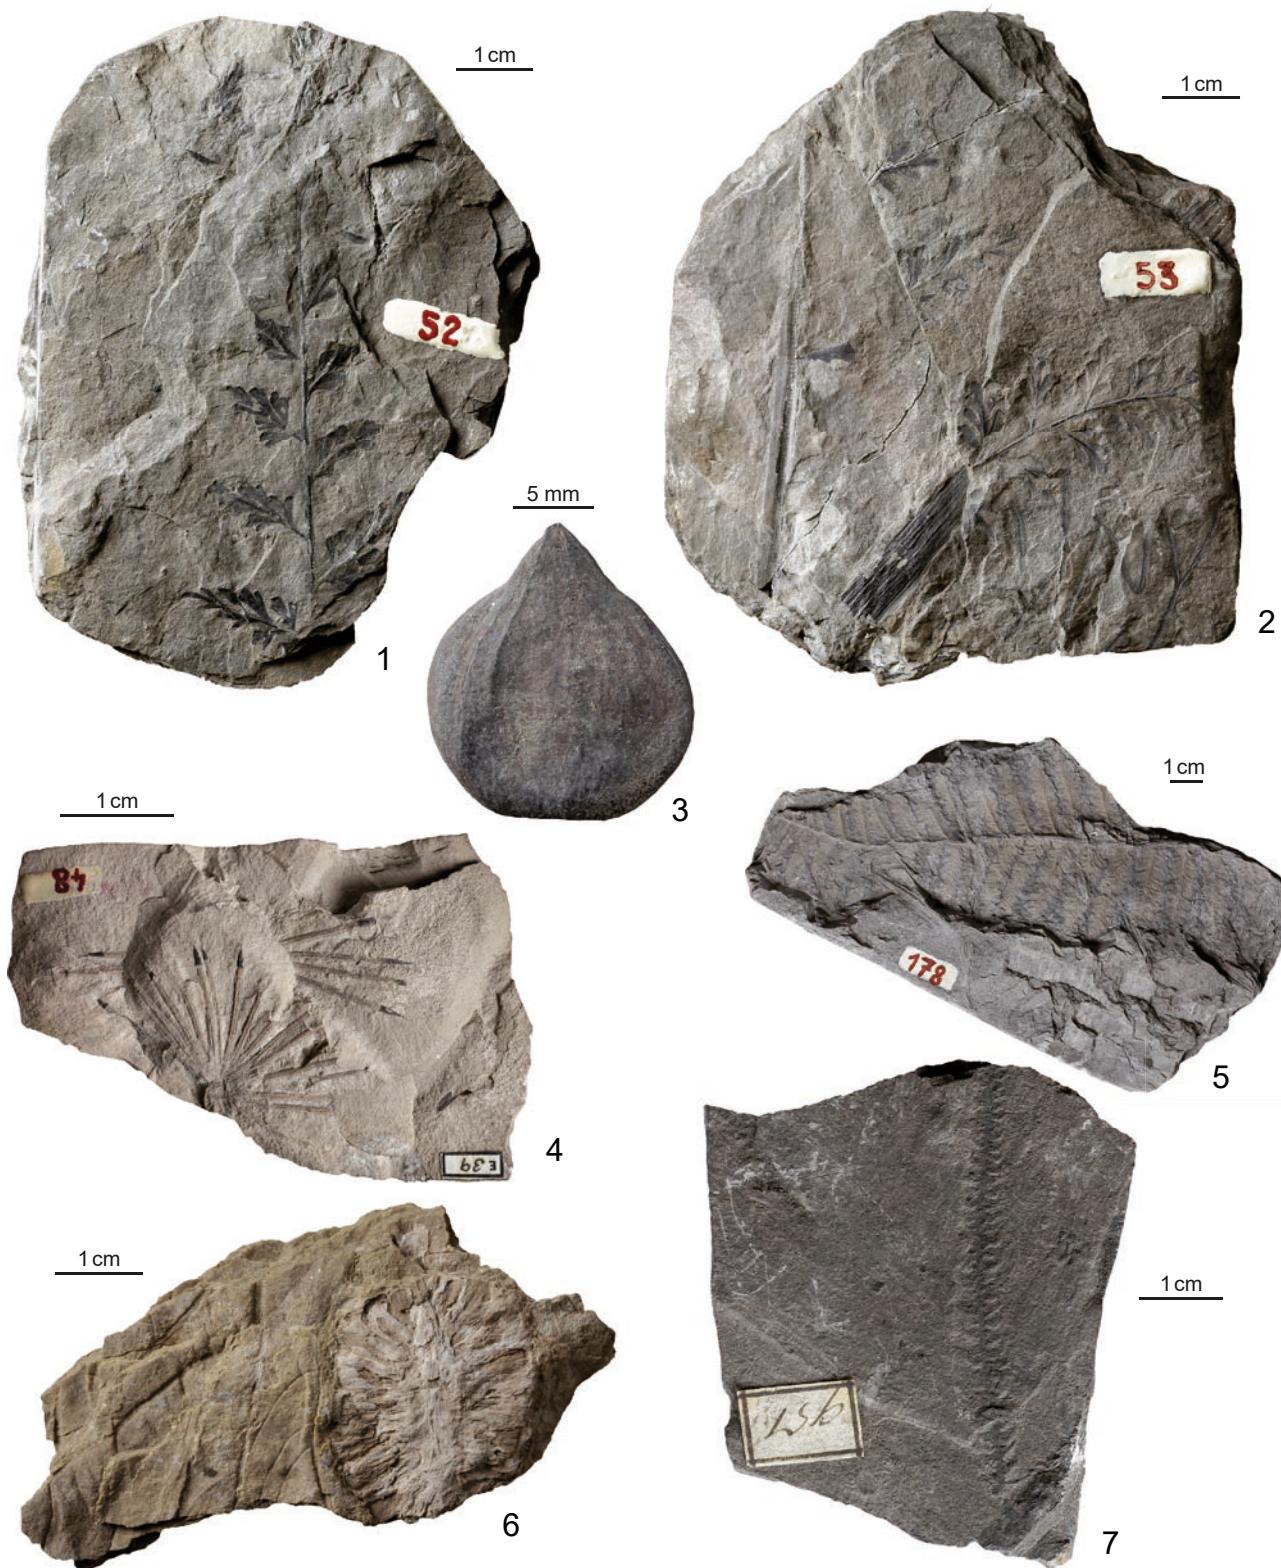

Fig. 1 - *Acrostichum silesiacum* STERNB. 1825, syntype, vol. I, 4, tent. p. 15, Sternberg 1821, vol. I, 2, p. 29, pl. 23, fig. 2a (NM-E 124);
 Fig. 2 - *Acrostichum silesiacum* STERNB. 1825, syntype, vol. I, 4, tent. p. 15, Sternberg 1821, vol. I, 2, p. 29, pl. 23, fig. 2b (NM-E 125);
 Fig. 3 - *Carpolithes subcordatus* STERNB. 1825, holotype, vol. I, 4, p. 44, tent. p. 41, pl. 53, fig. 6 (NM-E 184a);
 Fig. 4 - *Annularia spinulosa* STERNB. 1821, holotype, vol. I, 2, p. 32, pl. 19, fig. 4 (NM-E 39);
 Fig. 5 - *Pecopteris striata* C.PRESL in Sternberg 1838, syntype, vol. II, 7/8, p. 155, pl. 37, fig. 3 (NM-E 154);
 Fig. 6 - *Steinhaueria subglobosa* C.PRESL in Sternberg 1838, syntype, vol. II, 7/8, p. 202, pl. 57, fig. 1 (NM-G 2116);
 Fig. 7 - *Caulerpites schlotheimii* STERNB. 1833, syntype, vol. II, 5/6, p. 21, pl. 24, fig. 6 (NM-K 326).

PLATE 52

Fig. 1 - *Calamites verrucosus* STERNB. 1833, holotype, vol. II, 5/6, p. 50, pl. 13 (NM-E 5736);
Fig. 2 - *Muscites stolzii* STERNB. 1833, syntype, vol. II, 5/6, p. 38, pl. 17, fig. 2 (NM-G 7606);
Fig. 3 - *Muscites stolzii* STERNB. 1833, syntype, vol. II, 5/6, p. 38, pl. 17, fig. 3 (NM-E 24).

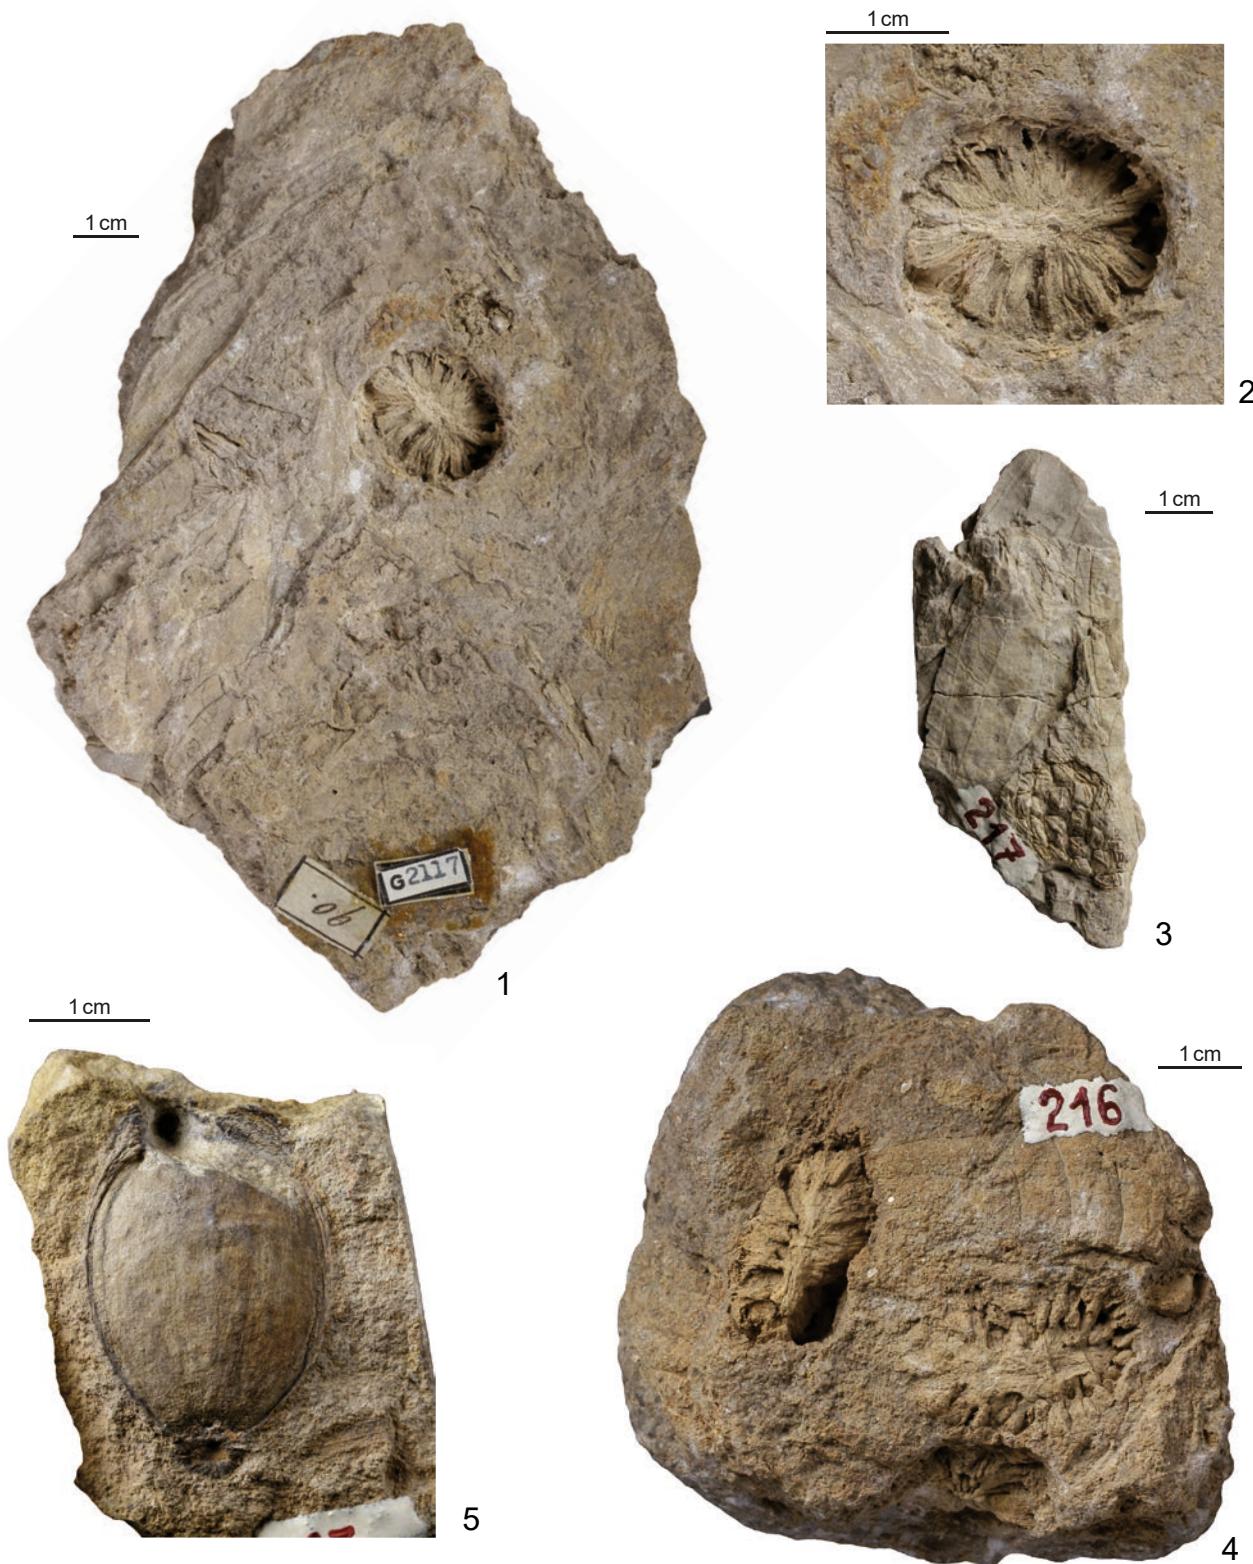

Fig. 1 - *Steinhauera subglobosa* C.PRESL in Sternberg 1838, lectotype, vol. II, 7/8, p. 202, pl. 57, fig. 3 (NM-G 2117);
 Fig. 2 - *Steinhauera subglobosa* C.PRESL in Sternberg 1838, lectotype, vol. II, 7/8, p. 202, pl. 57, fig. 3 (NM-G 2117 - detail);
 Fig. 3 - *Steinhauera subglobosa* C.PRESL in Sternberg 1838, syntype, vol. II, 7/8, p. 202, pl. 57, fig. 4 (NM-E 188);
 Fig. 4 - *Steinhauera subglobosa* C.PRESL in Sternberg 1838, syntype, vol. II, 7/8, p. 202, pl. 57, fig. 2 (NM-E 189);
 Fig. 5 - *Carpolithes umbilicatus* STERNB. 1825, holotype, vol. I, 4, tent. p. 41, Sternberg 1820, vol. I, 1, pl. 7, fig. 12 (NM-E 1205).

PLATE 54

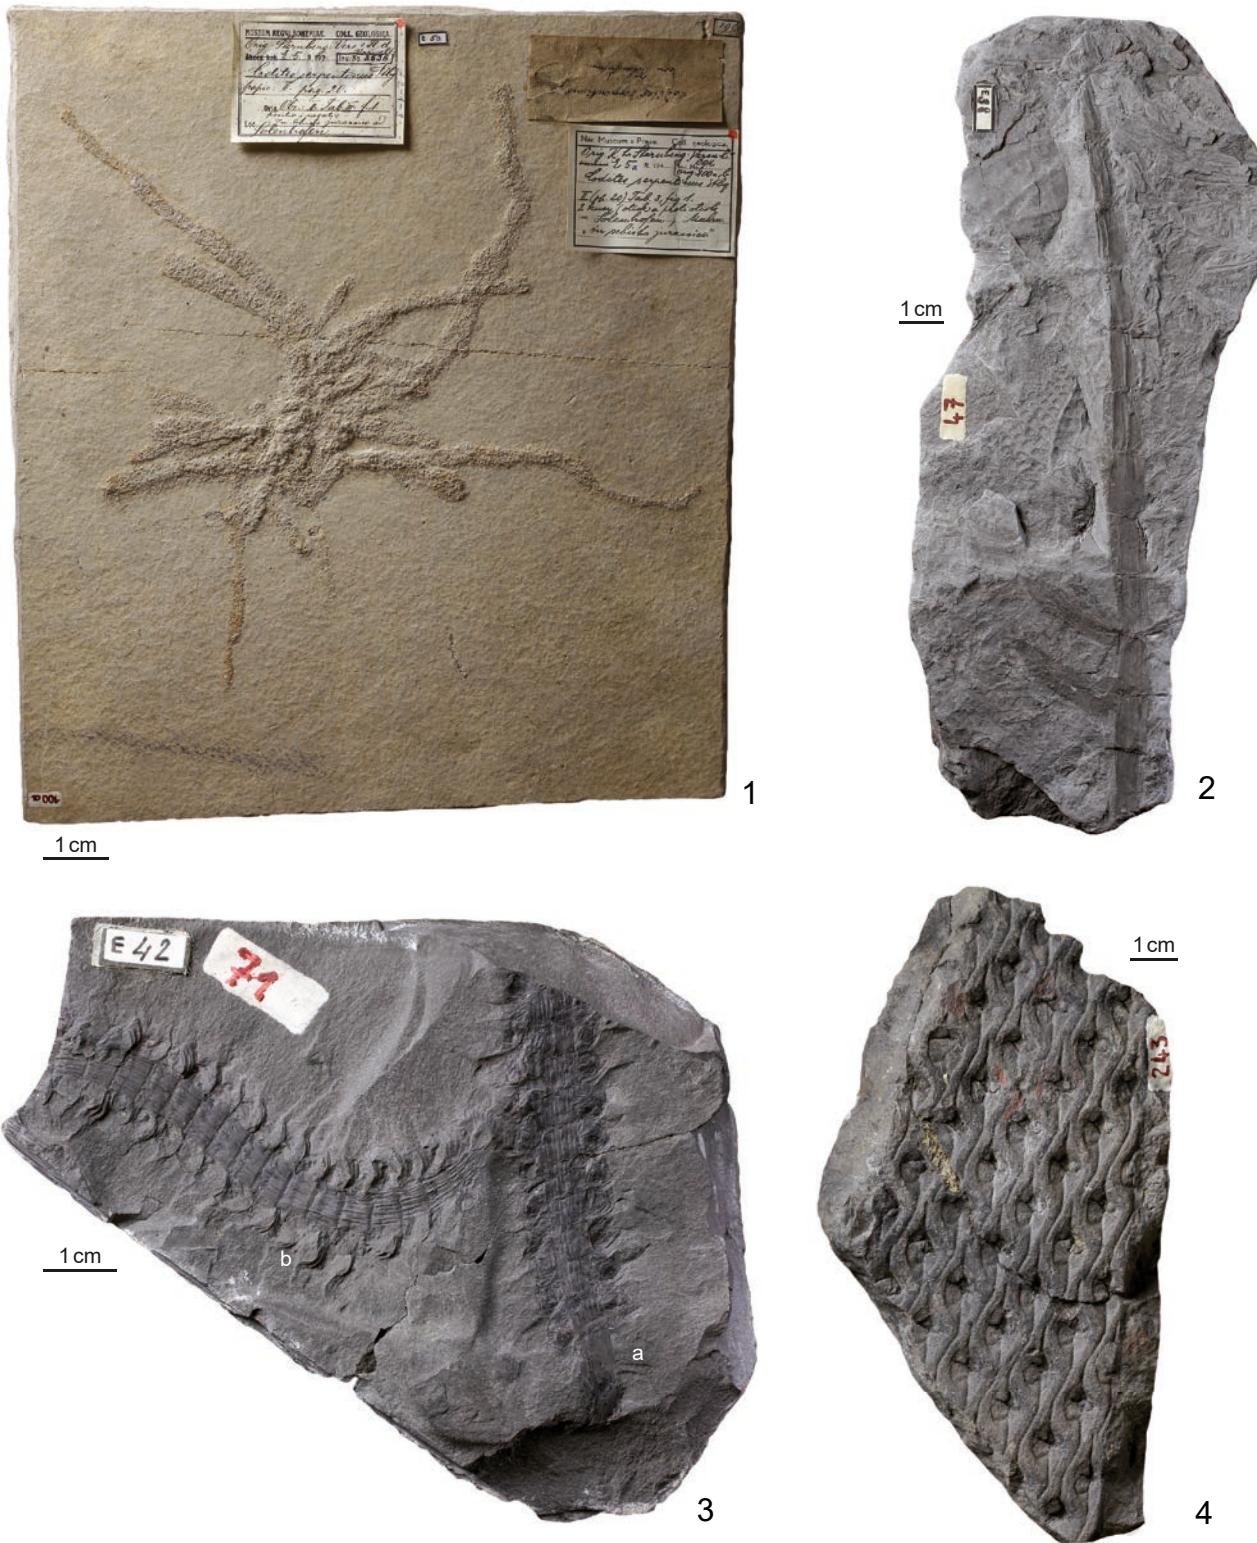

Fig. 1 - *Codites serpentinum* STERNB. 1833, holotype, vol. II, 5/6, p. 20, pl. 3, fig. 1 (NM-E 5);
 Fig. 2 - *Schlotheimia tenuifolia* STERNB. 1821, holotype, vol. I, 2, p. 32, pl. 19, fig. 2 (NM-E 38);
 Fig. 3a - *Brukmannia tuberculata* STERNB. 1825, lectotype, vol. I, 4, tent. p. 29, pl. 45, fig. 2 (NM-E 42 right);
 Fig. 3b - *Brukmannia tuberculata* STERNB. 1825, syntype, vol. I, 4, tent. p. 29, pl. 45, fig. 2 (NM-E 42 left);
 Fig. 4 - *Lepidodendron veltheimii* STERNB. 1825, holotype, vol. I, 4, p. 43, tent. p. 13, pl. 52, fig. 3 (NM-E 1847).

Fig. 1 - *Cystoseirites taxiformis* STERNB. 1833, syntype, vol. II, 5/6, p. 35, Sternberg 1825, vol. I, 4, pl. 44, fig. 1 (NM-E 170);
 Fig. 2 - *Juglandites ventricosus* STERNB. 1825, syntype, vol. I, 4, p. 40, tent. p. 40, (NM-E 182g);
 Fig. 3 - *Juglandites ventricosus* STERNB. 1825, lectotype, vol. I, 4, p. 40, tent. p. 40, pl. 53, fig. 5b (NM-E 182b);
 Fig. 4 - *Chondrites targionii* (BRONGN.) STERNB. var. *expansus* STERNB. 1833, holotype, vol. II, 5/6, p. 26, pl. 9, fig. 4 (NM-E 19);
 Fig. 5 - *Cystoseirites taxiformis* STERNB. 1833, lectotype, vol. II, 5/6, p. 35, pl. 18, fig. 2 (NM-E 25);
 Fig. 6 - *Aphlebia tenuiloba* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 113, pl. 58, fig. 2 (NM-E 163).

PLATE 56

Fig. 1 - *Lepidodendron trigonum* STERNB. 1820, holotype, vol. I, 1, p. 21, tent. p. 23, pl. 11, fig. 1 (NM-E 81);
Fig. 2 - *Alethopteris vulgatior* STERNB. 1825, syntype, vol. I, 4, p. 44, tent. p. 21, pl. 53, fig. 2 (NM-E 136);

Fig. 3 - *Cystoseirites taxiformis* STERNB. 1833, syntype, vol. II, 5/6, p. 35, pl. 18, fig. 3 (NM-E 26);

Fig. 4 - *Lepidodendron volkmannianum* STERNB. 1825, syntype vol. I, 4, p. 44, tent. p. 10, pl. 53, fig. 3a,b (NM-E 84);

Fig. 5 - *Sphenopteris tenuissima* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 126, pl. 41, fig. 2a,b (NM-E 1499);

Fig. 6 - ?*Lepidodendron* sp.; Sternberg 1820, vol. I, 1, p. 20, pl. 8, fig. 25 (NM-E 78).

Fig. 1 - *Palmacites verrucosus* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 29, pl. 42, fig. 3 (NM-E 175);
 Fig. 2 - *Carpolithes venosus* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 208, pl. 58, figs 18, 19 (NM-E 196a);
 Fig. 3 - *Carpolithes venosus* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 208, pl. 58, fig. 20 (NM-E 196c);
 Fig. 4 - *Carpolithes venosus* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 208, pl. 58, figs 18, 19 (NM-E 196b).

PLATE 58

Fig. 1 - *Halymenites subarticulatus* STERNB. 1833, holotype, vol. II, 5/6, p. 29, pl. 4, fig. 2 (NM-E 7);
Fig. 2 - *Phyllites trilobatus* STERNB. 1825, holotype, vol. I, 4, p. 42, pl. 50, fig. 2 (NM-G 2115);
Fig. 3 - *Pecopteris* sp. indet.; Sternberg 1820, vol. I, 1, p. 20, pl. 8, fig. 24 (NM-E 121a);
Fig. 4 - *Carpolithes tessellatus* STERNB. 1825, holotype, vol. I, 4, tent. p. 41, Sternberg 1820, vol. I, 1, pl. 7, fig. 20 (NM-E 4748);
Fig. 5 - *Calamites undulatus* STERNB. 1825, holotype, vol. I, 4, tent. p. 26, Sternberg 1833, vol. II, 5/6, pl. 1, fig. 2 (NM-E 2338).

 Fig. 2 - *Odontopteris undulata* STERNB. 1827b, holotype, p. 340, Sternberg 1833, vol. II, 5/6, p. 78, pl. 25, fig. 81(NM-E 168);
 Fig. 3 - *Halymenites varius* STERNB. 1833, holotype, vol. II, 5/6, p. 29, pl. 2, fig. 4 (NM-E 3);
 Fig. 4 - *Equisetites* sp.; C. Presl in Sternberg, 1838, vol. II, 7/8, pl. 30, fig. 4 (NM-E 61a).

PLATE 60

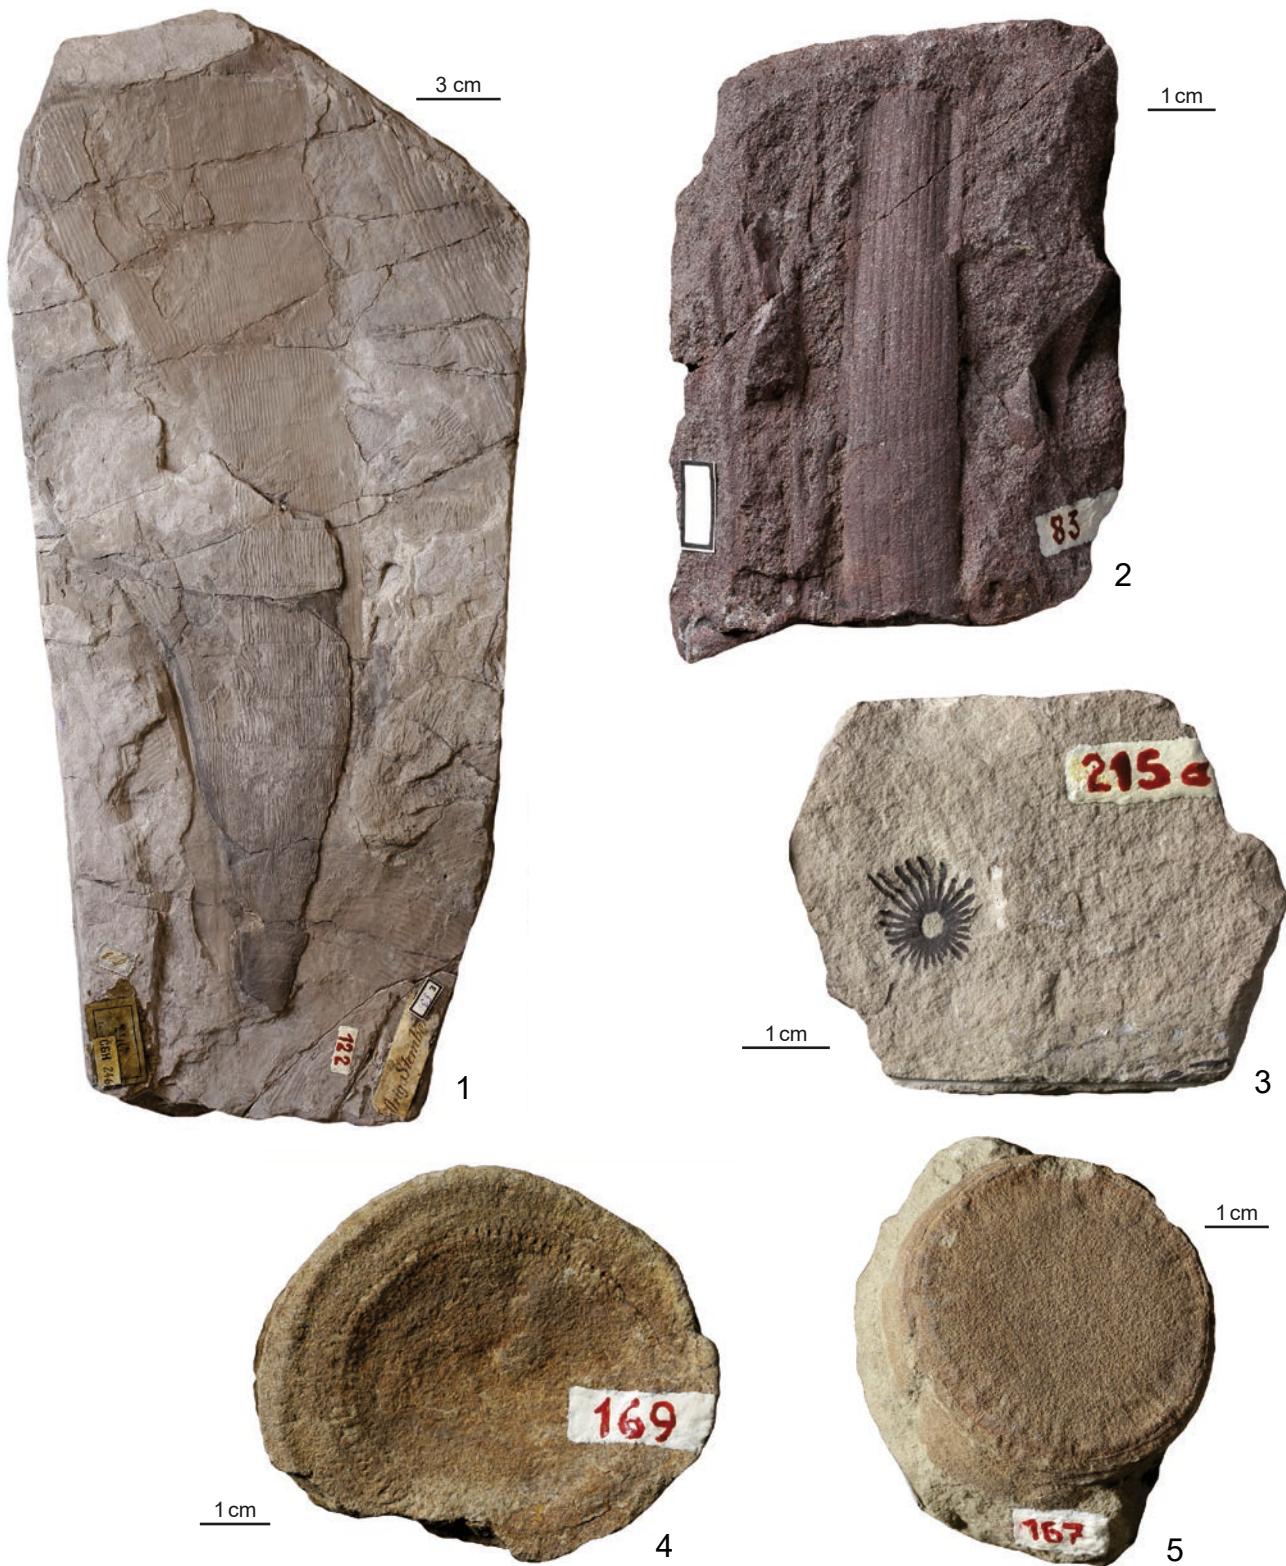

Fig. 1 - *Calamites varians* STERNB. 1833, syntype, vol. II, 5/6, p. 50, pl. 12 (NM-E 53);

Fig. 2 - *Calamites* sp. indet.; Sternberg, 1825, vol. I, 4, pl. 53, fig. 1 (NM-E47);

Fig. 3 - *Calamites* sp. indet.; Corda in Sternberg, 1838, vol. II, 7/8, pl. 65, figs 13, 14 (NM-E 73a);

Fig. 4 - *Euisetites* sp. indet.; C. Presl in Sternberg, 1838, vol. II, 7/8, pl. 31, fig. 6 (NM-E 67);

Fig. 5 - *Calamites* sp. indet.; C. Presl in Sternberg, 1838, vol. II, 7/8, pl. 31, fig. 4 (NM-E 65).

Fig. 1 - *Lepidodendron undulatum* STERNB. 1820, holotype, vol. I, 1, p. 23, tent. p. 23, pl. 10, fig. 2 (NM-E 77);
 Fig. 2 - *Equisetites* sp.; C. Presl in Sternberg 1838, vol. II, 7/8, pl. 30, fig. 5 (NM-E 62);
 Fig. 3 - *Neuropterus acutifolia* BRONGN.; Sternberg 1833, vol. II, 5/6, p. 70, pl. 19, fig. 4 (NM-E 143);
 Fig. 4 - *Equisetites conicus* STERNB.; C. Presl in Sternberg 1838, vol. II, 7/8, pl. 30, fig. 1 (NM-E 59);
 Fig. 5 - *Carpolithes umbonatus* STERNB. 1825, holotype, vol. I, 4, tent. p. 41, Sternberg 1820, vol. I, 1, pl. 9, fig. 2 (NM-E 178);
 Fig. 6 - *Sphenopteris elegans* (BRONGN.) STERNB.; Sternberg 1833, vol. II, 5/6, pl. 20, fig. 3 (NM-E 1405).

PLATE 62

Fig. 1 - *Lepidodendron aculeatum* STERNB.; Sternberg, 1821, vol. I, 2, p. 25, tent. p. 31, pl. 14, figs 1, 2 (NM-E 2471) medial part of the figured specimen;

Fig. 2 - *Lepidodendron aculeatum* STERNB.; Sternberg, 1821, vol. I, 2, p. 25, tent. p. 31, pl. 14, figs 1, 2 (NM-E 2472) terminal part of the figured specimen;

Fig. 3 - *Lepidodendron aculeatum* STERNB.; Sternberg, 1821, vol. I, 2, p. 25, tent. p. 31, pl. 14, figs 1, 2 (NM-E 2470) basal part of the figured specimen.

Lepidodendron sp. indet. (*Knorria*); Sternberg, 1825, vol. I, 4, pl. 5, fig. 1 (NM-E 4739).

PLATE 64

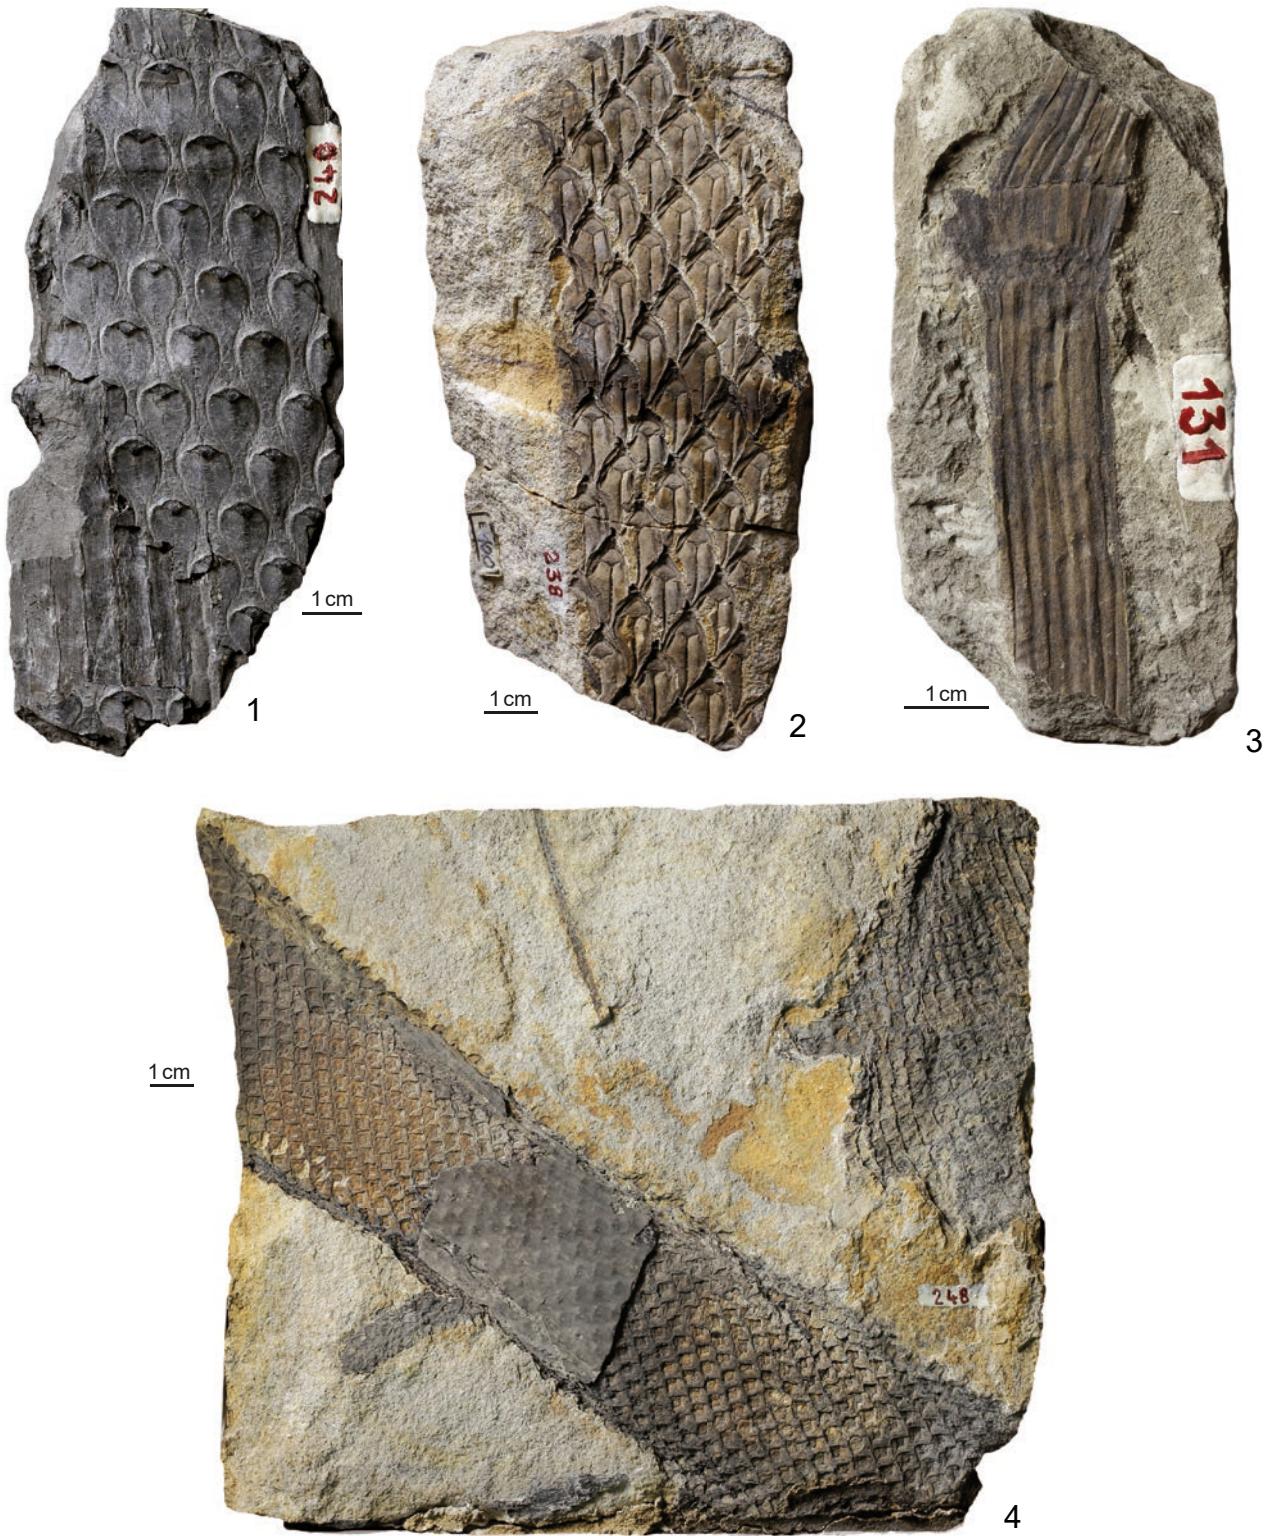

Fig. 1 - *Lepidodendron volkmannianum* STERNB.; C. Presl in Sternberg, 1838, vol. II, 7/8, p. 180, pl. 68, fig. 8 (NM-E 1822);
Fig. 2 - *Sagenaria obovata* (STERNB.) C.PRESL in Sternberg 1838, vol. II, 7/8, p. 178, pl. 68, fig. 6 (NM-E 100);
Fig. 3 - *Equisetites* sp.; Sternberg 1833, vol. II, 5/6, pl. 16, fig. 9 (NM-E 57);
Fig. 4 - *Lepidodendron dichotomum* STERNB.; Sternberg, 1838, vol. II, 7/8, p. 214, pl. A, fig. 16 (NM-E 4741).

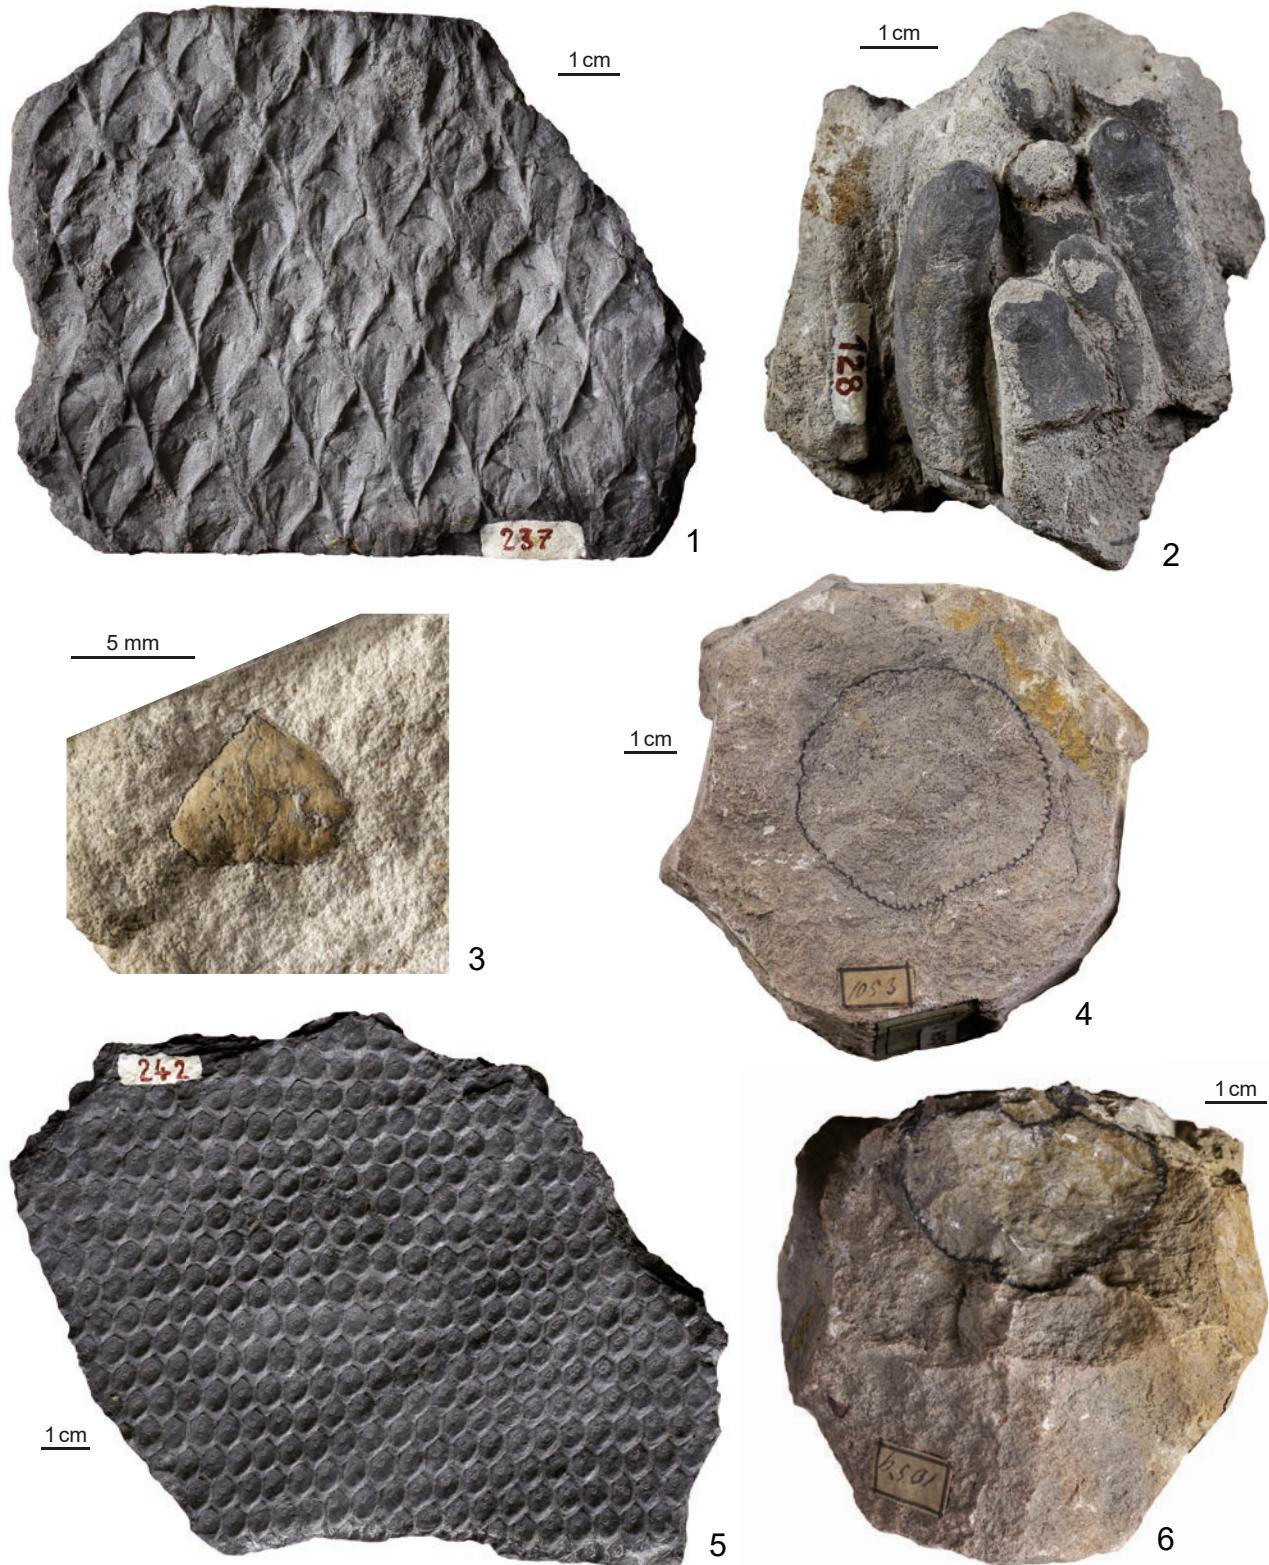

Fig. 1 - *Sagenaria crenata* (STERNB.) C.PRESL in Sternberg 1838, vol. II, 7/8, p. 178, pl. 68, fig. 5 (NM-E 99);
 Fig. 2 - *Variolaria ficoides* STERNB.; Sternberg, 1838, vol. II, 7/8, pl. 15, fig. 4 (NM-E 86);
 Fig. 3 - *Carpolithes* sp. indet.; Sternberg 1825, vol. I, 4, pl. 7, fig. 9 (NM-E 1202);
 Fig. 4 - *Equisetites* sp.; Corda in Sternberg 1838, vol. II, 7/8, pl. 56, fig. 10 (NM-E 239) – part of the figured specimen;
 Fig. 5 - *Aspidiaria variolata* (STERNB.) C.PRESL in Sternberg 1838, vol. II, 7/8, p. 181, pl. 68, fig. 12 (NM-E 102);
 Fig. 6 - *Equisetites* sp.; Corda in Sternberg 1838, vol. II, 7/8, pl. 56, fig. 10 (NM-E 238) – part of the figured specimen.

PLATE 66

Fig. 1 - *Cordaitanthus communis* FEISTM.; sine nomine, Sternberg 1820, vol. I, 4, pl. 26, fig. 2 (NM-E 180);
 Fig. 2 - *Flabellaria borassifolia* STERNB.; Sternberg 1825, vol. I, 4, tent. p. 34, pl. 41, fig. 1 (NM-E 4749);
 Fig. 3 - *Filicites* sp.; Sternberg 1821, vol. I, 2, pl. 25, fig. 3 (NM-E 152) – fragment of the figured specimen;
 Fig. 4 - *Filicites* sp.; Sternberg 1821, vol. I, 2, pl. 25, fig. 3 (NM-E 126b) – fragment of the figured specimen;
 Fig. 5 - *Doliostrobus taxiformis* (STERNB.) KVAČEK; sine nomine, Sternberg 1825, vol. I, 4, p. 40, pl. 44, fig. 5 (NM-E 173);
 Fig. 6 - *Sphenopteris elegans* (BRONGN.) STERNB.; Sternberg 1833, vol. II, 5/6, pl. 20, fig. 4 (NM-E 1406).

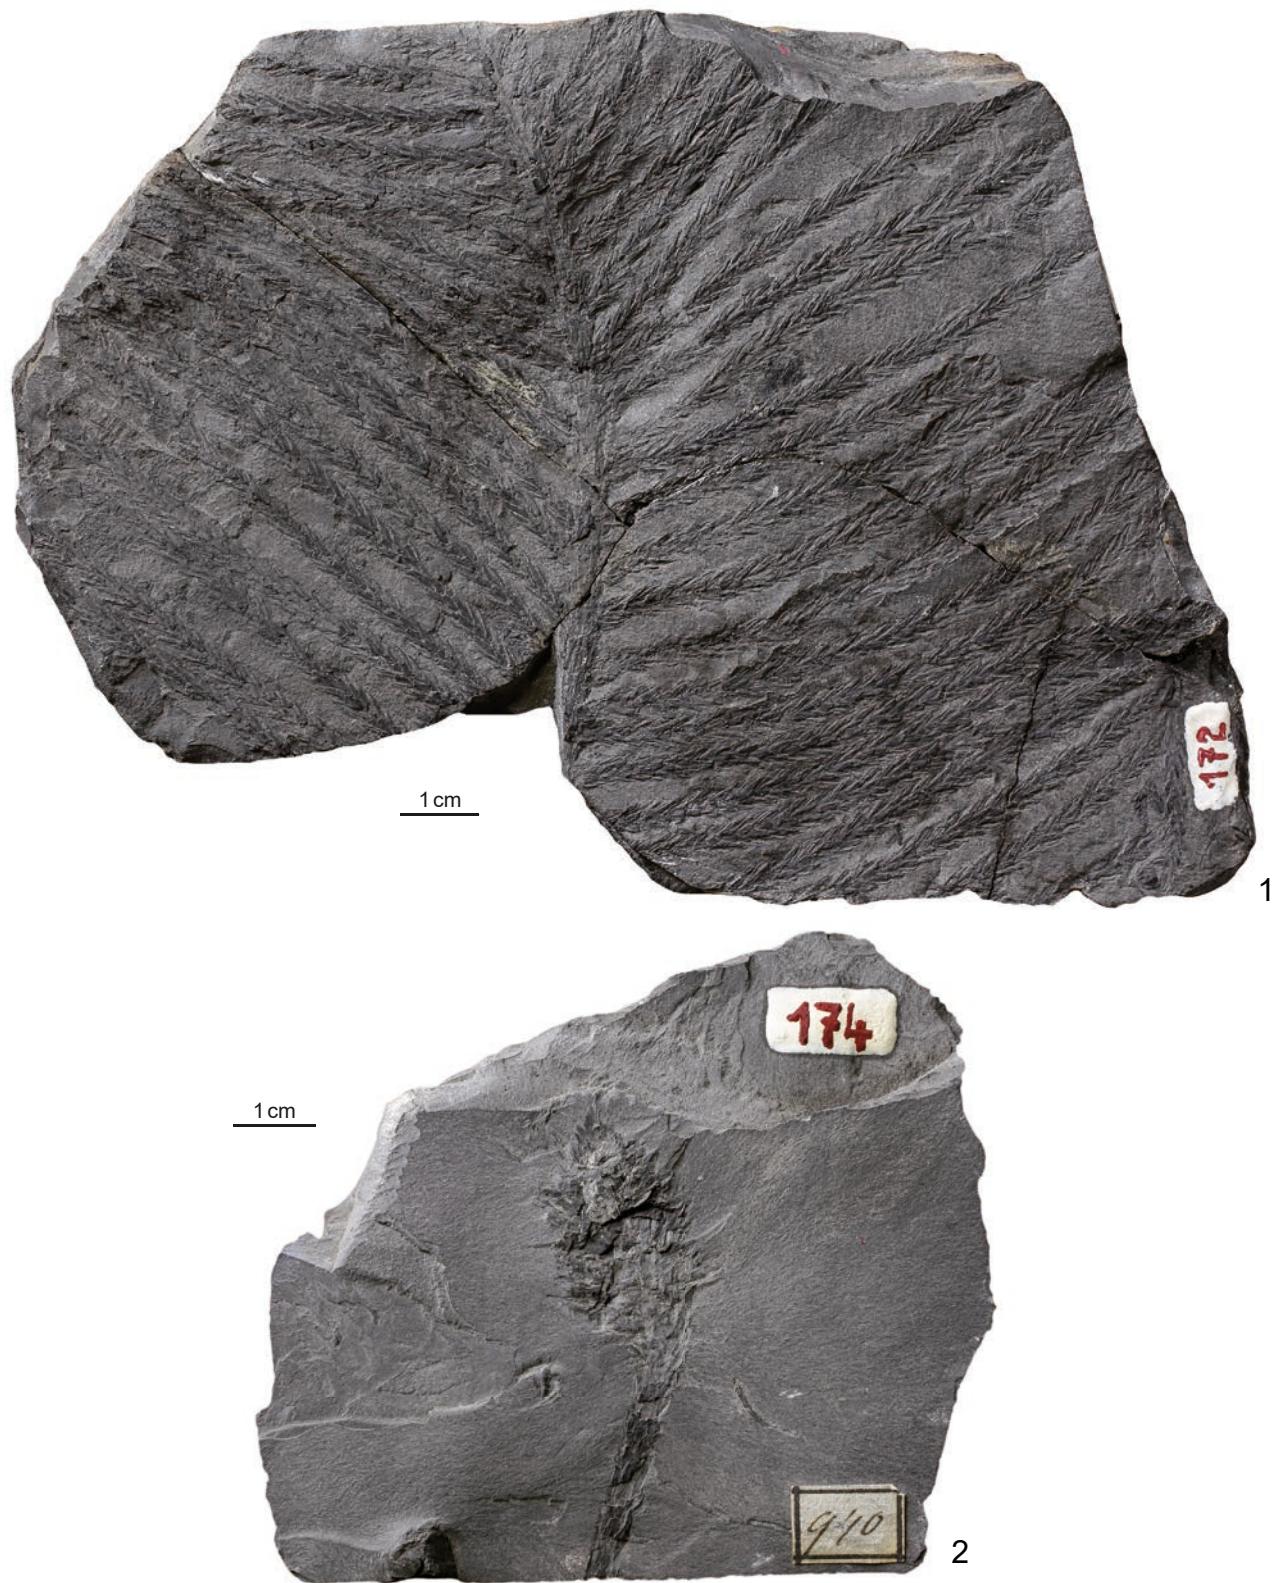

Fig. 1 - *Lycopodites bronii* (STERNB.) C.PRESL in Sternberg, 1838, vol. II, 7/8, pl. 34, fig. 1 (NM-E 1701);
Fig. 2 - *Lycopodites bronii* (STERNB.) C.PRESL in Sternberg, 1838, vol. II, 7/8, pl. 34, fig. 2A (NM-E 87).

PLATE 68

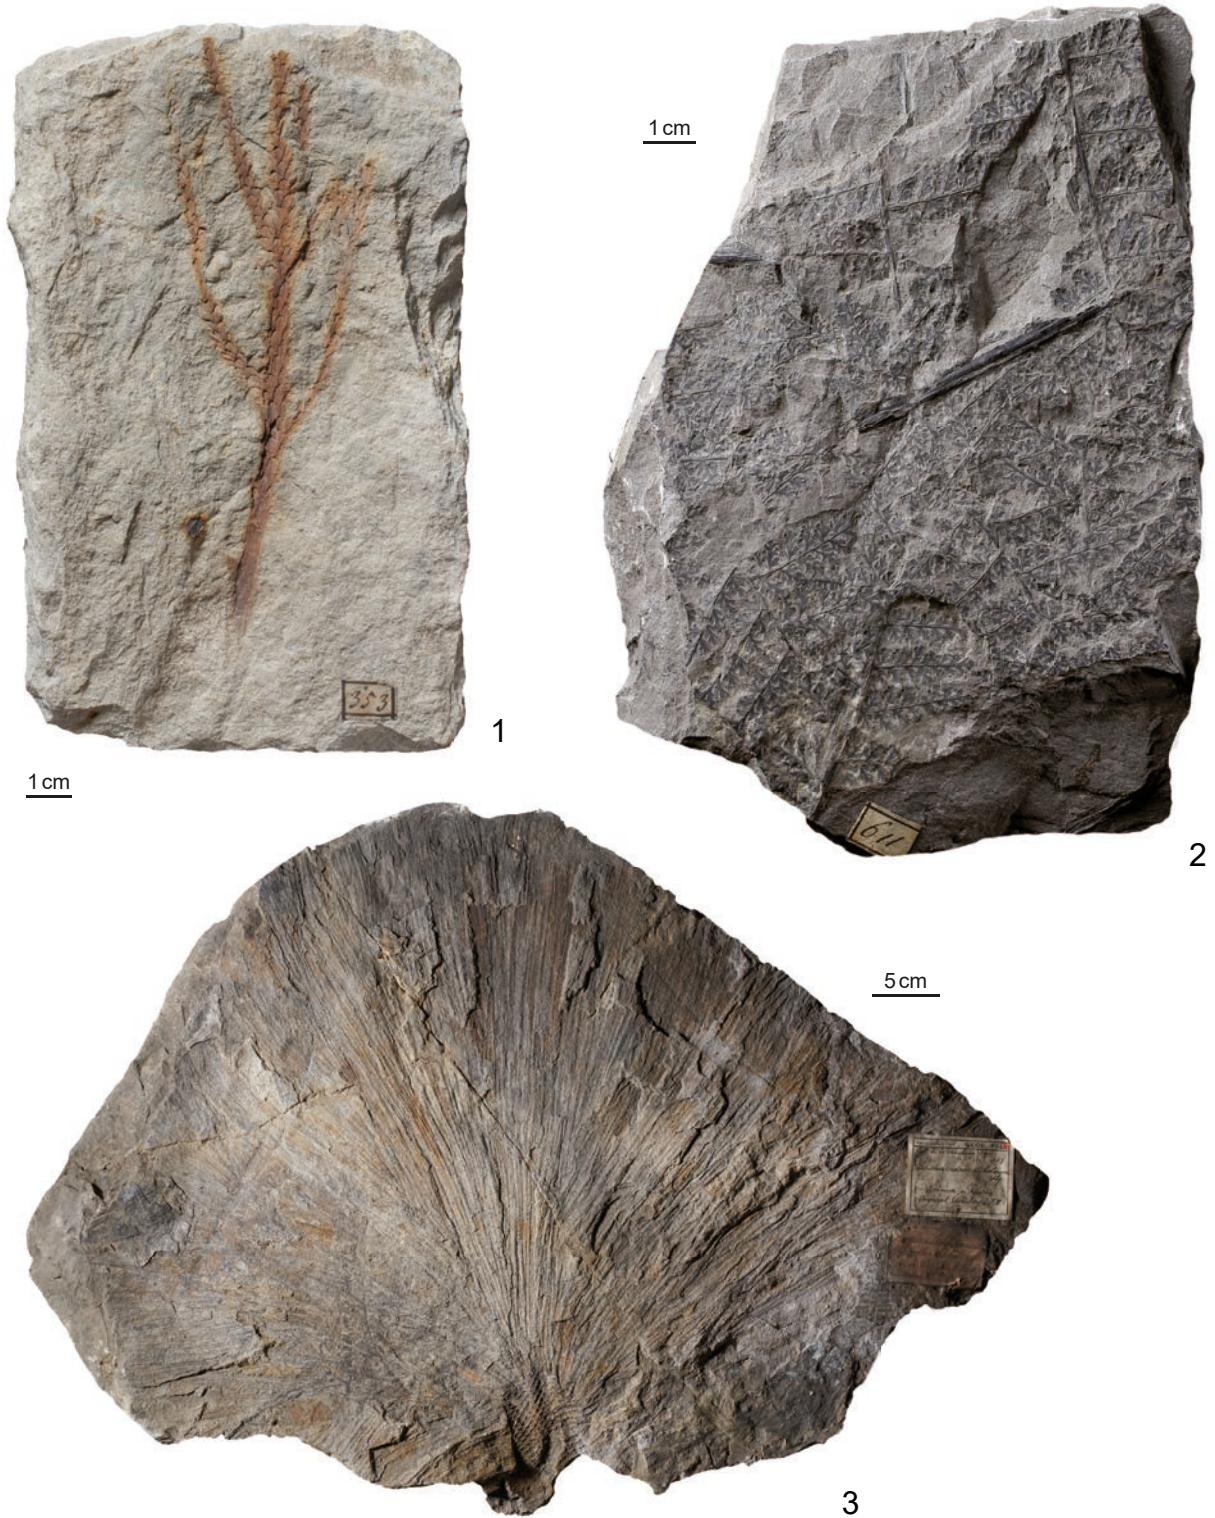

Fig. 1 - *Thuites alienus* STERNB. 1825, lectotype, vol. I, 4, p. 40, tent. p. 38, pl. 45, fig. 1 (NM-F 3675);
Fig. 2 - *Sphenopteris conferta* STERNB. 1825, holotype, vol. I, 4, tent. p. 16 (NM-K 425);
Fig. 3 - *Lepidodendron dichotomum* STERNB. 1820, syntype, vol. I, 1, p. 19, tent. p. 23, pl. 3 (NM-E 7647).

Fig. 1 - *Pecopteris dubia* STERNB. 1825, holotype, vol. I, 4, tent. p. 20 (NM-E 6232);
 Fig. 2 - *Ulodendron ellipticum* C.PRESL in Sternberg 1838, holotype, vol. II, 7/8, p. 186, pl. 45, fig. 2 (NM-E 6000);
 Fig. 3 - *Alethopteris longifolia* STERNB. in Göppert 1836, syntype, p. 308 (NM-E 1504);
 Fig. 4 - *Alethopteris longifolia* STERNB. in Göppert 1836, syntype, p. 308 (NM-E 4752);
 Fig. 5 - *Lycopodiolites lignitum* STERNB. 1825, vol. I, 4, tent. p. 8 (NM-F 636).

PLATE 70

Fig. 1 - *Alethopteris longifolia* STERNB. in Göppert 1836, syntype, p. 308 (NM-E 4905);
Fig. 2 - *Alethopteris longifolia* STERNB. in Göppert 1836, syntype, p. 308 (NM-E 4907);
Fig. 3 - *Rotularia marsiliaefolia* STERNB. 1821, syntype, vol. I, 2, pp. 30, 33 (NM-K 375);
Fig. 4 - *Alethopteris longifolia* STERNB. in Göppert 1836, syntype, p. 308 (NM-E 4906);
Fig. 5 - *Cystoseirites nutans* STERNB. 1833, holotype, vol. II, 5/6, p. 35, pl. 8, fig. 1 (NM-T 3437).

Fig. 1 - *Syringodendron organum* STERNB. 1820, holotype, vol. I, 1, pp. 22, 24, pl. 13, fig. 1 (NM-E 7641);
 Fig. 2 - *Caulerpites pteroides* STERNB. 1833, holotype, vol. II, 5/6, p. 21, pl. 24, fig. 5 (NM-K 404);
 Fig. 3 - *Pitus primaeva* WITHAM.; Corda in Sternberg, 1838, vol. II, 7/8, p. 212, pl. 60, fig. 5 (NM-E 4631);
 Fig. 4 - *Delessertites ovatus* STERNB. 1833, syntype, vol. II, 5/6, p. 32, pl. 10, fig. 2 (NM-K 348);
 Fig. 5 - *Caulerpites princeps* STERNB. 1833, syntype, vol. II, 5/6, p. 22 (NM-K 349).
